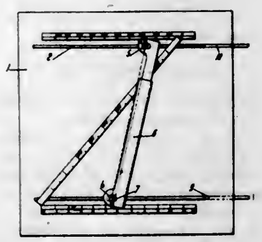
1. A vehicle wheel including a hub formed of sections shiftable inwardly upon each other, spokes carried by the hub sections respectively, a felly supported by the spokes, a boxing extending through the hub, means adjustable upon the boxing for shifting the hub sections inwardly upon each other to expand the felly, and means carried by said first mentioned means and coacting with the hub sections for centering the boxing with respect to the hub.

1,350,618. APPARATUS FOR MAKING TEMPERED BLADES. CHARLES NAPIER, Springfield, Mass., assignor to Napier Saw Works Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1919. Serial No. 269,598. 21 Claims. (Cl. 266—3.)

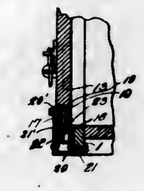


1. Apparatus for treating a metal article comprising means to move such article in a certain direction, means in the path of said article for raising its temperature above the hardening reaction point, means in the path of said article for quenching it, and means in the path of said article for drawing the temper of the body region of said article and for gradually drawing the temper of an edge region thereof, whereby to spring-temper the body and graduate the temper of the edge region from a spring temper within to hardness at the edge.

1,350,619. CARTRIDGE-MAGAZINE. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,286. 11 Claims. (Cl. 42—7.)

11. A cartridge magazine adapted to be detachably fitted to a firearm, comprising a sheet metal case having a wall thereof bent in the form of a dovetail guide adapted to interfit with a similarly shaped guide in the firearm.

1,350,620. MEAN-SPEED INDICATOR. HENRI PETIT, Ermont, France. Filed Sept. 11, 1916. Serial No. 119,489. 2 Claims. (Cl. 235—61.)



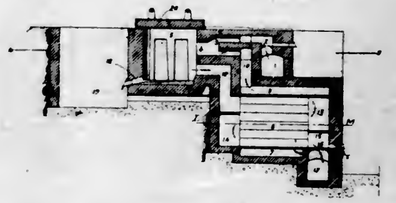
1. In an apparatus for indicating the mean speed of a rotating part, a pair of parallel scales, a scale extending diagonally between the parallel scales, and a movable bar intersecting the diagonal scale and movable along the parallel scales, the point of intersection of the movable bar with the diagonal scale indicating the mean speed of the rotating part, the points of contact of the movable bar with the parallel scales moving, one in proportion to the time, and the other to the distance of rotation of the rotating part.

1,350,621. PROCESS FOR TREATING FIBERS. JOHN H. PICKUP, Philadelphia, Pa., assignor of one-half to George A. Wilson, New York, N. Y. Filed Mar. 19, 1919. Serial No. 283,464. 4 Claims. (Cl. 92—5.)

1. The method of preparing vegetable fibers for spinning which consists in allowing the fiber to stand and ferment in a hot bath for an extended period, then entering the fiber into a solution of slack lime, then boiling the fiber under pressure, and subsequently subjecting the fiber alternately to acid and alkaline baths.

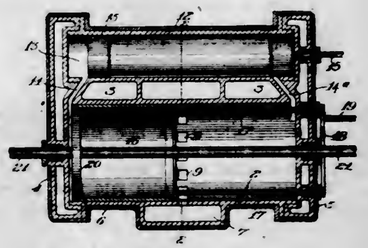
1,350,622. ROLLER-DOOR EQUIPMENT. MENZO A. RUTENBER, Collinsville, Okla. Filed Apr. 25, 1918. Serial No. 230,834. 1 Claim. (Cl. 20—22.)

A sliding door construction of the class described comprising a support, a door, an upper hanger frame carried by said support, rollers carried by said door and adapted to work upon said upper hanger, said door provided with pockets formed in the lower edge thereof, casings fitted within said pockets, a roller mounted within each casing and projecting below the outer edge of said casings, a substantially Z-shaped shield plate extending across the bottom edge of the door and having apertures formed therein through which said last mentioned rollers project, said substantially Z-shaped plate also extending upwardly against the outer face of the door and projecting downwardly along its opposite edge and adapted to normally lie snugly against the outer face of said support, a plurality of brackets carried by said support and provided with outwardly extending end portions, a substantially inverted L-shaped plate secured to the outer faces of said brackets and having an inwardly extending flange constituting a track for receiving said last mentioned rollers, and said downwardly extending flange of said Z-shaped plate projecting down below the upper face of said substantially inverted L-shaped plate for a considerable distance.



1,350,623. SHADE AND CURTAIN FIXTURE. FREDERICK W. SCHRNMEYER, West Albany, N. Y. Filed Aug. 6, 1919. Serial No. 315,715. 2 Claims. (Cl. 156—24.)

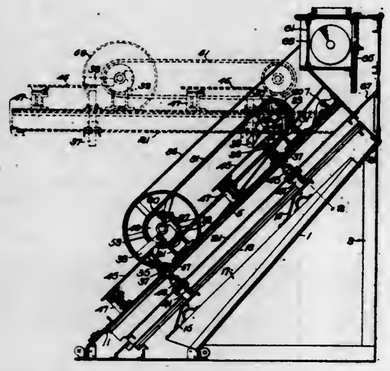
1. A combined shade roller and curtain pole support comprising a bracket for attachment to a window casing, said bracket including an inwardly projecting bar having a longitudinal slot provided with spaced notches in the opposed edges thereof, and a shade roller bracket provided at its inner end with a relatively fixed stud consisting of a head and a shank, the shank being disposed at right angles to the plane of the bar and adjustable along the slot therein to seat in any one of said notches with the head bridging the notch in which the shank is seated.



2. In a device of the class described, duplicate brackets each comprising a foot to be secured to the edge of the window casing, and a bar projecting at right angles to the plane of a foot and slotted throughout its length, the upper and lower edges of the slot having notches out of register throughout its length but with the two innermost notches in register; of a pair of fixtures each comprising a body, a base plate secured across the inner edge of the same and hooked to the rear at its upper end, and a relatively fixed stud projecting from the rear face of the base plate and having a T-head disposed transversely to the length of said plate, the head being of a size to pass through said alined notches and the shank of the stud disposed to engage one of the notches in the lower edge of the slot when the hook engages over the upper edge of the bar, the head bridging the notch in which the shank is seated.

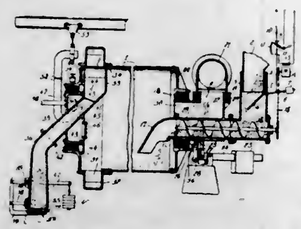
1,350,624. REGENERATIVE FURNACE. CHARLES STEIN, Paris, France, assignor to Societe Ch. M. Stein & Cie., Paris, France, a Corporation of France. Filed Apr. 30, 1919. Serial No. 293,820. 3 Claims. (Cl. 263—15.)

1. A vertical furnace of the class described, comprising a hearth, means for admitting and burning therein a combustible mixture of air and gas, means for exhausting the products of combustion therefrom, a regenerator through which the incoming air passes and through which the outgoing products of combustion pass for heating said air, and a smoke collector for the final exhausting of the products of combustion provided with means for regulating said exhaust.



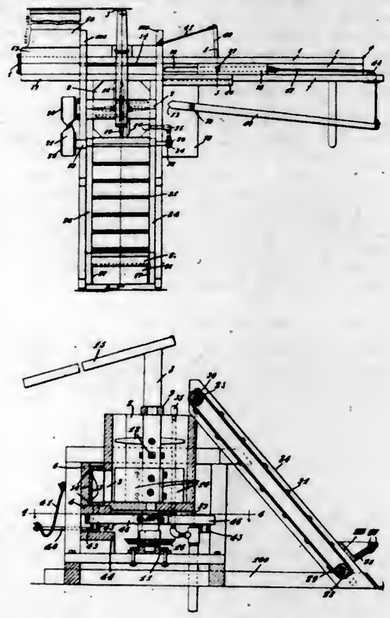
1,350,625. STEAM-ENGINE. HENRY A. STRINGFELLOW and ELLIS W. TEMPLIN, Rochester, N. Y. Filed Oct. 11, 1915. Serial No. 55,172. 3 Claims. (Cl. 121—125.)

1. In a steam engine, the combination with a cylinder and a piston operating therein, said cylinder being provided with inlet ports at each end and an intermediate exhaust port, of a sleeve arranged to reciprocate in the



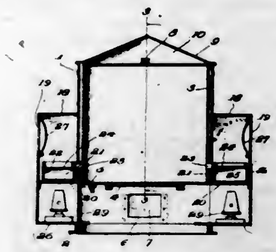
cylinder between the walls of the latter and the piston and to open and close the exhaust port upon each reciprocation of the piston and additional means for opening and closing the intake ports.

1,350,626. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1917. Serial No. 182,407. 11 Claims. (Cl. 83—56.)



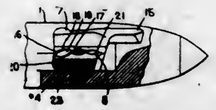
1. A separator comprising in combination, a casing, a cover therefor, a screen mounted in said casing, means to percussively vibrate said screen including a member projecting down through said cover toward said screen, means automatically to lift said member from said screen on opening of said cover, and a socket on said screen receiving said member and having a lateral opening allowing side movement of said member as it is lifted.

1,350,627. ROTARY DRY-DISTILLING APPARATUS. FLOYD G. TEN BROECK, Brooklyn, N. Y., and MILTON T. WESTON, Keansburg, N. J., assignors to West Virginia Pulp & Paper Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1918. Serial No. 248,619. 19 Claims. (Cl. 203—6.)



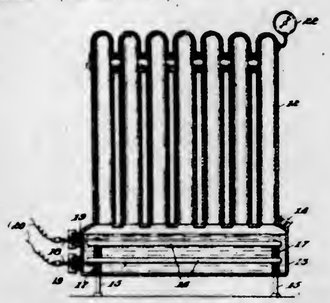
2. In a rotary dry distilling apparatus, a retort shell, a feed head secured thereto, a feed member revolubly mounted in said feed head and formed with a vapor passage and a feed passage, a feed screw in said feed passage, a collar communicating with said feed passage, a feed hopper and a connected depending neck located within said collar, a feed gate in said collar adjacent said neck, a feed lever connected to said feed gate, a feed motor and driving connections therefor to operate said feed screw, a switch for said feed motor and a feed member connected to said feed lever to retard and stop the operation of said feed screw as said feed gate rises when less material is discharged from said hopper.

1,350,628. BRICKMAKING-MACHINE. FREMAN HENRY WALKER, Boswell, Okla. Filed Sept. 19, 1919. Serial No. 324,750. 5 Claims. (Cl. 25—48.)



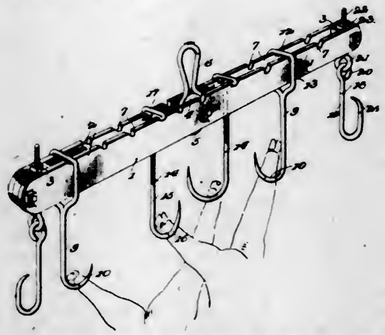
3. In a device of the class described, a hopper; a mold chute coöperating with the hopper; a follower mounted to reciprocate in the chute; a rotary feeder having an arm and including a part operating in the hopper; a bell crank pivoted to the follower and including a lateral arm and a second arm; a yieldable element having a fixed length, one end of said element being anchored, and the other end thereof being connected to the lateral arm of the bell crank thereby to swing the second arm of the bell crank into the path of the arm of the feeder when the follower is retracted, whereby the arm of the feeder will advance the follower; and means operated by the arm for retracting the follower.

1,350,629. HOG-WATERER. MARGARET V. WIDHELM, Fremont, Nebr. Filed Jan. 19, 1920. Serial No. 352,249. 3 Claims. (Cl. 119—73.)



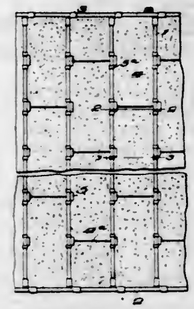
1. A stock-watering apparatus comprising a tank, a housing disposed at one side of the tank and provided with an opening in its front wall, a shelf in the housing below said opening, a drinking pan removably supported on said shelf and in communication with the tank, and a guard extending across the pan below the upper edges of the walls of the same and provided with an opening.

1,350,630. TENSION DEVICE FOR SHUTTLES. ARNOLD WILD, Danielson, Conn., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 21, 1920. Serial No. 360,524. 9 Claims. (Cl. 139—46.)



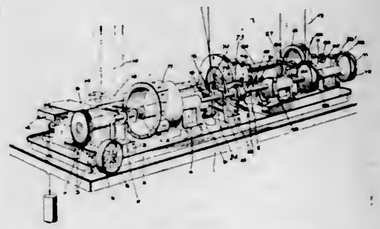
9. A tension device for loom shuttles comprising a flat tapered bar twisted to form helical ribs and having means for anchoring the same at the larger end in the shuttle to position said bar axially of the thread passage leading to the the shuttle eye.

1,350,631. ELECTRIC HEATER. CHARLES A. XARDELL, Utica, N. Y. Filed Jan. 8, 1920. Serial No. 350,066. 4 Claims. (Cl. 219—40.)



1. An electric heater comprising a radiator having a longitudinally extending liquid-tight receptacle at its base and with which receptacle the chambers of the radiator sections communicate, longitudinally extending electrodes or heating members, arranged one above the other, in said receptacle and insulated from each other, and electric communication between which members may be established by liquid in said receptacle, and insulated electric connections from outside of the heater to said members; whereby, when the electric current is turnnd on the heating operation will proceed until the liquid in said receptacle is caused, by evaporation, to fall below the level of the upper electrode or heating member, when the circuit will be broken, but will be resumed when the liquid is caused, by condensation, to rise to said upper electrode or heating member and thus close the circuit.

1,350,632. GAMBREL. HERMEN E. ALBRECHT, What Cheer, Iowa. Filed July 2, 1919. Serial No. 308,067. 6 Claims. (Cl. 17—30.)

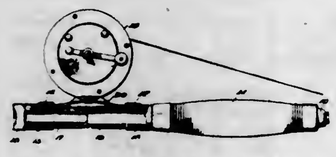


1. A gambrel comprising a bar, an anchored hook at each end of said bar, and hooks having eyes adjustable along the said bar and said end hooks forming a stop means for the eyes whereby the association between the adjustable hooks and the bar is permanently maintained.

1,350,633. WALL CONSTRUCTION. ROBERT I. ALLSWORTH, New York, N. Y. Filed Apr. 9, 1920. Serial No. 372,536½. 8 Claims. (Cl. 72—46.)

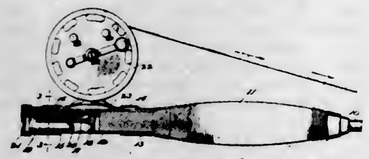
6. A wall or partition structure comprising a series of spaced vertical channel irons; plaster boards between said irons, one edge of each board being disposed within the channel of one adjoining iron, and the opposite edge of said board carrying a clip adapted to abut the smooth face of the succeeding iron and engage the flanges thereof.

1,350,634. SWAGING-MACHINE. ARTHUR A. ARNOLD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 2, 1918. Serial No. 210,032. 24 Claims. (Cl. 78—22.)



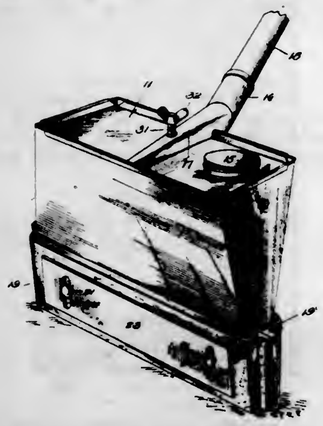
1. A swaging machine including a rotating head, means for feeding a piece of stock into the head, a plurality of of dies carried by the head, means for successively bringing the dies into operative engagement with the stock, and a cutter for severing the piece of stock which has been operated upon from the main stock.

1,350,635. REEL-SEAT. WILBUR L. BEATY, South Butte, Mont. Filed Apr. 16, 1919. Serial No. 290,623. 9 Claims. (Cl. 43—22.)



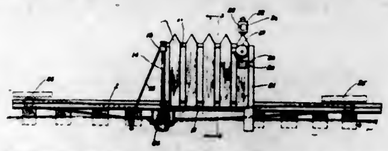
1. A reel seat including a core provided with a removable section, means securing said section in place, a nut carried by the section, a staple bearing over the nut and connecting the nut with the section, reel engaging means fixed with respect to the core, a cap slidably fitting over the core and adapted to coact with said means for connecting a reel with the core, and an adjusting screw freely received through the cap and threaded through said nut for advancing the cap.

1,350,636. REEL-SEAT FOR FISHING-RODS. WILBUR L. BEATY, South Butte, Mont. Filed Nov. 26, 1919. Serial No. 340,785. 2 Claims. (Cl. 43—22.)



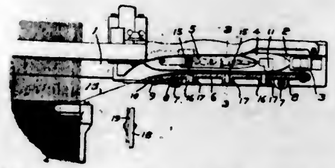
1. A reel seat including a barrel, fixed reel engaging means thereon, a sleeve slidable upon the barrel to coact with said means for connecting a reel with the barrel, the barrel having its wall internally threaded, and a follower threaded to engage the threads of the barrel and adjustable to coact with said sleeve for advancing the sleeve.

1,350,637. REEL-SEAT FOR FISHING-RODS. WILBUR L. BEATY, South Butte, Mont. Filed Nov. 26, 1919. Serial No. 340,786. 8 Claims. (Cl. 43—22.)



1. A reel seat including a barrel, reel base engaging means carried thereby, a reel base engaging sleeve slidable upon the barrel, a follower received within the barrel and adapted to coact with the sleeve, means mounted within the barrel to coact with the follower whereby the follower may be adjusted for advancing the sleeve, and an elongated handle carried by the follower and adapted to be grasped for manipulating a rod connected to the seat.

1,350,638. FLOOR-OILER. PRESTON BELVIN, Richmond, Va. Filed Sept. 5, 1919. Serial No. 321,824. 6 Claims. (Cl. 15—51.)

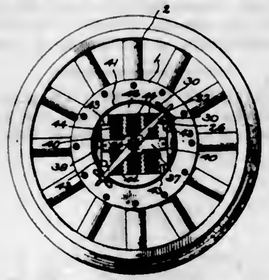


1. A device of the character described including a reservoir, a rubbing shoe associated therewith and having a lineal floor engaging edge, adjustable reinforcing elements on each side thereof movable along the rubbing shoe away from the edge thereof, a distributer in communication with the reservoir, and means for controlling the flow from the distributer.

1,350,639. RAILROAD-GATE. JOHN BEREZNAY, Throop, Pa. Filed Jan. 30, 1920. Serial No. 355,234. 1 Claim. (Cl. 246—313.)

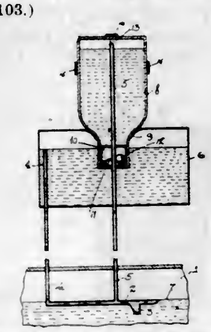
In a device of the character described, a swingable gate, an upright shaft on which said gate is mounted, a bevel gear on said shaft, a horizontal shaft, a bevel gear on said horizontal shaft meshing with the bevel gear on said upright shaft, a sprocket wheel on said horizontal shaft, a pinion in spaced relation to said horizontal shaft, a second horizontal shaft carrying said pinion, a second sprocket wheel on said pinion shaft, a chain operatively connecting said sprocket wheels, a rack carried by a train for engaging said pinion to automatically operate said gate, an electric bell on said gate, a lamp, having a warning light showing when said gate is closed, carried by said gate, a stationary gate post against which said gate closes, and current carrying wires carried by said gate post for ringing said bell when said gate is closed.

1,350,640. FILLING-REPLENISHING LOOM. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 15, 1919. Serial No. 330,742. 7 Claims. (Cl. 139—85.)



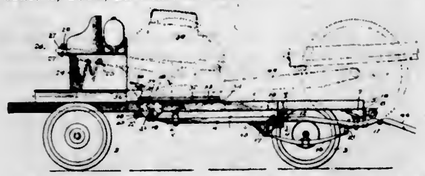
1. In a filling replenishing loom, the combination of the lay and shuttle-box, a shuttle having a side delivery eye and a groove extending from said delivery eye longitudinally along the exterior side wall of the shuttle, and a series of tufts secured to the side of the shuttle-box at intervals and in position to enter the longitudinal groove in the shuttle when the latter is boxed acting to hold the filling thread in the groove, and means for adjustably securing the series of tufts in position.

1,350,641. DETACHABLE HANDLE. FREDERICK E. CARLSON, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 20, 1917. Serial No. 192,400. 4 Claims. (Cl. 294—33.)



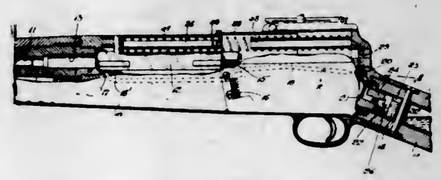
1. A detachable handle comprising a pair of spaced engaging members of inverted U-shape whose planes are normally angularly disposed with reference to one another, said members being movable toward and away from one another to permit of the handle being applied to a container, and spring means tending to move said members to normal position.

1,350,642. SHOCK-ABSORBING WHEEL. ANDREW L. CARROLL, St. Louis, Mo., assignor of one-half to Gregg McKenzie, St. Louis, Mo. Filed July 7, 1919. Serial No. 308,936. 4 Claims. (Cl. 180—71.)



2. The combination of a stationary rest, an inner hub member disposed concentrically around said rest, shock-absorbing devices between the rest and the said hub member, an outer hub member rotatably fitted about the inner hub member, a guide on the outer face of the outer hub member, and a driving arm secured to the axle and engaging in said guide and playing through the same as the hub members move vertically relative to the axle.

1,350,643. OILING SYSTEM. ANTHONY COSTA, East Cleveland, Ohio, assignor to The Gravity Carburetor Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 25, 1917. Serial No. 170,867. 3 Claims. (Cl. 184—103.)

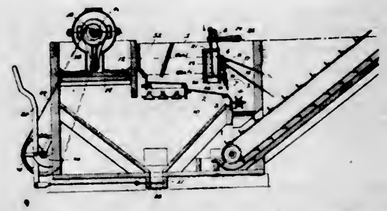


1. The combination with an oil reservoir, of a conduit leading thereto at the level to be maintained therein, a holder mounted adjacent to the upper open end of said conduit, and a normally sealed container adapted, when set in said holder and positioned over the open end of said conduit, to automatically be placed in connection therewith, said container being provided with means adapted to seal the same upon normal removal from said conduit.

1,350,644. ARTILLERY TRUCK. WALTER T. DOVE, U. S. Army. Filed June 10, 1919. Serial No. 303,221. 11 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

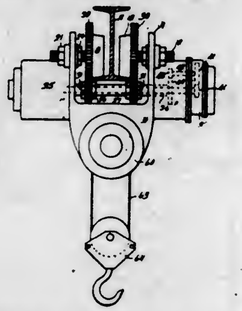
1. A truck having a frame, wheel members parallel with the frame, said frame being supported at its forward end independently of the wheel members and at its rear end by said wheel members.

1,350,645. APPARATUS FOR LUBRICATING AMMUNITION. THEODORE H. EICKHOFF, Cleveland, Ohio, assignor, by mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1917. Serial No. 204,269. 27 Claims. (Cl. 42—1.)



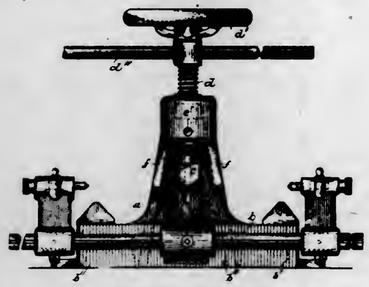
26. A gun comprising a fluid duct, means for producing a flow of fluid through said duct, a lubricant chamber, and a lubricant duct having a nozzle projecting into said fluid duct so that said flow of fluid will aspirate lubricant from said lubricant duct, said fluid duct being directed to a part of the gun thereby to lubricate the part.

1,350,646. MAGAZINE. THEODORE H. EICKHOFF, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 4, 1920. Serial No. 378,798. 17 Claims. (Cl. 42—50.)



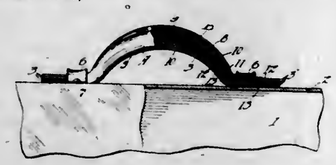
1. A magazine for cartridges comprising lips adapted to gradually release a cartridge, the lips extending laterally beside the cartridge beyond the point of release and adapted to contact therewith to prevent lateral deviation.

1,350,647. DISCHARGE CONTROL FOR JIGS AND LIKE MACHINES. GUY H. ELMORE, Swarthmore, and HARRY L. MCLEAN, Scranton, Pa. Filed July 22, 1918, Serial No. 246,192. Renewed Jan. 23, 1920. Serial No. 353,588. 5 Claims. (Cl. 83—58.)



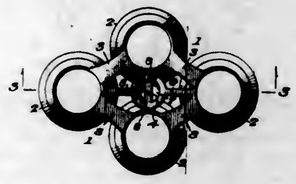
1. In combination with a machine for separating bodies of differing specific gravity, a perforate bed or screen to support the materials to be treated; an outlet at the discharge end of said bed or screen for the escape of the heavier materials; an overflow for the lighter material; a discharge valve controlling the escape of the heavier material; a stationary imperforate casing above the bed or screen; a float wholly within said casing; a rockshaft provided with a radial arm from which said float is suspended; and connections between the rockshaft and the discharge valve, whereby said valve is caused to discharge the heavier materials when the float is elevated to a predetermined level by the building up of the heavier material beneath it.

1,350,648. TROLLEY. BENJAMIN F. FITCH, Evanston, Ill., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,460. 4 Claims. (Cl. 105—113.)



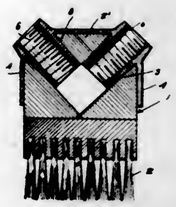
2. The combination of a trolley frame having upwardly extending portions with openings through them, studs occupying said openings and extending on each side thereof, said studs having intermediate bearing portions in the openings and being threaded on each side of the openings, nuts screwing on the studs and jamming against the opposite sides of the frame portion, and wheels journaled on the inner ends of the studs.

1,350,649. PRESS-BODY. PHILIP A. GEIER, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1917. Serial No. 148,423. 6 Claims. (Cl. 153—53.)



1. A press body integrally formed of a casting hollow in its upright portion and interiorly reinforced transversely approximately in the zones of the upper and lower angles of the press jaw, and exteriorly reinforced integrally at the sides only of the upper angle thereof, whereby adequate working space is afforded therebetween, substantially as set forth.

1,350,650. HANDLE. WILLIAM HANDLER, Newark, N. J. Filed Mar. 15, 1917. Serial No. 154,921. 4 Claims. (Cl. 190—57.)

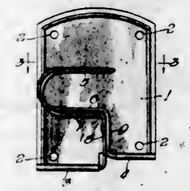


1. A handle comprising a bottom member and a filler member applied to the bottom member intermediate the ends thereof, said filler member having a stiff reinforcing member extending longitudinally thereof and inclosed therewithin, said handle having reduced portions adjacent its ends whereby it is adapted for connection with a bag or the like by keepers applied to such bag and taking loosely over such reduced portions, and reinforcing means anchored only and directly to said bottom member and extending longitudinally of the handle at said portions.

1,350,651. CULINARY UTENSIL. CHARLES S. HIRST, Philadelphia, Pa.; Charles I. Cronin and Logan Trust Company executors of said Charles S. Hirst, deceased. Filed Mar. 6, 1919. Serial No. 281,047. 3 Claims. (Cl. 53—7.)

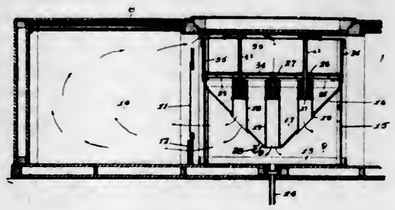
1. In a culinary utensil of the character stated, a series of connected inverted conical cups which are open throughout and interiorly of conical form, and a member centrally joining the upper portions of said cups, said member having therein a depression, and a handle joined to the wall of said member above said depression.

1,350,652. BRUSH. WILLIAM E. HUGHES, Greenville, S. C., assignor to Robert O. Brooks, Atlanta, Ga. Filed Sept. 12, 1919. Serial No. 323,287. 1 Claim. (Cl. 287—11.)



In combination, a brush head having an enlargement formed intermediate its ends and inwardly directed converging openings formed therein and in communication with each other, transversely curved plates secured to the enlargement and having their opposing ends in abutting engagement and their other ends terminating on the front and rear walls of the head, and tubular internally screw threaded members formed integrally with the plates and projecting slightly beyond the outer faces of said plates to receive a handle, said members being disposed on converging planes and projecting beyond the inner faces of said plates and extending into and terminating adjacent the inner ends of the openings to prevent wear on the openings by the handle.

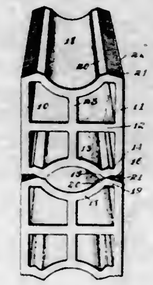
1,350,653. SHEARS. DOLPH JOHNSON, Burke, Idaho, assignor of one-half to John Carlson, Mullan, Idaho. Filed May 6, 1919. Serial No. 295,104. 1 Claim. (Cl. 30—13.)



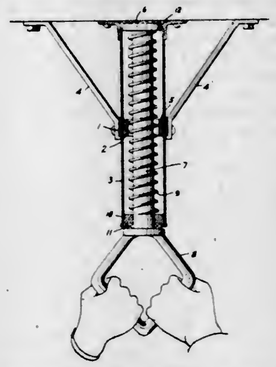
The combination with the handle having a bifurcated end formed with an externally beveled cutting edge and a spaced guard of equal length, of a crossed handle with a cutting jaw pivoted in the bifurcated end, a pivot bolt passed through the two cutting members, an enlarged bearing boss on the bolt loose in the guard and having a flat bearing face for said cutting jaw, a head on the bolt outside the guard and a nut on the opposite end of the bolt to tighten the cutting members against said boss.

1,350,654. BROOM-HANGER. GEORGE B. KEPLINGER, Chicago, Ill. Filed Oct. 13, 1919. Serial No. 330,435. 3 Claims. (Cl. 24—257.)

1. A broom hanger comprising a supporting member adapted to be mounted on a wall, and an object engaging element comprising two arms engaged with said supporting element at separated points to swing on parallel axes, both said arms terminating in a single U-shaped object receiving formation integral with said arms and connecting therewith at the outer end of one of its arms, the latter consisting of two parts adapted to be sprung apart in the plane of said member as said object engaging element is pivotally moved whereby said object receiving formation is contracted during pivotal movement in one direction to engage an object received therein.



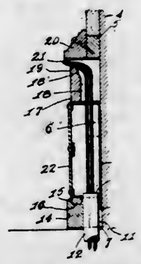
1,350,655. REFRIGERATOR. CHARLES A. KETTERER, East St. Louis, Ill. Filed July 11, 1918. Serial No. 244,395. 3 Claims. (Cl. 62—67.)



2. A refrigerator comprising a storage compartment a refrigerator receptacle located adjacent thereto, said receptacle having an ice compartment and a brine compartment, the compartments being separated from each other by a screen, air circulation tubes extending through the ice and brine compartments, slide valves for regulating the passage of air through the tubes, and means for removing the congealed moisture from the tubes and ice receptacle.

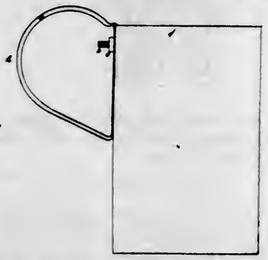
1,350,656. BUILDING-BLOCK. MATTHEW LEANDER KING, Des Moines, Iowa. Filed Jan. 13, 1919. Serial No. 270,847. 2 Claims. (Cl. 72—41.)

1. A hollow block having vertical side walls and having an upper wall with a concave central portion and with upwardly and outwardly inclined smooth surfaces at each side of said concave portion, said block having a lower wall with a concave central portion and with smooth surfaced portions extending upwardly and outwardly from said concave portion, the upper surface of the block being inclined downwardly and outwardly from the smooth portions thereof.



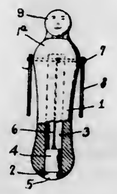
1,350,657. RIGID HAND-GRIP FOR CARS. MARY A. KIRSCHMANN, Philadelphia, Pa. Filed June 11, 1920. Serial No. 388,124. 2 Claims. (Cl. 105—354.)

1. An extensible rigid hand grip for cars comprising in combination opposed interconnected inner and outer rings, a tubular casing between the rings, stays applied to the outer ring for bracing both rings, and a spring retracted hand grip slidably arranged in the casing and provided with a head adapted to abut on the inner ring and be braced by said stays, substantially as described.



1,350,658. OPEN-SLOT CONDUIT. FRANKLIN P. LAWRENCE, University City, Mo. Filed Dec. 23, 1918. Serial No. 268,094. 4 Claims. (Cl. 247—1.)

3. A conduit for concealing telephone, telegraph and signal conductors comprising a panel, the upper edge of

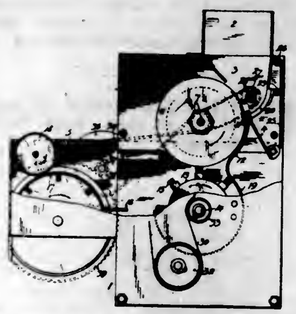


which being provided with a tapered channel or groove formed on its inside face, and a detachable molding spaced apart from the channel and parallel therewith, said molding being wider than the thickness of the panel and projecting beyond the front face of the panel so as to conceal the space between the upper edge of the panel and the molding, and an outlet box located in said panel and communicating with the tapered channel or groove.

1,350,659. HANDLE FOR METALLIC VESSELS. WILLIAM C. LEAVITT, Norway, Me. Filed Sept. 6, 1919. Serial No. 322,170. 1 Claim. (Cl. 16—10.)

A handle for metallic vessels made of a strip of metal having a small hole through each of its two ends and so bent that in its bended form the two ends pass or extend by each other and the two holes are thus brought in registry, and means of attaching same to vessel by the use of a small bolt and nut: the bolt passing through the holes in the two ends described and vessel with nut turned into place firmly attaching handle to vessel, all substantially as described.

1,350,660. TOY DOLL. WALTER LENCHARD, McKeesport, Pa. Filed Nov. 1, 1919. Serial No. 334,999. 5 Claims. (Cl. 46—40.)

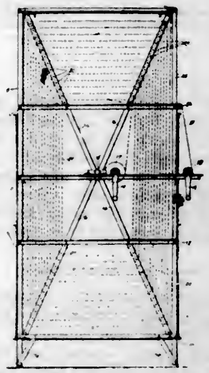


1. In a device of the character described, a body provided with a central vertical bore, a weight member slidable in said bore, and means for adjusting said weight member vertically for varying the position of the center of gravity of the device.

1,350,661. COTTON-GIN. SOLOMON K. LICHTENSTEIN, New York, N. Y. Filed Sept. 10, 1917. Serial No. 190,624. 5 Claims. (Cl. 13—9.)

1. In a cotton gin the combination of a ginning member of the cylinder type, a stationary opposing bar arranged near the periphery of the ginning cylinder and a plurality of laterally spaced ribs extending outwardly from the opposing bar and against which the cotton roll is adapted to press, the spaces between said ribs being adapted to permit the ginned cotton seeds to pass therethrough, said ribs having their top surfaces curved outwardly and upwardly from the opposing bar.

2. In a cotton gin the combination of a revoluble ginning member of the cylinder type, a stationary opposing bar arranged near the periphery of the ginning cylinder on the descending side thereof, and a plurality of spaced ribs extending outwardly from the opposing bar opposite the descending side of the cylinder and having curved top surfaces on which ribs the cotton roll is adapted to rest, the spaces between said ribs being adapted to permit the ginned cotton seeds to pass therethrough.

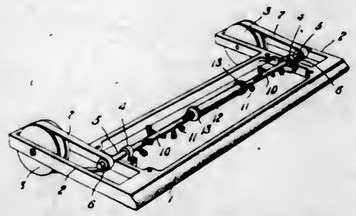


3. In a cotton gin the combination of a revoluble ginning member of the cylinder type, a stationary opposing bar arranged near the periphery of the cylinder on the descending side thereof and substantially in the plane of the axis of the cylinder, and a plurality of spaced ribs extending outwardly from the opposing bar, said ribs having concave top surfaces on which the cotton roll is adapted to rest, the spaces between said ribs being adapted to permit the ginned cotton seeds to pass therethrough.

4. In a cotton gin the combination of a revoluble ginning member of the cylinder type, a stationary opposing bar arranged near the periphery of the cylinder, a plurality of spaced ribs extending outwardly from the opposing bar, and having curved top surfaces on which the cotton roll is adapted to rest, the spaces between said ribs being adapted to permit the ginned cotton seeds to pass therethrough, a revoluble member arranged over the said ribs to cooperate with the cylinder to revolve the cotton roll and means for revolving said latter member and said cylinder in the same direction.

5. In a cotton gin the combination of a revoluble ginning cylinder, a roll box, a revoluble member in the roll box coöperating with the cylinder to form and revolve a cotton roll, and a plurality of stationary ribs having curved top surfaces forming the bottom of the roll box and spaced apart laterally to provide spaces through which the ginned cotton seeds may pass, said ribs being arranged to support the cotton roll formed in said roll box.

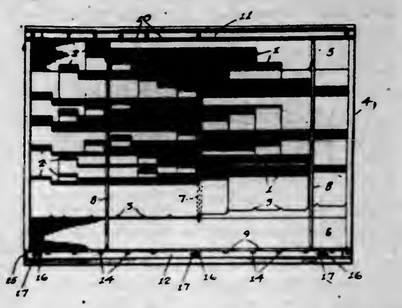
1,350,662. RACK. FRANK J. MACDONALD, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 29, 1918. Serial No. 237,214. 8 Claims. (Cl. 34—26.)



7. A rack for storing and handling thin flexible material, comprising a framework, a plurality of rollers in said framework, a flexible supporting sheet passed over said rollers in a circuitous path, a winding roller located at one end of the path and a second winding roller located at the other end of the path, and means for rotating the winding rollers to pass the sheet through said path in either direction.

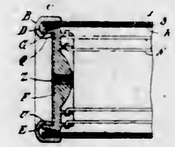
1,350,663. QUICK-ACTION JACK. ALEXANDER W. MARR, Canton, Ohio. Filed Aug. 19, 1919. Serial No. 318,541. 17 Claims. (Cl. 254—103.)

1. In a device of the type described, the combination with a tubular standard, of a screw vertically movable therein, threaded means movable into and out of engagement with said screw for the purpose specified, and resilient means within the standard swiftly to elevate said screw when the threaded means are out of engagement therewith.



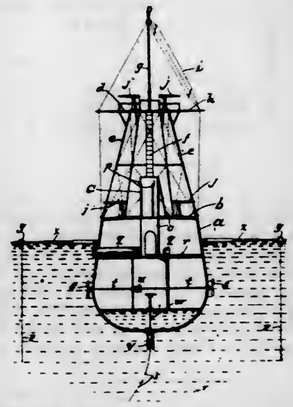
1,350,664. BRUSH FOR CARPET-SWEEPERS. GROVE R. MERRIMAN, Akron, Ohio, assignor to John R. Vander Putten, Akron, Ohio. Filed Oct. 27, 1919. Serial No. 333,530. 7 Claims. (Cl. 15—60.)

1. In a carpet sweeper, a pair of axially alined independently rotatable brushes and a coupling member connecting the inner extremities of said brushes, said brushes arranged for axial movement with relation to each other.



1,350,665. CARD-INDEX. HENRY MULLER, East Orange, N. J. Filed Aug. 8, 1918. Serial No. 248,982. 12 Claims. (Cl. 129—16.)

2. In a device of the class described, the combination of cards having series of notches in their lower edges, a box in which said cards may be shifted laterally, a fore and aft positioning member with which said notches may be selectively engaged, and laterally movable means extending lengthwise to the holder and arranged at the top

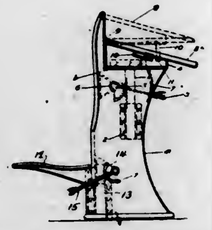


of the box and above the tops of the cards for guiding the cards into engagement with the positioning member.

1,350,666. STORAGE CYLINDER OR VESSEL FOR COMPRESSED AIR OR GAS. STEPHEN JAMES MURPHY, Drogheda, Ireland. Filed Dec. 6, 1917. Serial No. 205,770. 7 Claims. (Cl. 220—3.)

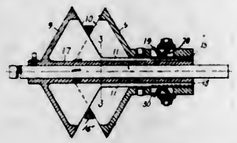
1. A storage cylinder or vessel for compressed air or gas, comprising a gas-tight cylinder or tube, end pieces for such cylinder or tube, each end piece being composed of two circular members adapted to engage with one another, a packing ring between the inner of said two members and the inner wall of the cylinder or tube, and means for connecting the inner member of one end piece firmly with the inner member of the opposite end piece, so that the longitudinal stress of the internal pressure may be borne by said connecting means rather than by the cylinder or tube.

1,350,667. FLOATING FORTRESS. JULIEN ORTIZ, Greenville, Del. Filed Apr. 7, 1917. Serial No. 160,345. 2 Claims. (Cl. 114—240.)



1. A floating fortress comprising a hull, struts having telescopic connections, floats carried by the struts, and nets depending from the floats, the struts being hinged to the hull to swing in a vertical plane.

1,350,668. MOTOR-VEHICLE. ELMER H. OVERSMITH, Buffalo, N. Y., assignor to The Buffalo Truck and Tractor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 21, 1918. Serial No. 258,952. 4 Claims. (Cl. 180—53.)



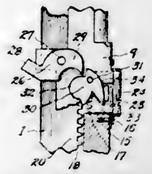
1. In a motor vehicle, the combination with the engine and the transmission gearing connected thereto, of a drive wheel, an auxiliary transmission gearing between said drive wheel and first-mentioned transmission gearing, and a second shaft adapted to be driven from said first-mentioned transmission gearing independent of said auxiliary transmission gearing.

1,350,669. ADJUSTABLE SCHOOL-DESK. DONHAM OWEN, Berkeley, Calif. Filed Jan. 15, 1917. Serial No. 142,362. 1 Claim. (Cl. 155—82.)

A desk of the character described comprising standards, carriers guided thereby and provided with rack teeth, an adjustable desk section attached to said carriers, a rock shaft mounted in said standards, quadrants carried by said rock shaft and meshing with the teeth of said carriers, a lever for actuating said rock shaft, and means on said lever and on one of said standards for locking said lever against movement.

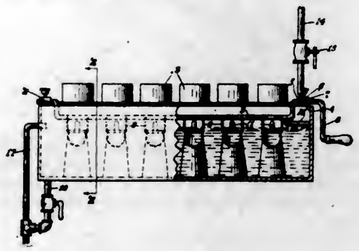
1,350,670. SPEED-CHANGING MECHANISM. MATHEW RITTER, Freehold, N. J. Filed July 30, 1919. Serial No. 314,348. 2 Claims. (Cl. 64—8.)

1. In a device of the class described, a pulley comprising a plurality of intermeshing members adapted to be respectively positioned nearer or at a greater distance from each other, means to lock the members by the movement thereof, means for governing the said movement comprising a handle, and means comprising a manually actuated device located adjacent to said handle to release the said members from their adjusted position.



1,350,671. WRENCH. FRANK E. SAYRES, Thane, Alaska. Filed Dec. 17, 1919. Serial No. 345,537. 2 Claims. (Cl. 81—180.)

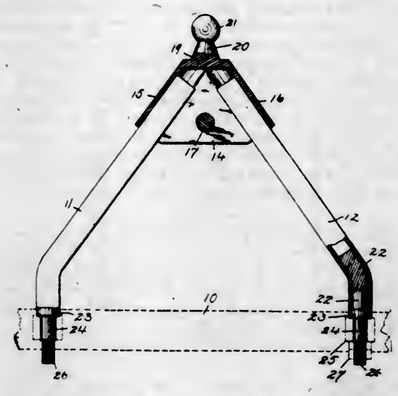
1. The combination with a wrench of the character described comprising a shank and relatively fixed and movable jaws mounted on said shank provided with apertures therethrough in the direction of the shank, of gripping plates mounted on the opposed faces of said jaws, posts



fixed to said plates and extending therefrom through said jaw apertures and having notches at their outer ends, and springs fixed to said jaws adapted to enter said notches to retain said plates in functional position in said jaws.

1,350,672. MONKEY-WRENCH. FRANK E. SAYRES, Thane, Alaska. Filed Dec. 17, 1919. Serial No. 345,538. 1 Claim. (Cl. 81—145.)

A wrench of the character described comprising, a shank bar having teeth along one edge thereof, a jaw fixed at the end of said shank, a jaw slidable along said shank having a recess therein provided with a lateral opening, a locking block slidable within said recess toward and from the shank and having teeth thereon adapted to interlock with the shank teeth, a cover for said recess, a spring located within said cover bearing against said block to urge the latter inwardly, a lug on the block extending through said lateral opening, a lever pivotally mounted on the slidable jaw having a rounded end engageable with said lug and having a head at its opposite end, a second lever pivotally mounted on the slidable jaw having an end engageable with said head and having a thumb shank at its opposite end whereby said levers may be actuated to move said block to release the movable jaw from the shank.



1,350,673. FILLING DEVICE. FRANK A. SEBRING and FRANK STROBL, Sebring, Ohio. Filed Nov. 5, 1917. Serial No. 200,283. 1 Claim. (Cl. 221—97.)

In a filling device of the character described, the combination of a trough adapted to hold a quantity of liquid, a crank shaft removably journaled upon said trough and arranged to normally extend within the trough, a plurality of U-shaped brackets carried by the crank shaft, a filling receptacle pivotally mounted upon each of said brackets and provided with forwardly disposed spouts at

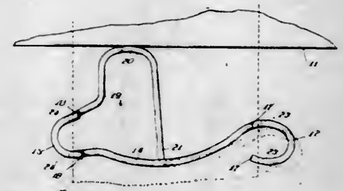
their upper ends, the rear portion of each receptacle being cut away at its upper end to permit their being filled with the liquid in the tank while submerged therein, the crank shaft adapted to be rotated to lift the receptacles filled with liquid from the trough and to carry them to a point above the trough and tilt them into position to empty the liquid therefrom through said spouts, the forward faces of said receptacles resting upon the crank shaft when in the emptying position.

1,350,674. BRACING-FIXTURE. PETER H. SEERY, Newark, N. J. Filed Mar. 13, 1919. Serial No. 282,363. 4 Claims. (Cl. 267—66.)

1. A bracing fixture comprising a pair of divergent rods, a bracket adapted to grasp the ends of the rods where they converge, and a bolt fitting in the end of each rod opposite to its converging end, said bolt and rod being bent and adapted to form means for attaching the fixture to a support.

1,350,675. LIFTING-TONGS. JAMES H. SMITH, Salisbury Mills, N. Y. Filed Nov. 28, 1919. Serial No. 341,060. 5 Claims. (Cl. 294—115.)

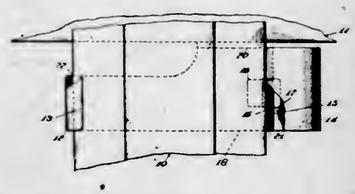
1. In a grasping device, a rod, a cross head slidable on the rod, a pair of coacting gripping jaws connected with the cross head substantially U-shaped yokes longitudinally adjustable on the rod and provided with guide openings, and an operating rod slidble through the guide openings and connected with the cross head.



2. In a grasping device, a rod, a cross head slidable on the rod, a pair of coacting gripping jaws operatively connected with the cross head, U-shaped yokes adjustable longitudinally of the rod and each having one leg formed with the guide opening, an operating rod slidable in the guide openings and connected with the cross head, and an expansible coil spring encircling the first named rod and bearing against one of the yokes and the cross head to normally urge the jaws into coacting gripping relation.

3. In a grasping device, a rod, a cross head slidable on the rod, the ends of the cross head being disposed in a plane at right angles to the intermediate part of the cross head, a pair of links having their inner ends pivotally connected to the forward end of the rod, a pair of jaws pivotally connected to the ends of the cross head and having pivotal connection with the links, the gripping jaws being shaped to conform to the shape of the object to be grasped, an expansible coil spring on the rod and urging the cross head toward the forward end of the rod.

4. In a grasping device, a rod, jaws pivotally connected to the rod, a spring mounted on the rod for normally holding the jaws in closed position, a stop adjustably mounted upon the rod and engaging the spring, and a pull rod slidably carried by the stop and having connection with the jaws.

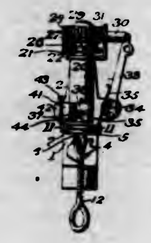


5. Lifting tongs comprising a rod, a short sleeve slidably mounted upon the rod, a cross head carried by the sleeve and extending beyond opposite sides of the rod, gripping elements embodying shanks pivoted to the ends of the cross head and jaws arranged at an angle to the plane of the shanks, links pivoted to said rod and shanks, a spring urging the sleeve forwardly on the rod, and a pull rod connected to the sleeve.

1,350,676. RAIL-ANCHOR. HIRAM H. SPONENBURG, Gurnee, Ill., assignor, by mesne assignments, to Otto R. Barnett, Chicago, Ill. Filed Oct. 3, 1919. Serial No. 328,252. 15 Claims. (Cl. 238—330.)

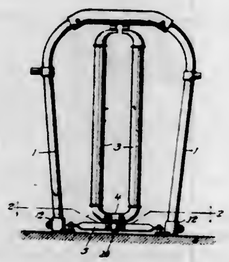
1. A rail anchor having jaws adapted to engage opposite edges of a rail base at a plurality of points; the distance between the jaws being normally less than the width of the rail base, and the device being adapted to be flexed to permit its application to the rail.

1,350,677. RAIL-ANCHOR. HIRAM H. SPONENBURG, Gurnee, Ill., assignor, by mesne assignments, to Otto R. Barnett, Chicago, Ill. Filed Oct. 3, 1919. Serial No. 328,254. 9 Claims. (Cl. 238—330.)



1. A rail anchor comprising a rail base embracing member formed at one end with a jaw for engaging one edge of the rail base and at the other end with an upwardly extending loop providing a jaw for engaging the opposite edge of the rail base; said loop being adapted to yield to permit the application of the device to the rail and exerts a spring pressure against the vertical edge of the rail when the device is applied to its operative position.

1,350,678. GAS-BURNER. GEORGE H. STEVENS, Woodbury Heights, N. J. Filed Oct. 29, 1919. Serial No. 334,120. 5 Claims. (Cl. 67—20.1.)



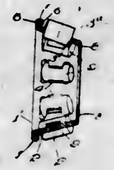
1. In a gas burner, the combination with the burner proper having a valve controlled inlet, of an abrading wheel, pyrophorous metal in contact with said wheel, a

spring actuated device to revolve said wheel, and shock absorbing means for said device to retain it in position to

be released and to absorb the shock resulting from its being released.

1,350,679. STANCHION-FASTENER AND SHOCK-ABSORBER. CHARLES M. STEVENSON, Rockford, Ill. Filed May 28, 1917. Serial No. 171,460. 6 Claims. (Cl. 119—147.)

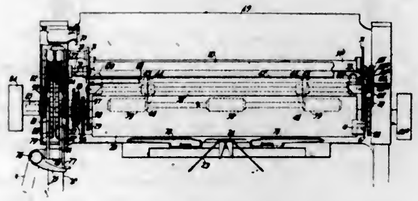
1. The combination of a pair of spaced supports, and a stanchion, of attaching means including a resilient bar having its end portions connected with said supports, and means for connecting the stanchion to the said resilient bar intermediate the ends thereof.



2. The combination of a pair of spaced supports, and a stanchion, of attaching means including a resilient bar, pivotal sliding connections between the end portions of said bar and said supports, and means for connecting the stanchion to the resilient bar intermediate the ends thereof.

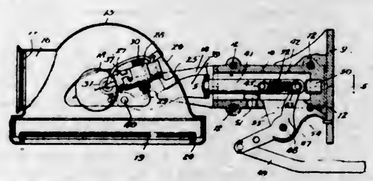
3. The combination with a stall frame, and a stanchion having its upper end operatively connected with the frame, of attaching means including a bar extending horizontally across the lower end of the stall frame and having its end portions connected with opposite side bars of the frame, said bar having a resilient portion intermediate its ends, and means connecting the lower end of the stanchion with said bar intermediate the ends thereof.

4. The combination of a pair of spaced supports, and a stanchion provided with a projecting stud at one end, of attaching means including a bar having its end portions connected with said supports, said bar having a resilient portion intermediate its ends adapted to yield laterally, a plate secured to the bar intermediate the ends thereof, said plate having an opening extending therethrough, the stud on the stanchion fitting into the said opening.



5. The combination of a pair of spaced supports, and a stanchion, of an attaching means including a resilient horizontally extending bar of general oblong shape in cross section, the bar being disposed with its broad side extending in a vertical plane and having end portions twisted a quarter of a turn, said end portions being connected with said supports, and means for connecting the stanchion to the resilient bar intermediate the ends thereof.

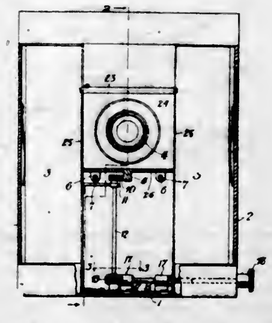
1,350,680. ROLLER-BEARING. FRANKLIN W. STEWART, Chicago, Ill. Filed Nov. 8, 1918. Serial No. 261,616. 3 Claims. (Cl. 64—38.)



1. A roller bearing comprising two separate conical shaped roller retaining sections one within the other, the two sections adapted to be slid one within the other until the opposed parts thereof are brought into contact, the two sections fitting closely together, each section being provided with a plurality of openings for the rollers, said openings registering when the sections are in position, roller retaining projections at two opposed edges of the said openings of each section projecting along the faces of the rollers so as to prevent them from coming out of said openings, and means for holding said sections against relative longitudinal movement.

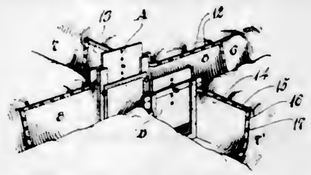
1,350,681. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., and ARTHUR A. JOHNSON, New York, N. Y., assignors to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1917. Serial No. 199,757. 98 Claims. (Cl. 197—127.)

1. The combination with a frame, of a platen revoluble for line-spacing and movable relatively to said frame to and away from printing position, a second platen connected to the first, so that either platen moves to printing position as the other moves away therefrom, the second platen mounted below the first, means for guiding and feeding work-sheets around the first platen, and means for guiding work-sheets to coöperate with either of said platens, the last-mentioned means including an introductory guide fixed upon said frame and extending from the rear downwardly and forwardly and under the second platen and up forwardly thereof, and also comprising a feeding couple upon said frame at the delivery side of the machine.



1,350,682. SIGNALING-LAMP FOR MOTOR-VEHICLES. THOMAS STOBS and WILLIAM LIGHTELL, Maywood, Ill. Filed Mar. 30, 1917. Serial No. 158,501. 4 Claims. (Cl. 116—43.)

1. In a signaling device for automobiles, the combination of a horizontally extending support, comprising a



hollow stem having its front end adapted to be secured to an automobile and a rearwardly extending fork, a lamp casing pivotally held in said fork provided with means whereby different indications will be made by rotation of the casing, a lighting unit in the casing and means for vertically tilting the entire casing, comprising a rod longitudinally movable in said hollow stem and having its rear end connected to said lamp casing eccentrically of its pivot and a rocker arm for shifting the rod.

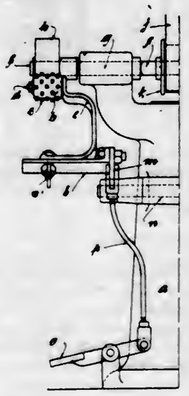
1,350,683. MOTION-PICTURE CAMERA. GEORGE R. STRINGHAM, New York, N. Y., assignor, by mesne assignments, to Martin V. Kelley, trustee, New York, N. Y. Filed Dec. 12, 1917. Serial No. 206,764. 8 Claims. (Cl. 88—17.)

1. In a motion picture camera, the combination with a camera casing and two film boxes mounted therein side by side with a central space between them, of a lens tube mounted between said film boxes entirely within the camera casing, substantially as set forth.

1,350,684. PORTABLE IRRIGATING DEVICE. FRANK SULLIVAN, Cusick, Wash. Filed Oct. 9, 1919. Serial No. 329,564. 2 Claims. (Cl. 61—29.)

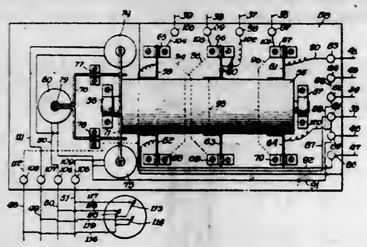
1. The combination with a flexible apron adapted to form a protecting trough, of a pair of gate frames secured to and bracing said trough, gates in the frames, and outlet troughs from said gates.

1,350,685. METHOD OF PARCHMENTIZING FABRIC. JOHN M. TAYLOR, Radnor, Pa., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Pennsylvania. Filed July 24, 1917. Serial No. 182,452. 4 Claims. (Cl. 8—20.)



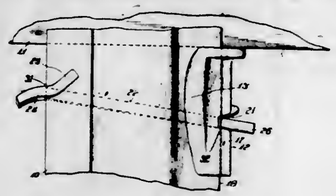
4. The method which consists in passing a web through a parchmentizing liquid; forming a roll of the parchmentized web; drawing said web from said roll through a body of washing liquid; forming it into a second roll while maintaining it at a constant tension; and thereafter repeatedly passing the web through the body of washing liquid also while it is maintained under constant tension until the strength of the liquid within the web is substantially the same as that of the washing liquid.

1,350,686. COLUMN CONSTRUCTION. JOHN R. TRUDELLE, Chippewa Falls, Wis. Filed June 27, 1919. Serial No. 307,142. 1 Claim. (Cl. 20—97.)



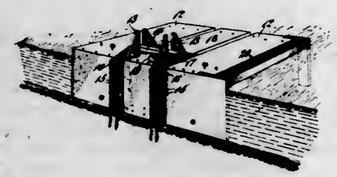
A column construction including a shell, bases associated with the ends of the shell, heads engaging the inner faces of the shell and secured thereto and to the bases, and having openings therein, a post having its end secured within the openings of the heads, spacing blocks carried by said post and engaging the inner face of the shell.

1,350,687. MACHINE FOR ORNAMENTING AND FINISHING THE SURFACES OF FELT HATS. WILLIAM ERNEST TURNER, Denton, near Manchester, England. Filed July 19, 1916. Serial No. 110,115. 2 Claims. (Cl. 223—30.)



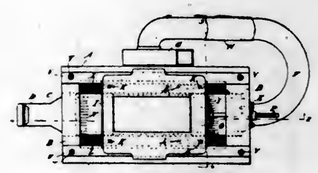
1. A machine for ornamenting felt materials, comprising in combination a frame work, an abrading or polishing roller, means to rotate said roller, a lever arm pivotally connected to the framework, an overhung pattern roller loosely mounted at the free end of said lever arm the peripheral surface of said pattern roller being provided with perpendicular stud like projections spaced apart at a distance which allows the felt material to sink around each projection when the latter is opposite the treating roller, together with foot operated means to bring and retain the pattern roller in engagement with the rotary treating roller, substantially as described.

1,350,688. DOOR-OPERATING MECHANISM. BURT M. WARNER, Chicago, Ill. Filed Jan. 14, 1918. Serial No. 211,736. 4 Claims. (Cl. 200—15.)



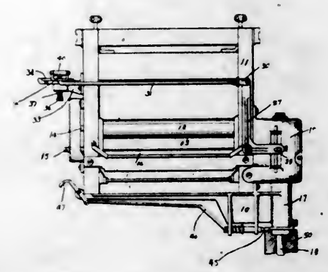
1. In a switching mechanism for a door operating system, the combination of a plurality of switch blades having alternate active positions, a plurality of switch contacts, first and second electromagnetic devices for moving said switch blades to said active positions as desired, circuit closers for controlling the operation of said electro-magnetic devices from a distance, mechanism for moving all of said switch blades to an inactive position, a third electromagnetic device for operating said mechanism, and a circuit closer for controlling the operation of said third electromagnetic device from a distance.

1,350,689. RAIL-ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1919. Serial No. 326,854. 18 Claims. (Cl. 238—329.)



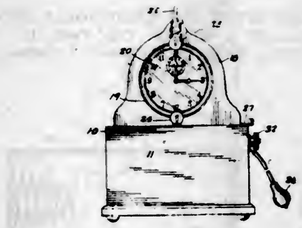
1. A rail anchor comprising a tie abutting member and a spring member adapted to engage opposite edges of the rail base and have an interlocking engagement with said tie abutting member.

1,350,690. WATERWAY REINFORCED CONCRETE CONSTRUCTION AND METHOD OF CONSTRUCTING THE SAME. JOSEPH STOKES WILLIAMS, Riverton, N. J. Original application filed Mar. 3, 1909. Serial No. 481,070. Divided and this application filed Jan. 21, 1913. Serial No. 743,238. 2 Claims. (Cl. 61—46.)



1. The method of forming a concrete construction within and upon a subaqueous bed, which consists in supporting upon a float an excavator and concrete filling mechanism, advancing the float to progressively form an excavation in the earth bed and to lay the concrete in the excavated space, floating a mold above a reinforced earth bed, sinking it into working contact therewith, placing concrete upon the reinforced earth bed, and molding the concrete by the contour of the mold.

1,350,691. SLIDING BASE FOR GRINDERS. MILTON F. WILLIAMS, St. Louis, Mo., assignor to Williams Patent Crusher & Pulverizer Co., St. Louis, Mo., a Corporation of Missouri. Filed May 12, 1919. Serial No. 296,584. 3 Claims. (Cl. 83—11.)

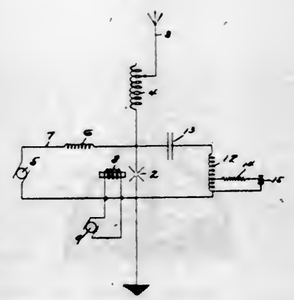


1. A device of the character described, comprising parallel stationary side sills separated to afford a space between them and securely anchored, a stationary pan open at the top and located in said space and having inlet and outlet connections, a slidable frame to support a grinder and mounted on said side sills above said pan, a grinder on said frame adapted to discharge into said pan, means to slide said frame and grinder carried thereon, and a closing plate located above the top of the said pan at each end and secured to and movable with the sliding frame forming slip joints for closing the top of said pan at each end of the frame, substantially as described.

1,350,692. WRINGER-CONTROL MECHANISM. OLIVER B. WOODROW, Newton, Iowa. Filed Apr. 30, 1918. Serial No. 231,610. 3 Claims. (Cl. 74—39.)

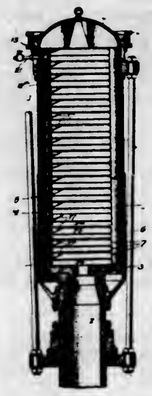
1. In a device of the class described, a support, a lever member pivoted thereon, having portions extending in opposite directions from its pivot, a lever pivotally mounted on said lever member, adapted in different positions of its pivotal movement to extend in substantially opposite directions from its pivotal point, means on said respective portions for coacting with said lever in its respective positions, whereby the movement of the lever may be caused to impart movement to said lever member, and a wringer having reversing mechanism operatively connected with said lever member.

1,350,693. ALARM-CLOCK. PETER BARLETTA, Lynbhurst, N. J. Filed Sept. 6, 1919. Serial No. 322,117. 3 Claims. (Cl. 58—19.)



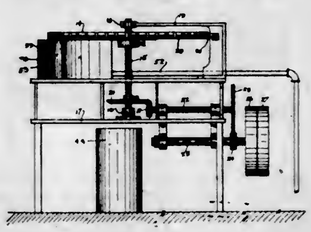
3. An electric alarm device of the class described comprising a clock, an electric bell, and electric light bulbs all placed in electric circuits, a switch device for controlling the circuits to said bell and clock, another swith for controlling the circuit to one of said bulbs and a switch device for controlling the circuit to the other of said bulbs, the first named bulb and said bell.

1,350,694. FILLER. WILLIAM H. ALTON, New York, N. Y., and ALBERT C. BATTELLE, Chicago, Ill., assignors, by mesne assignments, to Albert C. Battelle, Chicago, Ill. Filed Feb. 1, 1919. Serial No. 274,525. 2 Claims. (Cl. 134—58.)



1. A filler consisting of a mechanical mixture of chemically precipitated calcium carbonate with finely ground natural carbonate.

1,350,695. RADIOTELEGRAPHY. RALPH R. BEAL, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Oct. 8, 1917. Serial No. 195,259. 2 Claims. (Cl. 250—19.)

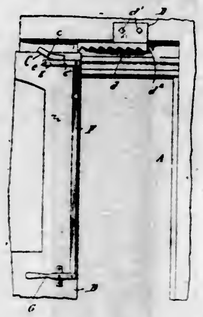


1. In a radio telegraphy transmission system, a source of oscillations, a radiating circuit and an absorbing circuit containing inductance both in parallel and shunted around said source, a circuit containing resistance arranged in shunt around said inductance, and means for opening and closing the resistance circuit.

1,350,696. VULCANIZING APPARATUS. OSCAR F. BECK, Lawndale, and JAMES W. SPEERS and ROBERT R. JONES, Akron, Ohio, assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 4, 1919. Serial No. 280,529. 30 Claims. (Cl. 18—17.)

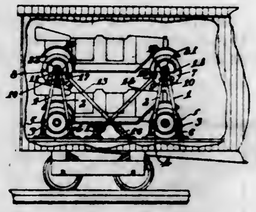
1. In combination with a vulcanizer having a movable platen, a source of pressure supply, a permanent distributing medium, and conduits leading from said medium to the several molds.

1,350,697. MACHINE FOR HARDENING KNIFE-BLADES. HERMAN BOCK, Meriden, Conn. Filed Dec. 5, 1919. Serial No. 342,637. 8 Claims. (Cl. 266—4.)



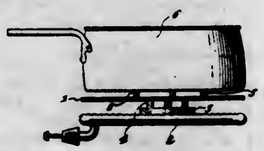
1. A hardening machine having a horizontally arranged work-carrying wheel, pivoted, spring-actuated, work-holding clamps carried thereby and constructed and arranged for exposing the part of the work to be hardened below the lower face thereof: means for automatically opening the said clamps for inserting the work prior to heating, and releasing it after heating; and a semicircular heating passage located below the plane of the lower face of the wheel in position to have the exposed lower portions of the work carried through it.

1,350,698. ELEVATOR-DOOR LOCK. FRANZ A. BOEDTCHER, Bergenfield, N. J. Filed Jan. 17, 1919. Serial No. 271,615. 4 Claims. (Cl. 292—233.)



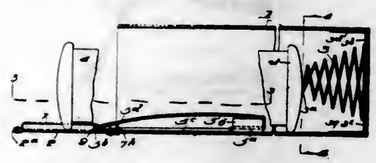
1. An elevator door lock embodying a serrated member adapted to be secured to a door casing, a coöperating gravity latch pivoted on the door associated with said casing, and adapted to normally gravitate into engagement with one of the serrations of said member, when the door is in closed or partially closed position, to lock the same against retrograde movement, a manually operable

push rod, and a member for operatively associating the push rod with the latch, said member serving to normally maintain the latch in a position to engage with the serrated member to lock the door in closed or partially



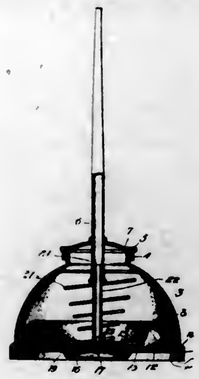
closed position, and being operable by the push rod to shift the latch against gravity free from the serrated member to unlock the door and allow of the opening thereof.

1,350,699. ADJUSTABLE FRAME FOR SHIPPING VEHICLES. GEORGE A. BOUVIER, Detroit, Mich. Filed July 9, 1919. Serial No. 309,566. 8 Claims. (Cl. 105—368.)



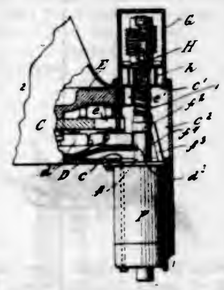
1. In a shipping frame for vehicles, a semicircular wheel receptacle for each vehicle wheel, a pair of metal tubes secured to each wheel receptacle extending outwardly therefrom at an angle to a vertical plane passing through the longitudinal axis of the vehicle and sockets on the lower ends of the said tubes in which the said tubes are adjustable.

1,350,700. GAS-SCREEN. THOMAS ABRAHAM BROOKS, Newton, Kans. Filed July 11, 1919. Serial No. 310,067. 1 Claim. (Cl. 126—215.)



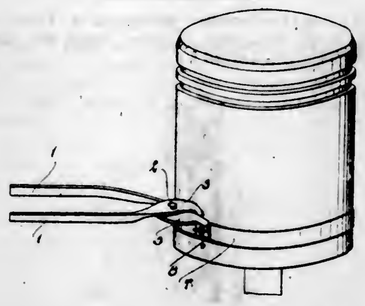
A device of the character described comprising a circular disk adapted to be supported above a burner and provided with a plurality of series of circular holes of uniform size and spaced apart at equal distances, the outermost series of holes having their centers lying at the periphery of the disk and being only semi-circular whereby the periphery of the disk will be serrated, a circular series of lugs rising from said disk, and a ring with upwardly projecting arms for supporting said disk.

1,350,701. CONTAINER FOR MUSIC-ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Sept. 23, 1919. Serial No. 325,645. 7 Claims. (Cl. 206—5.)



1. A container for rolls and the like comprising a tubular box closed at one end and open at the other end; a closure hinged at one edge of the open end of the box; a spring at the closed end reacting toward the open end for expelling the contents; a spring device having one end secured within the box at the side thereof, the other end engaging the closure at the inned side of the latter, and a slideway on said inner side extending transversely of the hinge of the closure to the box, with which slideway said spring device engages for drawing and yieldingly holding the closure to closed position.

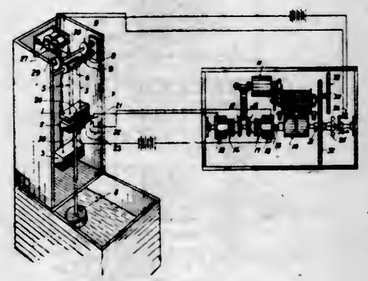
1,350,702. OIL-CAN. EDMUND S. CHURCH, Chicago, Ill. Filed Nov. 28, 1917, Serial No. 204,344. Renewed July 9, 1920. Serial No. 395,117. 7 Claims. (Cl. 221—48.)



1. In an oil can, the combination of a can body, a discharge spout connected to the body, a thumb plate disposed in the lower portion of the body, a flexible diaphragm having its margin secured to the body and its central portion secured to said plate and bowed between the plate and the body to permit continuous movement of the thumb-plate to discharge oil from the body, and a spring for retracting the thumb plate.

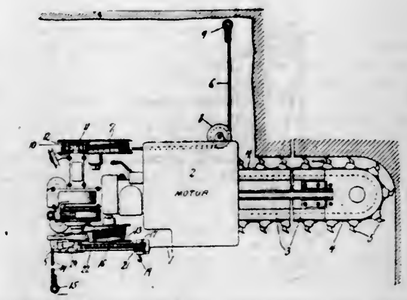
1,350,703. STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ALEXANDER CHURCHWARD, New York, N. Y. Filed May 28, 1919. Serial No. 300,483. 3 Claims. (Cl. 290—47.)

3. In combination, a transmission system, comprising a fly wheel and a stationary magneto coil support; an electric starting motor; a shaft driven thereby, and a bearing for said shaft located between the fly wheel and the stationary magneto coil support.



1,350,704. PISTON-RING CLAMP. EDWARD O. CLARK, Spokane, Wash., assignor of one-half to Edward S. Redeker, Spokane, Wash. Filed Sept. 2, 1919. Serial No. 321,071. 1 Claim. (Cl. 29—86.1.)

The combination with the pivoted, crossed handles having flat portions and outstanding pins fashioned with annular grooves, of an open band having end loops supported on the pins, and a spring clip for each pin projecting through a slot in the loop and engaging said grooves.

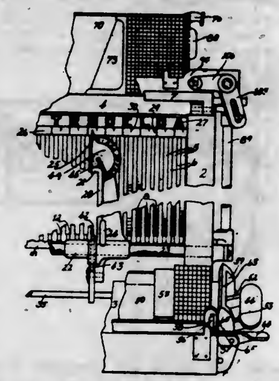


1,350,705. APPARATUS FOR RECORDING OR INDICATING THE MOVEMENTS OF A MASS. ATHOL WILFRIL CLARKE, Chorlton-cum-Hardy, near Manchester, England. Filed June 2, 1919. Serial No. 301,310. 5 Claims. (Cl. 234—10.)

1. Apparatus for recording remotely the movements of a body or mass comprising means for registering or recording the movements of the body or mass in combination with actuating mechanism adapted to act in both directions, an electro-magnet and a make and break contact acting in synchronism with the registering or recording mechanism to control the circuit of said electro-magnet, an escapement actuated by said electro-magnet, a measuring member, mechanism regulated by the escapement and controlled by the measuring member to actuate the switch of two electrical circuits which transmit operative power to controlling or actuating mechanism, the actuation of

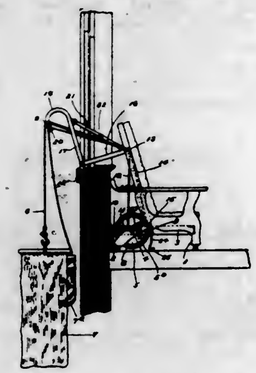
which determine the period and direction of movement of the registering or recording element, substantially as described.

1,350,706. MINING-MACHINE. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1911, Serial No. 636,383. Renewed Jan. 21, 1920. Serial No. 353,092. 1 Claim. (Cl. 262—30.)



A mining machine comprising a frame, a cutting device projecting therefrom, a feeding mechanism for feeding the cutting device laterally toward the material to be acted upon, a motor for actuating the feeding mechanism, a retarding device for retarding one end of said machine comprising a drum mounted on said frame and disconnected from said motor, a flexible power transmitting device connected with said drum and with a fixed part at a distance from the machine, a gear connected with said drum, a worm wheel operatively connected with said gear, a worm engaging said worm wheel, and means for manually rotating said worm so as to rotate said drum.

1,350,707. TYPESETTING-MACHINE. GEORGE P. DAVIS, Fresno, Calif. Filed Dec. 12, 1918. Serial No. 266,376. 27 Claims. (Cl. 276—3.)

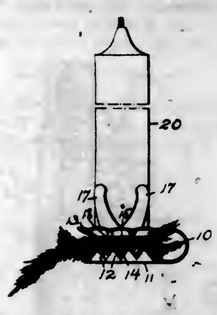


4. In a typesetting and distributing machine, a series of type channels each individually keyed to receive similarly keyed type, a holder for a block of "dead matter," a distributing mechanism adapted to intermittently move type in succession across the upper open ends of the channel, a setting up mechanism movable adjacent the lower ends of the channels, mechanism for ejecting a type from the lower end of any of the channels into the re-

ceiver, mechanism for ejecting a type at a time from the holder for "dead matter," and manual means for simulta-

neously operating the ejecting mechanism of the receiver and of the holder for "dead matter."

1,350,708. FIRE-ESCAPE. HANLEY M. DAVIS, Cambridge, Mass. Filed June 9, 1920. Serial No. 387,608. 1 Claim. (Cl. 227—9.)



A fire escape comprising, in combination, a chair or other portable carrier, a reel or drum mounted thereon carrying one or more ropes, a car or basket suitable to hold one or more persons suspended by said rope or ropes, braking means for retarding the unwinding revolution of said reel or drum, a rope by which an occupant of the car or basket is able to control said braking means so as to regulate the descent of the car or basket, and means for carrying said ropes up and over a window-sill and supporting them at a distance from the outer wall of a building comprising an extension device consisting of arms adapted to occupy an upstanding working position and provided with guides for the different ropes, radius bars in pivotal connection at their inner ends with the carrier and at their outer ends with said arms, and braces for said arms, said extension device adapted to rest upon a window sill when the fire escape is in use and to fold down out of the way at other times.

1,350,709. METHOD OF AND ARTICLE FOR ALLOYING TUNGSTEN. JOHN HOWARD DEPPELER, Weehawken, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Oct. 28, 1919. Serial No. 333,870. 3 Claims. (Cl. 75—1.)

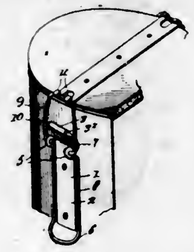
1. The method of forming an alloy of tungsten with another metal which comprises compressing tungsten powder into dense, coherent, self-sustaining tablets, and adding the tablets to the alloying metal.

1,350,710. CANDLE-HOLDER. CARL H. DIETZE, Jr., Newark, N. J. Filed Apr. 23, 1920. Serial No. 375,995. 1 Claim. (Cl. 248—42.)

A candle holder for Christmas trees and the like comprising a strip of easily bendable metal having its side edges at one end serrated and turned down to form parallel rows of outwardly projecting teeth, the other end being dished, the concave side of the dished part being on the opposite side to that from which the teeth project, the dished portion having slits therein, a second piece made of easily bendable metal having projecting arms adapted to lie normally flat and with the major portion of said arms within the dished portion and also adapted to be bent up to form a candle grasping means, said second piece having clips passing through and bent over in the slits of the first piece, the whole device being adapted to be transported and packed in substantially flat form and being bendable into supporting and grasping position when required for use.

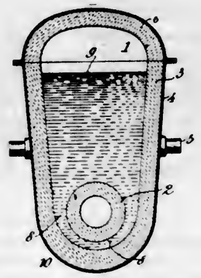
1,350,711. MARIONETTE. MATHURIN M. DONDO, New York, N. Y. Filed Mar. 3, 1920. Serial No. 363,000. 10 Claims. (Cl. 46—40.)

1. In a figure, movable organs and a joint between each pair of adjoining organs capable of permitting universal and at the same time arcuate movements of said organs and rigid means for moving said organs relative to one another.



1,350,712. BONNET. JEAN GOLDSMITH DUPONT, Chicago, Ill. Filed Jan. 15, 1917. Serial No. 142,352. 2 Claims. (Cl. 2—118.)

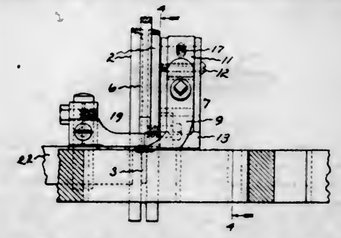
1. A bonnet consisting of a single flat piece of fabric having marginal holes therein and removable gathering



means comprising an elastic strip and a loose non-elastic covering around the elastic, both the elastic strip and covering extending through the marginal holes.

1,350,713. ELASTIC-SPRING-CLAMPING-CATCH HOLDER. GUY W. FERDON, Cresskill, N. J. Filed May 27, 1919. Serial No. 300,147. 3 Claims. (Cl. 292—247.)

2. A clamping and locking device comprising in combination, an ear piece adapted to be secured to a face of the part to be locked and having an outstanding ear piece having an ear at its end coiled therein in its own plane, a lever of stout wire doubled, having its ends pivoted in said ear, said lever being bent to form a nearly closed loop and thereby to form in its length a ball socket, said loops opening inward extending not so far as the ear socket, and having its inner faces both sides the loop adapted to be in the same plane as the ear piece, an elastic ball piece pivoted in said lever socket, and a hook coöperating with said ball piece.

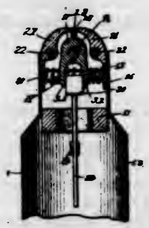


1,350,714. PROCESS OF TREATING METALS AND ALLOYS. CHARLES BRUCE FOLEY, Brooklyn, N. Y. Filed June 29, 1917, Serial No. 177,625. Renewed Jan. 19, 1920. Serial No. 352,638. 13 Claims. (Cl. 204—64.)

1. The process of treating molten metals which comprises reducing the metals to a molten state, passing an induced electric current through the mass, and maintaining at each locality of heat addition by said current a hydrostatic head which exceeds the vapor tension of the mass at the temperature there being generated.

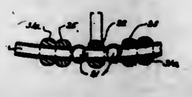
1,350,715. FEEDER FOR METAL-WORKING MACHINES. URI D. FOSTER and JOHN LITKE, Hartford, Conn., assignors to The Hart & Hegeman Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 17, 1919. Serial No. 283,120. 10 Claims. (Cl. 10—165.)

1. The combination of a chute to receive articles in the form of headed shanks, the chute supporting the heads of the articles for feed therealong, means for positively swinging forward away from the chute the lower



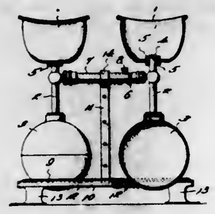
portion of the advance article emerging therefrom, and means for imparting a movement to the article in a direction transverse to its line of movement along the chute.

1,350,716. RELEASE-HOOK. ARTHUR E. FREEMAN, Toronto, Ontario, Canada. Filed Nov. 12, 1918. Serial No. 262,153. 13 Claims. (Cl. 9—23.)



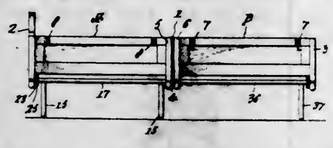
1. A device of the character described, having in combination, a holder, a pivot on said holder, a hook having two arms and mounted intermediate said arms on said pivot, one of said hook arms being provided with a circular aperture and with an open ended passage leading out of said aperture, and a locking stud rotatably mounted on said support and having a portion thereof projecting into the said aperture and flatted, the least width of said passage being greater than the least distance across said stud portion and less than the greatest distance across said stud portion.

1,350,717. POWER-OPERATED RAZOR. WARNIE ALBERT FUSCH, Decatur, Ill. Filed Oct. 31, 1919. Serial No. 334,743. 4 Claims. (Cl. 30—12.)



3. A razor of the character described comprising a frame, a shaft arranged centrally therein, a rocker cutter carried by the shaft and provided upon its forward side with a helical blade having oppositely arranged shearing edges, rearwardly spaced arms carried by the rocker cutter, means engaging the arms to oscillate them, a pair of shafts secured to the frame and arranged upon opposite sides of the first-named means, coacting blades pivoted upon the last-named shafts and having their forward ends extending across the rocker cutter and provided with spaced shearing edges slidably contacting with the helical blade, and yielding means to move the coacting blades into contact with the shearing blade.

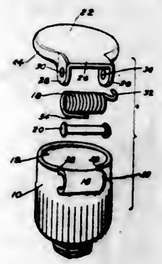
1,350,718. FASTENING DEVICE. THOMAS R. GAINES, Norwood, Ohio. Filed Sept. 15, 1917, Serial No. 191,639. Renewed July 8, 1920. Serial No. 394,806. 10 Claims. (Cl. 24—128.)



8. A fastening device including a hollow expansible member, an arresting element of larger caliber adapted to be impelled through said member against a loop or bend on the run thereof, a check adapted to be positioned adjacent to said element, and a compressing lock slidable upon the exterior of the member contiguous to said check.

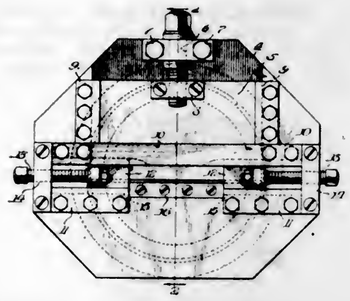
1,350,719. EYE SYRINGE AND MASSAGE DEVICE. EDWARD H. GALLIGAN, Providence, R. I. Filed Nov. 3, 1917. Serial No. 200,143. 1 Claim. (Cl. 128—249.)

An eye syringe comprising a pair of cups, a tube for each cup, a bulb associated with the end of each tube, each tube projecting through an opening in the cup supported thereby and having its upper end threaded, a collar on each tube for supporting the bottom of said cup, a nut associated with the threaded end of said tube, means for connecting the cups for lateral adjustment, and a support to both of said cups.



1,350,720. COMBINED FOLDING BED AND BUREAU. ALEXANDER GHITTINO, New York, N. Y. Filed Mar. 26, 1919. Serial No. 285,176. 3 Claims. (Cl. 5—52.)

1. An article of convertible furniture involving a folding bed and bureau including companion sections hinged together for collapse, columns journaled to rotate on the bottoms of said sections, legs secured to said columns and adapted to fold against the bottoms of the sections, locking plates carried by and rotatable with said columns and having perforations therein, spring-pressed latches carried by said sections and arranged to engage through the perforations in said plates for locking the legs either in the operative or folded positions, the ends of the latches being exposed through the perforations for engagement to retract said latches, and means for preventing the escape of the latches through the perforations.

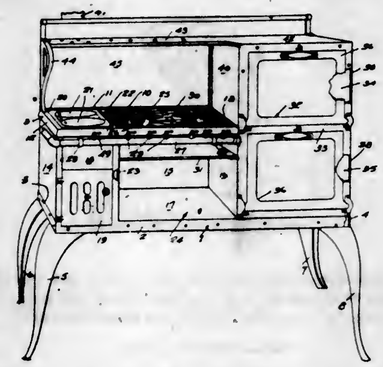


1,350,721. OIL-CUP. JULIUS P. GITS, Chicago, Ill. Filed Dec. 15, 1919. Serial No. 345,024. 3 Claims. (Cl. 184—91.)

2. An oil cup including a body having a projecting integral hinge inclosing strip of metal initially extending from one side thereof, then laterally bent first outwardly then downwardly to form a retaining device on the side of the cup for the pivot mechanism of the hinge, a cover over the top of the cup, having ears extending to the sides of said strip, a spring with a pivot pin inclosed therein

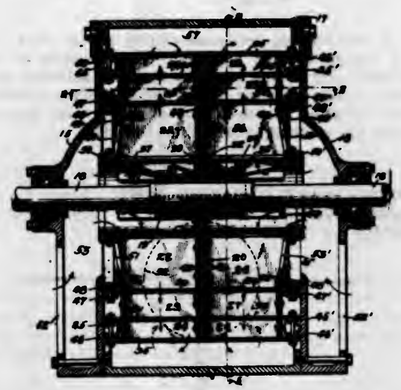
mounted inside the strip member with the ends of said pivot pin in engagement with said lugs on the cover, while the ends of the spring are detachably locked one to an ear on the cover, the other between the end of the inclosing strip and the body of the cup, so that it will force the cover closed, for the purposes set forth.

1,350,722. ADJUSTABLE DIE FOR RUBBER-EXTRUDING MACHINES. DANIEL E. GOODENBERGER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 11, 1919. Serial No. 329,954. 3 Claims. (Cl. 19—12.)



1. In a machine for extruding rubber or similar material a die, a guideway on the face of the die, a plate slidably mounted in the guideway, means for adjusting the plate to project over the mouth of the die to a greater or less extent, and laterally adjustable plates to vary the width of the opening.

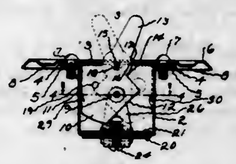
1,350,723. COMBINED GAS AND COAL RANGE. CLARENCE R. GRAHAM, Newark, Calif. Filed Sept. 15, 1919. Serial No. 323,823. 2 Claims. (Cl. 126—36.)



1. A combined gas and coal range having a bottom structure with corner legs, a firebox in one end of the bottom, a top for said box, superposed baking and broiling ovens on the other end of said bottom and spaced horizontally from the fire-box to provide a chamber having an open front and a closed back therebetween, a set of gas burners arranged at the top of said chamber, a plane grating coplanar with the said top and above the gas burners, a drip pan below the burners and forming a

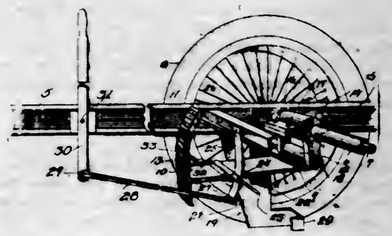
top for said chamber between the said box and said ovens, one of the ovens being below and the other above the

plane of said burners, and a gas service pipe extending along the front of top structure and having a kindling burner to the fire-box.



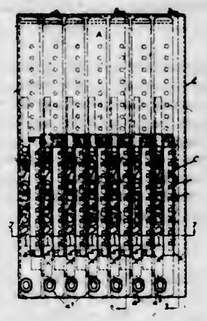
1,350,724. MULTISTAGE CENTRIFUGAL BLOWER. THOMAS W. GREEN, Trenton, N. J. Filed Aug. 9, 1918. Serial No. 249,079. 27 Claims. (Cl. 253—189.)

1. In a centrifugal fluid pump, a pair of coaxial, cylindrical fixed partitions of different diameter having ports out of line radially, in combination with a rotor having vanes at an angle to the radii, the inner and outer surfaces of the vanes, considered radially, being of smaller circumferential extent than the ports so that they are incapable of covering the edges of adjoining port openings and bearings for the rotor.



1,350,725. ELECTRIC SWITCH. MONROE GUETT, Hartford, Conn., assignor to The Hart & Hegeman Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed July 15, 1919. Serial No. 310,934. 4 Claims. (Cl. 200—162.)

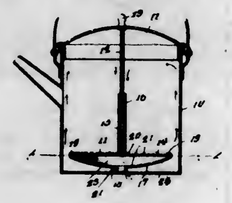
4. An electric switch comprising a case provided with a cover having an opening, a flat segmental carrier of insulating material, in the case, an operating arm for the carrier, rigidly associated therewith and extending through said opening in the cover, a pivot connected with the segmental carrier approximately at its junction with said arm, the cover having means to support the pivot and thus permit oscillation of the carrier by said arm, contacts in the case, and a rivet supported by the



carrier and constituting a switching member, the arm as it is rocked causing the switching member to move between and into engagement with said contacts and then out of such engagement.

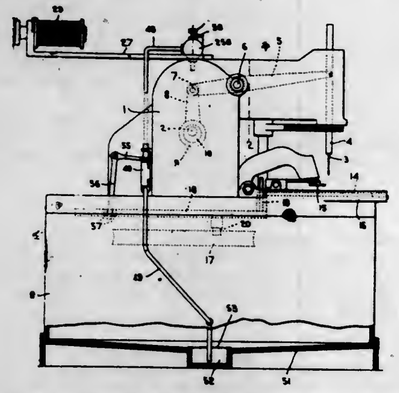
1,350,726. BRAKE ATTACHMENT FOR AUTOMOBILES. HENRY WALLEMAR HAAPANEN, Telluride, Colo. Filed Aug. 5, 1919. Serial No. 315,500. 6 Claims. (Cl. 188—5.)

5. In a device as herein characterized, in combination, a road engaging shoe pivotally suspended from the underframe of an automobile and positioned to engage the ground by a swinging movement inside the vertical plane of the vehicle wheel, a rigid stop carried by the underframe and projecting across the path of said shoe to limit its rearward swing, the active end of said shoe extending radially beyond the circumference of the vehicle wheels, and common means for holding said shoe in inactive position and to release the same for action.



1,350,727. COMPUTING-MACHINE. ALTON D. HARMON, Erie, Pa., assignor of one-third to John S. Owen and one-third to Annie W. S. Strong, Erie, Pa. Filed Feb. 10, 1919. Serial No. 276,148. 3 Claims. (Cl. 235—69.)

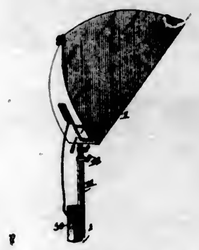
1. In a calculating machine, a face plate having a slot therein, a back plate, an adding slide between said face and back plates under said slot, a longitudinally



movable transfer signal slide between said face plate and said adding slide, an ear on one end of said transfer signal slide extending across said slot and another at the opposite end thereof extending across the next adjacent slot in said face plate, substantially as set forth.

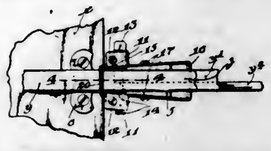
1,350,728. MEANS FOR ESTABLISHING AUXILIARY CONVECTION IN LIQUID-CONTAINERS. OTTO E. HUEBNER, Brooklyn, N. Y. Filed Jan. 23, 1915. Serial No. 4,001. 2 Claims. (Cl. 53—8.)

2. In combination, a container, an inverted cone member located centrally within the container, a tubular member extending upright from the cone member, a cover for the container, and a rod depending from the cover to enter the tubular member to support the cone member and to permit vertical adjustment of the latter.



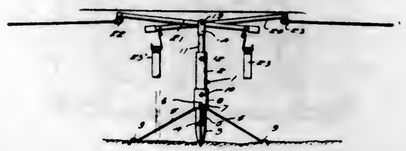
1,350,729. BUTTONHOLE-SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Aug. 7, 1916. Serial No. 113,444. 2 Claims. (Cl. 112—256.)

2. In a buttonhole sewing machine, the combination with a frame carrying stitch-forming mechanism, of a work clamp, means for actuating the work clamp to feed the work, operating means for the stitch-forming mechanism, an oil reservoir situated above said operating means, means to deliver oil from said reservoir to the operating means to lubricate the same, a pump secured to said frame, and means actuated by the work-clamp-feeding means to operate the pump.



1,350,730. FLASH-LIGHT BAG. GEORGE ALBERT LEY, Chicago, Ill. Filed Mar. 11, 1918, Serial No. 221,822. Renewed July 13, 1920. Serial No. 395,994. 13 Claims. (Cl. 67—30.)

1. In a flashlight bag, a hood supporting staff, shank, a collar slidable on the shank and having a pivotal connection to the staff, ribs radiating from the slidable collar, a brace collar affixed to the lower end of the shank, braces radiating from said collar and pivotally connected to the respective ones of the ribs, and a connecting link

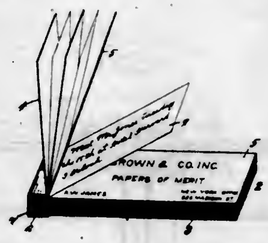


pivotally secured between the brace collar and the staff, adapted to be moved past the dead center when the hood is opened, to retain the hood in the open position.

1,350,731. WELT-FORMING DEVICE. ANTON W. LILJEBERG, Minneapolis, Minn. Filed June 12, 1919. Serial No. 303,669. 6 Claims. (Cl. 12—67.)

4. A welt-forming device comprising a base block having a bed plate, knife holders movably mounted on the base block and having clamping heads, a splitting knife carried by said clamping heads, and means for simultaneously adjusting the knife holders to vary the distance between the splitting knife and the bed plate.

1,350,732. CATTLE-GRAZING POST. LUKE C. McKENZIE, Clinton, N. C. Filed Jan. 17, 1920. Serial No. 352,136. 1 Claim. (Cl. 119—117.)

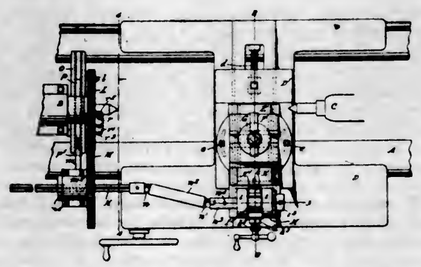


A cattle grazing post comprising a sleeve, a penetrating point secured to one end of the sleeve, a cuff mounted on the sleeve, means for holding the cuff in adjusted position, anchoring arms pivotally carried by the cuff, hooked ends formed on the lower terminal of the arms, a rod adjustably mounted on the upper end of the sleeve, attaching members rotatably carried by the upper end of the rod, arms pivotally secured to the members intermediate their ends, loops attached to one end of the arms and weights attached to the opposite end of the arms, as and for the purpose specified.

1,350,733. COMBINATION CARD AND MEMORANDUM-BOOK. EUGENE A. OLSON, East Hartford, Conn. Filed Nov. 22, 1919. Serial No. 339,881. 1 Claim. (Cl. 281—38.)

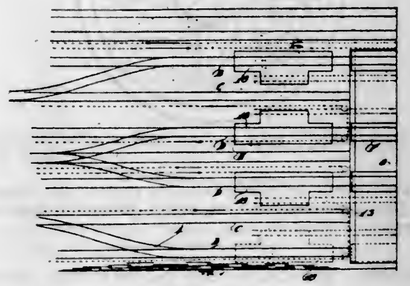
A combination card and memorandum book comprising cards, each card having a stub and a printed card portion removably connected with the stub, means for binding

the stubs and therefore the cards together, and writing sheets held in the book by the binding of the stubs and each card being interposed between two sheets to thus in-



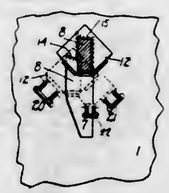
close the same and therefore to protect the printed surfaces thereof, the stock of the writing sheets being thinner than that of the card members.

1,350,734. MEANS FOR ELECTRICALLY MARKING UPON METALS. WILLIAM S. OVERLIN, Portland, Oreg. Filed Nov. 24, 1919. Serial No. 340,175. 1 Claim. (Cl. 175—265.)



An electric pen, comprising a core, a wire coiled around said core, means to connect one end of said wire to an electric circuit, the other end of said wire being bent out and back to form a spring, and a marking point carried by the end of said spring portion of the wire.

1,350,735. RELIEVING ATTACHMENT FOR LATHES OR THE LIKE. BURLAND J. PHILLIPS, Buffalo, N. Y. Filed Mar. 26, 1919. Serial No. 285,319. 22 Claims. (Cl. 82—19.)

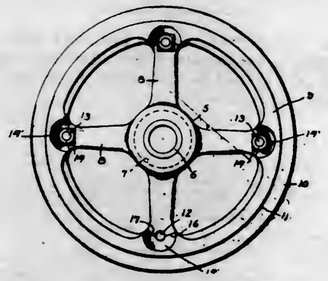


1. In a relieving attachment for a lathe, the combination with a face plate, of a slide base member, a slide member movable relatively to said base member, a cam on one of said members, and means for driving said cam from said face plate to cause said slide member to move relatively to said slide base member.

1,350,736. GRAIN-UNLOADING PROCESS AND GRAIN-CAR TRACK CONSTRUCTION. HENRY RICHARDSON, Passaic, N. J. Filed Nov. 22, 1919. Serial No. 339,819. 5 Claims. (Cl. 214—50.)

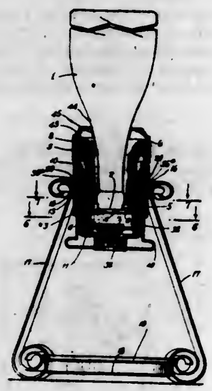
1. In an apparatus of the character described and in combination a plurality of parallel tarcks, transverse tracks set at the end of the parallel tracks and extending across the same, a transversely movable table mounted on the transverse track and adapted to convey a car from one to the other of the parallel tracks, and means for collecting grain from the table during movement.

1,350,737. TELEPHONE-OPERATING DEVICE. WILLIAM H. RIESS, Cincinnati, Ohio. Filed Mar. 2, 1917. Serial No. 152,104. 3 Claims. (Cl. 179—164.)



1. In telephone operating devices, electric communication between an exchange and individual telephones, a cut out and a receiver and connecting parts, and independent means for enabling the exchange to raise or lower said cut out, whether the receiver is on or off or the line is in or out of use.

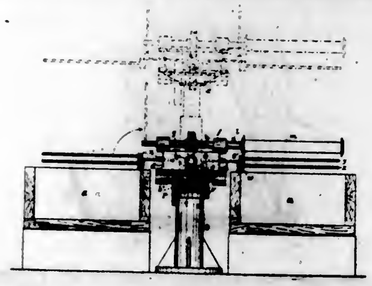
1,350,738. CAR-WHEEL. RUDOLPH ROMADKA, Milwaukee, Wis. Filed Nov. 2, 1918. Serial No. 260,864. 3 Claims. (Cl. 295—19.)



1. A wheel of the character described comprising, a hub; spokes radiating from said hub; a rim adapted to be arranged over said spokes and having transversely extending semi-circular recesses in its inner surface; shoulders formed on the opposite sides of said semi-circular recesses, said shoulders being inclined longitudinally and curved transversely; enlarged heads formed on the

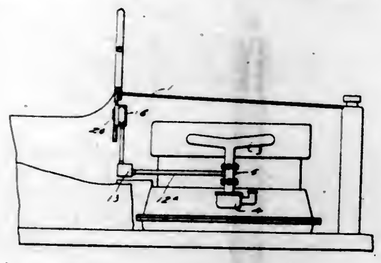
outer ends of said spokes being adapted to interlock with said shoulders, said heads having semi-circular recesses

formed therein and alining with the semi-circular recesses of said rim; and bolts adapted to extend through said recesses.



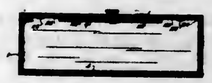
1,350,739. MEASURING LIQUID-DISPENSER. ALONZO N. ROSE, Mount Vernon, N. Y. Filed Feb. 18, 1916. Serial No. 79,106. 22 Claims. (Cl. 221—115.)

3. In a measuring dispenser for liquids, the combination of a support for the inverted bottle, a measuring chamber surrounding the lower end of the support and into which the mouth of the inverted bottle projects so that the rising of the liquid within the chamber automatically seals the mouth of the bottle to stop the flow therefrom, the said bottle support and measuring chamber being relatively adjustable to vary the distance between the mouth of the bottle and the bottom of said chamber to vary the quantity of liquid measured by the said chamber, means for drawing off the liquid from the measuring chamber, a cut off device adapted to cut off the flow of liquid from the bottle when the said drawing off means is opened, the said cut off device being operatively connected with said drawing off means.



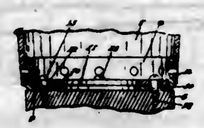
1,350,740. DYEING-MACHINE. EMIL SCHNUBBENBERGER, Paterson, N. J. Filed Jan. 9, 1920. Serial No. 350,273. 12 Claims. (Cl. 8—19.)

1. In a machine for treating skeins with liquids, the combination, with a vat for the liquor of treatment, of means to support a skein pendent in and to cause the skein to trail through the liquor including a skein-trailing mem-



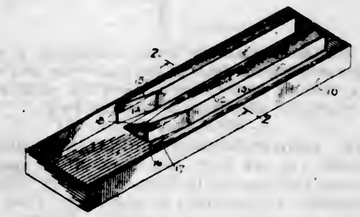
ber movable laterally in substantially a plane, and means to move said member in said plane.

1,350,741. SAFETY AUTOMOBILE-LOCK. JOHN GEORGE SCHWARTZ, New York, N. Y. Filed Apr. 6, 1920. Serial No. 371,652. 2 Claims. (Cl. 123—198.)



1. An automobile lock comprising an auxiliary housing, a lock housing, an angular casing connecting said housings, a self-closing valve in said auxiliary housing, a lock in said lock housing, a series of rods and bell crank levers in said casing for connecting the valve to the lock, and means connecting the lock to the switch of an ignition system.

1,350,742. DEPOSIT AND COLLECTION RECEPTACLE. MAX S. SHOLL, Chicago, Ill. Filed Apr. 21, 1919. Serial No. 291,685. 1 Claim. (Cl. 194—94.)

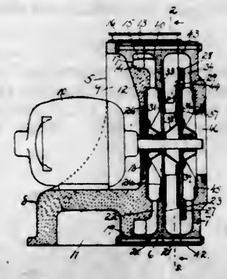


As an article of manufacture, a slotted casing provided with a removable drawer, a circular shafted rotary disk arranged within said casing and formed with peripheral markings adapted to be displayed individually and consecutively through one of the slots in said casing as said disk is rotated, lugs peripherally arranged upon said disk and alining with said peripheral markings, a coin passage within said casing, a rock bar fulcrumed to the shaft of said disk, a weight terminally carried by said rock bar to yieldingly retain the same in engagement with said coin passage, means fulcrumed to said casing and releasably engaging said drawer for normally retaining the same within said casing, a head peripherally carried by said disk for operative engagement with the last named means at each revolution of said disk, and a finger carried by said rock bar for engagement successively with said lugs.

1,350,743. ARTIFICIAL LIMB. GUSTAF SKOGLUND, Minneapolis, Minn. Filed May 12, 1920. Serial No. 380,797. 2 Claims. (Cl. 3—2.)

1. In an artificial limb, two adjacent limb members, a plate having a flange adapted to be fixed to one of said members, said plate having arc shaped slots therein, adjusting screws adapted to engage said slots and be secured in the other limb member.

1,350,744. SPACER FOR DISPLAY BOXES OR CARTONS. SIDNEY H. SONN, New York, N. Y. Filed May 24, 1920. Serial No. 383,835. 2 Claims. (Cl. 229—15.)



1. A blank for tie blocks, consisting of a rectangular piece of foldable material divided into parallel sided strips by fold lines disposed in pairs alternately on one side and the other on the blank, said blank further having slits formed at one end in alinement with certain of said fold lines and having triangular portions defined on certain of the strips by diagonal lines extending from the inner ends of certain slits.

2. A tie block consisting of a blank formed from a rectangular piece of foldable material divided into parallel sided strips by fold lines disposed in pairs alternately on one side and the other on the blank, said blank further having slits formed at one end in alinement with certain of said fold lines and having triangular portions defined on certain of the strips by diagonal lines extending from the inner ends of certain slits, said block being formed from said blank by bending the strips in threes to constitute ribs, bringing the free ends of the sides of the ribs together, bending the triangular portions of the blank down over said free ends and securing said triangular portions in place.

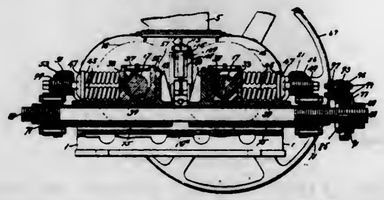
1,350,745. ROTARY AIR-PUMP. IRA H. SPENCER, West Hartford, Conn., assignor to The Spencer Turbine Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 8, 1918. Serial No. 257,365. 11 Claims. (Cl. 230—11.)

1. A rotary air pump case comprising a number of sections of plastic material hardened, said case having fluid passages, members formed of a material different from that comprising the case secured within the material composing the case and extending into said passages, a

shaft supported within the case, and a fan secured to said shaft.

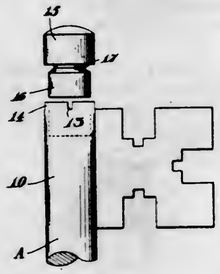
1,350,746. LATHE-CHUCK. HEINRICH SPILLMANN, Zurich, Switzerland. Filed Sept. 28, 1918. Serial No. 256,052. 1 Claim. (Cl. 279—114.)

A lathe chuck comprising a circular casing having radial grooves and a central hub, a driving plate secured to said hub, a machine surfaced plate revolubly mounted on said hub and having a flat spiral groove in its face, a spiral guide of harder metal in said groove, clamping jaws radially movable in the grooves of said casing and having teeth engaging said guide, and means to rotate said grooved plate.



1,350,747. BALL-JOINT PISTON-CONNECTING ROD. FRANCIS J. STENGER, Detroit, Mich., assignor of one-half to Leo James Goyette, Detroit, Mich. Filed Aug. 30, 1919. Serial No. 320,819. 6 Claims. (Cl. 74—108.)

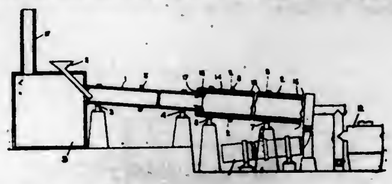
1. In a piston connecting rod ball joint and bearing, a ball carried by said rod, a hemispherical recessed seat in the piston to receive said ball, said seat adapted at its outer opening to receive a threaded lock-nut, the face of said seat provided with perforations circumferentially arranged, a lock-nut formed in halves overlapping said per-



forated face slotted and threaded to receive a dowel screw adapted to seat in any one of said perforations so as to maintain said lock-nut in its adjusted relationship with said ball seat, and means for locking said dowel screw.

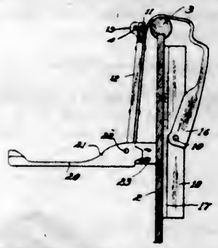
1,350,748. CRUSHING-ROLL MACHINE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1917. Serial No. 148,407. 17 Claims. (Cl. 83—12.)

3. A machine of the character described, comprising, in combination, a bed, carriages slidably mounted on said bed, a pair of opposed crushing rolls carried by said carriages, a pair of adjusting shafts threaded to both of said carriages, worm wheels on said shafts adjacent one end of said base, a cross shaft having worms meshing with said worm wheels simultaneously to rotate said adjusting shafts to vary the space between said crushing rolls, heads connected to said shafts adjacent one end of said bed, and means detachably to secure said heads to said bed to confine said adjusting shafts against axial movement.



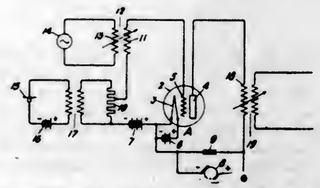
1,350,749. KEY. GEORGE ALEXIS SYLVAIN, Ottawa, Ontario, Canada. Filed November 18, 1919. Serial No. 338,838. 2 Claims. (Cl. 70—9.)

1. A key having a shank with a recess formed in the end of the same, and a projecting flange formed with radial cuts dividing it into a plurality of tongues, adapted to be bent inwardly, a plug having a reduced portion to fit the recess, and formed with a groove adapted to be engaged by the tongue when bent inwardly.



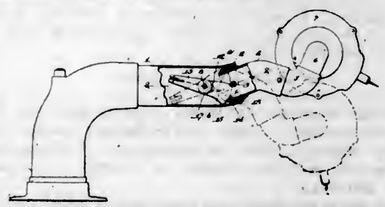
1,350,750. ROTARY KILN. ARTHUR E. TRUESDELL, Rutland, Vt., and LEWIS F. PHILLIPS, West Stockbridge, Mass. Filed Oct. 20, 1916. Serial No. 126,789. 4 Claims. (Cl. 222—7.)

1. In a rotary kiln, the combination with a rotatable cylindrical burning chamber, of means to deliver combustible gas and primary air to the lower end of said chamber, a jacket surrounding a portion of said chamber and open at one end to the atmosphere, and means constituting a communication between the other end of said jacket and the burning chamber at a point intermediate of



its ends whereby heated secondary air will be delivered to said burning chamber.

1,350,751. WINDSHIELD-CLEANING DEVICE. EDWARD A. TVERDAHL, Evanston, Ill. Filed Aug. 14, 1919. Serial No. 317,524. 3 Claims. (Cl. 15—59.)



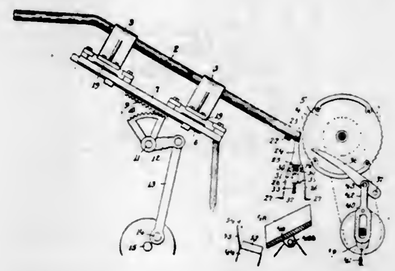
1. A windshield cleaning device comprising a guide, means for securing the guide to the upper edge of a windshield, a cleaning device slidable along the guide and a folding handle for operating the cleaning device.

1,350,752. HIGH-FREQUENCY SIGNALING. HENDRIK JOHANNES VAN DER BIJL, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Aug. 21, 1915. Serial No. 46,643. 38 Claims. (Cl. 179—171.)

1. The method of modulating carrier waves which consists in generating carrier waves of substantially constant amplitude, and invariably amplifying the amplitude of said carrier waves in accordance with a signal.

1,350,753. TONE-ARM FOR TALKING-MACHINES. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed Jan. 17, 1918. Serial No. 212,236. 7 Claims. (Cl. 274—23.)

1. A tone-arm having a pivoted member, a spring actuated lever within the tone-arm for securing the member



in a predetermined position, said member extending within the tone-arm to engage the lever and adapted to move the same to release the member.

1,350,754. SPRING-RETAINER. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed Mar. 10, 1919. Serial No. 281,776. 6 Claims. (Cl. 185—45.)

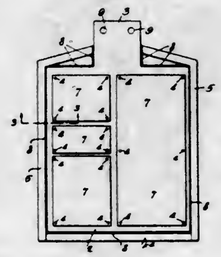
5. A device of the character described, comprising a spring barrel, a shaft, a spring wound in spiral form within the barrel, means for attaching one end of the spring to the barrel, means on the shaft for attachment of the other end of the spring, and a member between the spring and the barrel, said member engaging the spring for the major portion of the outer periphery of the spring and of the inner periphery of the barrel, for retaining the spring in circular form.

1,350,755. WASHER-COUNTER. JOSEPH E. VINCENT, Cambridge, Mass., assignor of one-half to Missak Movsessian, Cambridge, Mass.; Edith L. Vincent administratrix of said Joseph E. Vincent, deceased. Filed Feb. 13, 1919. Serial No. 276,857. 10 Claims. (Cl. 214—1.)

3. The combination with means for manipulating annular articles, of an inclined rod presenting its lower end to said means, and supporting means for the rod consisting of two sets of gripping jaws each acting to grip the rod and hold it while the other releases it.

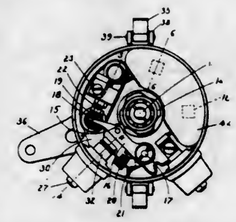
1,350,756. FOOD COMPOUND AND PROCESS OF PREPARING THE SAME. ARNOLD S. WAHL, Wheaton, Ill., assignor to The Arnold Wahl Institute, Chicago, Ill., a Corporation of Illinois. Filed Feb. 26, 1919. Serial No. 279,314. 17 Claims. (Cl. 99—10.)

14. The process of preparing food compounds which consists in forming a mash of starchy material and malt and holding the same at a temperature of approximately 60° C., to effect diastatic conversion forming a mash of wheat bran, lactic acid, and malt, and holding the same at a temperature of approximately 45° C., to effect proteolic conversion, subsequently combining said mashes, holding the combined mash at a temperature of at least 60° C., and drawing off the extract liquor.



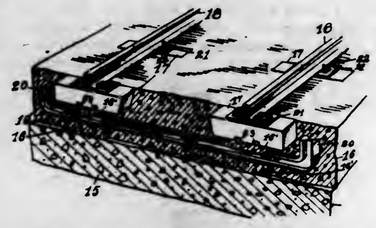
17. A fermentative food compound consisting of an aqueous extract of proteid and starch conversion products having a total solid content of at least 70%, a total acidity of at least 1.3%, whereof at least 0.8% is free lactic acid, and at least 80% of the solids being maltose.

1,350,757. SPARK-PLUG. CHARLES A. WELLMAN, Chicago, Ill., assignor to Wellman-Muter Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1918. Serial No. 215,297. 8 Claims. (Cl. 123—169.)



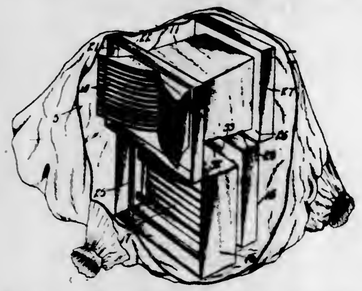
1. In a spark plug the combination with a shell, of a spark terminal thereon, an insulation core disposed in said shell, a second spark terminal supported by said insulation core, and a plurality of cleaning members on said second spark terminal normally disposed above and below said first spark terminal.

1,350,758. CASE FOR MATRIX-CARRIERS. WILLIAM H. WELSH, Collingswood, N. J. Filed Jan. 9, 1920. Serial No. 350,427. 6 Claims. (Cl. 204—5.)



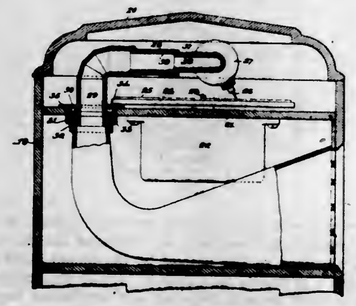
1. A protective frame for an electroplate backing consisting of a structure of insulating material formed to removably receive an insulated backing plate.

1,350,759. CIRCUIT-CONTROLLER. ANTHONY F. WILLIAMS, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed June 9, 1917. Serial No. 173,838. 7 Claims. (Cl. 200—19.)



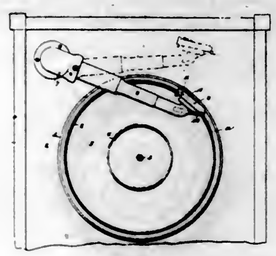
5. A circuit-controller having, in combination, a cup-shaped housing; a removable cap mounted on the housing; a plate fixed to the bottom of the housing and provided with a plurality of integral lateral projections of which one constitutes a lever-arm by which the housing may be turned, other of said projections being provided with pivot-lugs; and cap-retaining springs attached to said pivot-lugs and coöperating with said cap.

1,350,760. METHOD FOR BUILDING REINFORCED RAILWAY-BEDS. LYDELL L. WILSON, Randolph, N. Y. Filed Aug. 8, 1919. Serial No. 316,057. 6 Claims. (Cl. 238—7.)



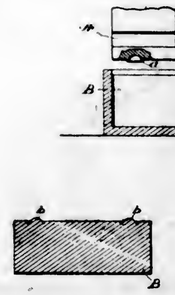
1. The method of building railway tracks which consists in providing a suitable concrete foundation, setting up thereon rail cushion blocks in spaced pairs and a bar under each pair of cushion blocks crosswise of the track on concrete blocks, attaching the track rails in parallel alinement on said cushion blocks, holding said rails in correct spaced alinement by removable spacing bars, and flowing the concrete around said bars and blocks to form a top railway bed on said concrete foundation.

1,350,761. FILM-DEVELOPING TANK. GILMER WINSTON, Memphis, Tenn. Filed July 10, 1919. Serial No. 309,856. 12 Claims. (Cl. 95—90.)



1. A developing apparatus comprising a pack composed of a plurality of spaced shelves one exposed edge of each shelf being straight and its opposite edge being curved, and light-excluding liquid-admitting means inclosing the film pack for further operation.

1,350,762. TALKING-MACHINE. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Oct. 25, 1915. Serial No. 57,740. 8 Claims. (Cl. 181—5.)



1. A sound conveyer for talking machines, comprising a sound passage, there being a plurality of confined air spaces surrounding said passage.

1,350,763. INDICATOR FOR PHONOGRAPH-REPRODUCERS. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Mar. 9, 1918. Serial No. 221,550. 5 Claims. (Cl. 274—9.)

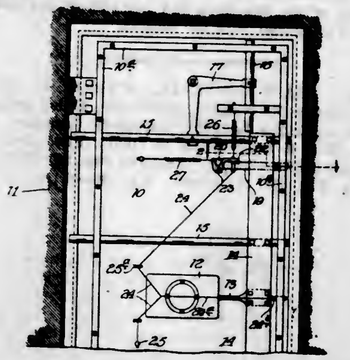
1. A talking machine having a record disk, there being a record groove in the disk, a sound-box having a stylus for engagement with the groove, and means situated at the same distance from the center of the turn-table shaft as is the stylus and in proximity to that portion of the record groove adapted to be engaged by the stylus for indicating when the stylus is in position to engage the groove.

1,350,764. PAVING-BRICK AND METHOD OF MAKING THE SAME. FRANK W. WOOD, Indianapolis, Ind., assignor to The Danville Brick Company, Danville, Ill., a Corporation of Illinois. Filed Dec. 29, 1914. Serial No. 879,518. 2 Claims. (Cl. 25—102.)

1. A paving brick having projections on its side with each projection surrounded by a recess extending into the body of the brick at the base, substantially as set forth.

2. The method of forming paving brick with projections on the side which consists in first forming the brick and then subjecting them to a re-pressing operation under a die having depressions surrounded by projecting cup-shaped rims, substantially as set forth.

1,350,765. UNDERREAMER. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 5, 1920. Serial No. 371,320. 5 Claims. (Cl. 255—75.)

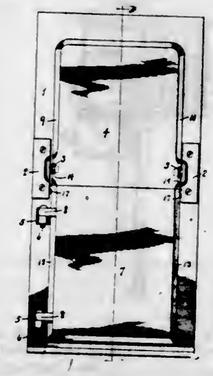


1. In an underreamer, a pair of opposed expanding cutters having tangs, a body with a bottom recess for the said tangs, means preventing the longitudinal movement of one cutter, a spring controlled rod longitudinally movable in the body, and a head on the end and in recesses in opposing faces of the tangs, the head being seated

against the inner ends of the recesses when the cutters are expanded, the recess in the fixed cutter permitting

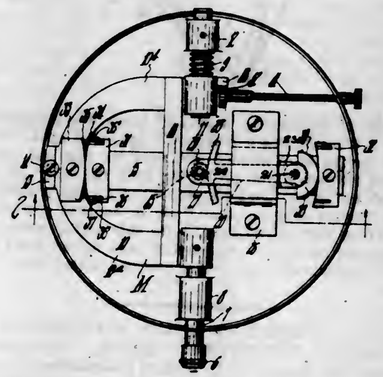
the said head to travel as the other cutter is moved longitudinally out of the body.

1,350,766. AUXILIARY SAFE-LOCK. ADRIAN S. AILES, Chicago, Ill., assignor of sixty per cent. to John H. Taft, Chicago, Ill. Filed Jan. 20, 1920. Serial No. 352,701. 4 Claims. (Cl. 109—8.)



1. In combination, a safe having a door, a main lock thereon, an auxiliary lock bolt, a detent normally holding said auxiliary lock bolt in an inoperative position, means tending to force the auxiliary lock bolt into operative position, means tending to disengage said detent, a flexible member secured at one end to said detent and at the other to a stationary member whereby said flexible member when severed will release said auxiliary lock bolt.

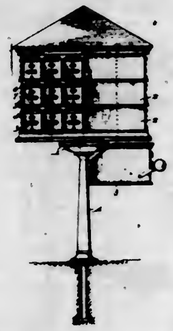
1,350,767. STETHOSCOPE. FREDRICK C. ASCHBURNER, Chicago, Ill. Filed May 28, 1919. Serial No. 300,461. 4 Claims. (Cl. 181—24.)



1. The combination with a stethoscope, of tubes projecting thereinto, and a set screw for retaining said tubes in adjusted position, said set screw in certain positions thereof adapted to permit said tubes to be slidably adjusted.

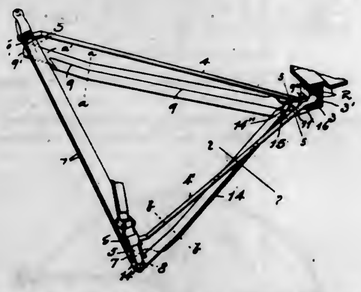
1,350,768. STOVE-DOOR. WILLIAM T. BARBOUR and WILLIAM L. MERSFELDER, Detroit, Mich., assignors to Detroit Stove Works, Detroit, Mich., a Corporation of Michigan. Filed May 26, 1919. Serial No. 299,790. 5 Claims. (Cl. 126—190.)

1. In a door construction, the combination of a casing having a pair of lugs and a door hinged thereon to swing on a vertical axis, a pair of brackets attached to the casing and positioned just above said door and having pintles in horizontal alinement parallel to the casing, a second door mounted on said pintles and having its face substantially uniform with the face of the lower door, said casing having a cross bar adapted to be engaged by the lower edge of the face of said upper door when swung down to open position.



1,350,769. THICKNESS-GAGE. HENRY B. BARTLETT, Holyoke, Mass., assignor to B. F. Perkins & Son, Inc., Holyoke, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1919. Serial No. 283,772. 6 Claims. (Cl. 33—172.)

1. In a measuring instrument, a contact element, indicating means, and means for connecting the latter and said element, said connecting means including a slidable archlike yoke with one end of which said element is associated, a lever pivoted to swing substantially in the plane



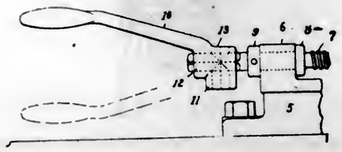
of movement of the yoke and having one end received within the arch thereof, means connecting such end and yoke for relative rolling movement, and means connecting said lever to the indicating means.

1,350,770. COMMUNITY-MAIL-BOX SUPPORT. WILLIAM B. BATES and EDWARD L. STONE, Roanoke, Va. Filed Feb. 3, 1917. Serial No. 146,454. 3 Claims. (Cl. 232—40.)

1. A community mail-box comprising a post, a base, rotatably supported on the upper end thereof, a sectional superstructure mounted on the base having a plurality of recesses extending in four different directions from a common center and individual mail-boxes located in these recesses.

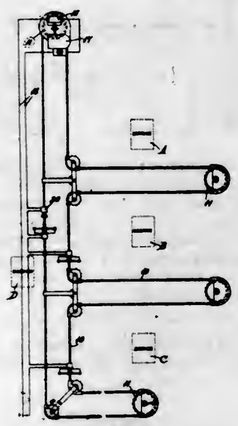
1,350,771. AUXILIARY RADIUS-TRUSS FOR AUTOMOBILES. GEORGE G. BAYNE, Bushnell, Ill. Filed Dec. 24, 1917. Serial No. 208,631. 5 Claims. (Cl. 267—66.)

1. In an automobile, a pair of truss-rods arranged to form a truss having a rearwardly projected apex, one of them having an elongated slot near its rear end, and a button secured to and projecting from the other rod and having an oblong head adapted when in one position to pass through said slot and when in another position to lie across and extend beyond its side walls, means for connecting the front ends of said rods to the front axle of the automobile, and means for supporting their rear ends.



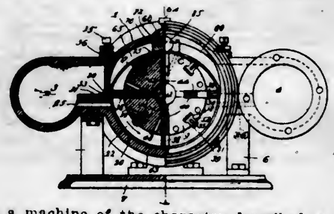
1,350,772. CENTERING MEANS AND METHOD OF FORMING MONOLITHIC ARCHES. WILLIAM M. FELT and HERSCHEL C. SMITH, Bloomington, Ill., assignors, by mesne assignments, to American Concrete Forms Company, Bloomington, Ill., a Corporation of Illinois. Filed Feb. 21, 1917. Serial No. 149,993. 6 Claims. (Cl. 25—131.5.)

4. In monolithic concrete arch construction in combination a plurality of arch rib centerings each comprising a series of connected mold sections having means to form a mold for the rib only, said connected mold sections having means for adjusting the rise and span of the rib centerings



respectively and removable temporary supports resting at either end upon the adjacent sides of the rib centerings whereby to form a mold for the bottom of the barrel of the arch.

1,350,773. VISE-HANDLE. JOSEPH H. BENTLEY, Bridgeport, Conn. Filed Mar. 10, 1919. Serial No. 284,582. 3 Claims. (Cl. 74—33.)

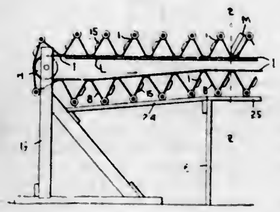


1. As a new article of manufacture an attachable handle formed of one piece, including a handle and hub portion, the latter having two intersecting elongated sockets formed at right angles to each other and centered on the same radial plane and on a radial plane with the handle, the said handle being disposed from the hub intermediate of the two open end portions of the sockets and out of alinement with the sockets.

1,350,774. CHAIN CONVEYER. CHARLES L. BRALEY and CHARLES E. WAREAM, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed June 22, 1917. Serial No. 176,358. Renewed Jan. 22, 1920. Serial No. 353,385. 3 Claims. (Cl. 193—2.)

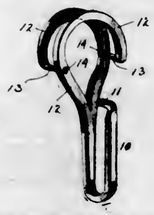
1. In combination, an endless conveyer adapted to travel past a series of working stations and provided with a plurality of article carrying supports, driving means therefor, and means at each of said stations constructed and arranged to be actuated by articles on said supports and adapted when actuated to stop the movement of said conveyer.

1,350,775. ROTARY PUMP. AUGUST BRAUER, Independence, Mo., assignor of one-half to G. P. A. Weisenborn, Kansas City, Mo.; Charlotta Brauer executrix of said August Brauer, deceased. Filed Aug. 5, 1918. Serial No. 248,322. 3 Claims. (Cl. 103—44.)



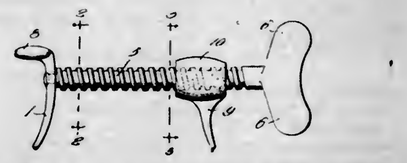
1. In a machine of the character described, a cylinder having inlet and outlet ducts, a journaled shaft extending through said cylinder, a rotor mounted upon said shaft, channels between said rotor and the interior of the cylinder and communicating with the inlet and outlet ducts, a bushing in the cylinder arranged eccentrically to the rotor and having inlet and outlet ports communicating with said channels, a companion bushing in the cylinder spaced from and arranged concentrically to the rotor, vanes slidable in the rotor and adapted to engage the inner surfaces of said bushings, and means extending through the cylinder to prevent the bushings from rotating.

1,350,776. BATHING-HAT. JOSEPH T. BROGDEN, Providence, R. I., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Sept. 16, 1919. Serial No. 324,187. 7 Claims. (Cl. 2—106.)



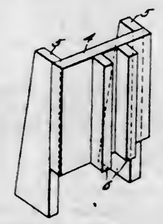
1. In a bathing hat, a frameless and seamless collapsible water-tight hat body of a size larger than the head of the wearer and at its open end closely fitting the head, and a flexible interior openwork body connected to the first one and adapted to conform to the head whereby the hat body is prevented from slipping down on the head.

1,350,777. CONVEYER FOR BAGS. BENJAMIN F. BROWN, Fitchburg, Mass., assignor to Brown Bag Filling Machine Co., Fitchburg, Mass., a Corporation of Massachusetts. Original application filed Sept. 3, 1912. Serial No. 718,270. Divided and this application filed July 27, 1917. Serial No. 183,123. 6 Claims. (Cl. 193—2.)



1. In an apparatus of the class described, an endless traveling conveyer having rotatable drums at the ends of the runs thereof, a series of regularly spaced bag supports pivotally connected with the conveyer, projecting therefrom at an oblique angle and provided with braces to maintain them in said angular position relatively to the conveyer when on the upper and lower runs thereof, bearing rolls connected with each support, and a fixed track beneath the conveyer and along which the rolls travel when the bag supports are on the lower run to sustain the same.

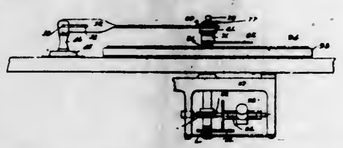
1,350,778. HARNESS-HOOK. TOM BURGESS, Corinth, Miss. Filed June 3, 1920. Serial No. 386,173. 1 Claim. (Cl. 21—79.)



A device of the kind described comprising in a single piece a hook and an eye, the eye consisting of similar oppositely curved branches with a terminal stud opposite which is a hole, each branch being less than a circle and the stud of one branch being receivable in the hole opposite it in the other branch and the member from which the branches extend being a single piece that terminates in the hook and the two branches being bendable one toward the other to cause the stud at one branch to enter the hole in the opposite branch.

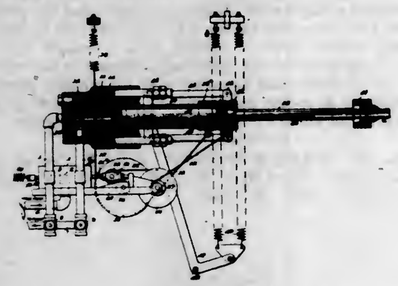
1,350,779. TIRE-CASING SPREADER. THOMAS CARDINELL, Mound City, Mo. Filed Oct. 22, 1919. Serial No. 332,405. 2 Claims. (Cl. 152—27.)

1. A spreader for tire casings, comprising a screw one end having turning means the other end being reduced to provide a shouldered extension, a traversing nut mounted on the screw and having a horn or integral casing engaging member with a concave face, a second horn or casing engaging member rotatively attached to the reduced end of the screw and provided with an integral grasping member or knob-like handle which extends laterally and is positioned above the longitudinal axis of the screw.



1,350,780. BOLSTER-STIRRUP. JOHN P. CARTER, Carter, Mont. Filed Sept. 6, 1918. Serial No. 252,930. 1 Claim. (Cl. 280—148.)

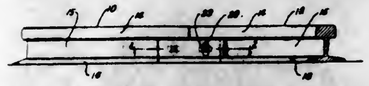
In combination with a wagon bolster having the usual upright standards, and a false bolster on the main bolster,



the ends of which fall short of said standards; plates positioned between the ends of the false bolster and said standards and equipped with cleats which embrace the latter, and a pair of side members carried by each plate and encompassing both of said bolsters, substantially as described.

1,350,781. STOP MECHANISM FOR TALKING-MACHINES. PLINY CATUCCI and ANTHONY VASSELLI, Newark, N. J., assignors, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Original application filed Apr. 8, 1915, Serial No. 20,050. Patent No. 1,277,545. Divided and this application filed Aug. 3, 1918. Serial No. 248,203. 4 Claims. (Cl. 74—46.)

3. A stop mechanism for talking machines, having a mandrel, a motor for rotating the same, a pivoted arm, a tubular shaft carried by the free end of the arm, said shaft adapted to engage the mandrel and rotate therewith, a thimble carried by the tubular shaft, a cross arm carried by the thimble, a spring interposed between the cross arm and the thimble, an index arm carried by the cross arm, a spindle movable longitudinally of the tubular shaft and rotatable therewith, a stop carried by the pivoted arm, a pin on the spindle, said pin engaging a spiral slot in the tubular shaft, a finger on the spindle, adapted to engage the stop whereby when the rotation of the index arm is arrested the tubular shaft and spindle will rotate relatively to each other, the spindle will by the engagement of the pin with the spiral slot move longitudinally of the tubular shaft, the finger will engage the stop on the pivoted arm, and the rotation of the tubular shaft, mandrel and motor will be arrested.



1,350,782. FLUID-REGULATOR. PLINY CATUCCI and LOUIS D. NADEL, Newark, N. J., assignors, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Original application filed Nov. 20, 1918, Serial No. 263,301. Divided in part and this application filed Nov. 20, 1918. Serial No. 263,302. 9 Claims. (Cl. 138—10.)

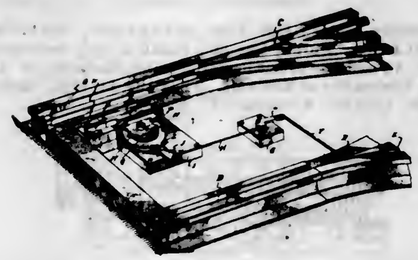
1. A fluid operated device having elements constructed and arranged to be moved at different rates of speed, and means operated by the elements for regulating the movement of the elements.

1,350,783. RAILROAD-JOINT. HARRY CHOMYN, Fox Valley, Saskatchewan, Canada. Filed July 2, 1919. Serial No. 308,289. 3 Claims. (Cl. 238—237.)

2. In a rail joint connection the combination with a pair of running rails having offset stems, flanged bases extending therebelow on the offset sides, said stems containing longitudinal slots, of projections extending outward from said stems adapted to pass through the slots in mating stems, and buttons pivotally secured on said

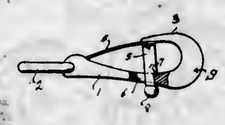
projections, said buttons passing through the mentioned slots when in a horizontal position, and engageable with the exterior of the mating stems when in a vertical position whereby said rails are firmly bound upon opposite sides.

1,350,784. SOAP-CAKE RETAINER. TEMPLE HERBERT COLBURN, Minneapolis, Minn. Filed July 21, 1919. Serial No. 312,162. 10 Claims. (Cl. 45—28.)



4. A soap-cake retainer comprising an anchor shank having a body with a relatively coarse screw-thread, one end of said shank having a relatively fine screw-thread, the body of said shank adapted to be screwed completely into a soap-cake to project its screw-threaded end therethrough, a cap adapted to be locked onto the projecting screw-threaded end of the shank, and a flexible connection for the cap.

1,350,785. CLASP. AMI CORNU, La Chaux-de-Fonds, Switzerland. Filed Mar. 5, 1920. Serial No. 363,488. 4 Claims. (Cl. 24—218.)



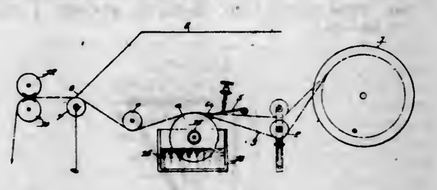
1. In a clasp, a member having a stud projecting therefrom, a socket member comprising a body portion having substantially parallel ribs forming a receptacle, a spring member in said receptacle, and a plate fixed in the said receptacle and having an opening therein with a portion thereof spanned by the said spring, there being an opening in the said body portion registering with the opening in the plate through which the said stud is adapted to pass and to be engaged by the spring to maintain the parts in an assembled relationship.

1,350,786. SWITCH-OPERATING MECHANISM. HENRY M. COREY, Flint, Mich. Filed Nov. 13, 1919. Serial No. 337,779. 5 Claims. (Cl. 346—328.)

5. The combination, with a main track, of a fixed and a pivoted tongue member whereby a siding track is placed in connection therewith, a bifurcated lever member operatively connected with said pivoted tongue member, and a rotatable gear wheel located between the branching portions of said lever member in position to be tripped by a car passing along said track, adapted to sharply engage one or the other of said bifurcated portions of said lever members, thereby actuating through it said pivoted tongue member.

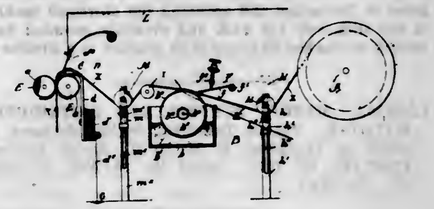
1,350,787. SNAP-HOOK. DAVID J. DARKES, Fredericksburg, Pa. Filed Apr. 10, 1920. Serial No. 372,872. 1 Claim. (Cl. 24—241.)

The combination with a snap hook including a shank, a bill and a spring tongue secured to the shank and normally engaging the free end portion of the bill; a laterally disposed arm carried by the free end portion of the spring tongue, said arm being flat and having its side faces disposed in a direction longitudinally of the spring tongue, said arm being reduced in width to provide a shoulder in its outer longitudinal marginal portion inwardly of the outer end of said arm, the shank of the snap hook being provided with a slot through which the arm extends, said slot extending longitudinally of the shank, the shoulder of the arm of the spring tongue contacting with the inner face of the shank adjacent the outer end of the slot to normally hold the spring tongue against inward movement, said slot being of a length in excess of the width of the arm to permit inward movement of the arm to free the shoulder from the shank and to permit said arm to have free endwise movement through the slot.



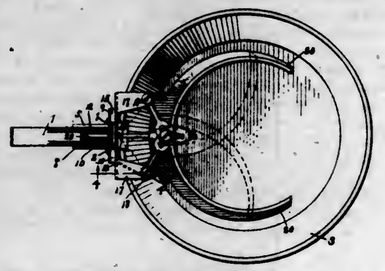
1,350,788. APPARATUS FOR CONTINUOUSLY SEPARATING JUICES FROM MATERIALS. GEORGE H. DAY, Cuba, Ill. Filed June 29, 1918. Serial No. 242,519. 7 Claims. (Cl. 100—35.)

1. An apparatus of the class described, including in its construction an endless belt-like carrier of fabric, a pair of spaced horizontally disposed rollers over which the carrier is trained, a pair of vertically disposed rollers stationed between the horizontal ones and toward and between which the carrier folded upon itself is adapted to travel, and spaced pairs of members disposed between the horizontal and said vertical rollers, the members of each pair being inclined at an angle to one another in opposite directions, and supporting the carrier, the angle of inclination of said members more nearly approaching a vertical position as their positions are closer to said vertical rollers.



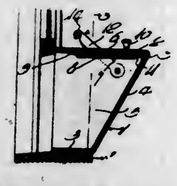
6. An apparatus of the class described including in its construction an endless fabric belt-like carrier, a pair of spaced horizontal rollers over which the carrier is trained, a material reducing cylinder arranged to discharge materials upon said carrier, means to drive the carrier including pressure rollers, and a member provided with a roughened surface disposed in the path of the carrier against which surface the carrier is adapted to bear in its travel.

1,350,789. APPARATUS FOR TREATING TELEGRAPH-TAPE. PATRICK B. DELANY, South Orange, N. J., and LOUIS W. SHUMAKER, New York, N. Y., assignors to Telepost Company, New York, N. Y., a Corporation of Maine. Filed Nov. 30, 1917. Serial No. 204,680. 4 Claims. (Cl. 91—51.)



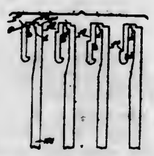
1. In an apparatus for treating telegraph tape, means for advancing the tape, a container of chemical solution, a wheel whose periphery is immersed in the solution and which is formed with a groove, and a wick in said groove, said tape passing in contact with the wick and the wick being narrower than the tape.

1,350,790. TELEGRAPHY. PATRICK B. DELANY, South Orange, N. J., and LOUIS W. SHUMAKER, New York, N. Y., assignors to Telepost Company, New York, N. Y., a Corporation of Maine. Filed June 12, 1918. Serial No. 239,575. 18 Claims. (Cl. 178—62.)



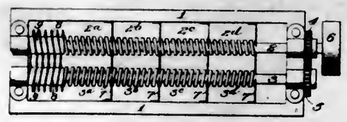
1. In chemical telegraphy means for advancing an absorbent record tape, means for applying a chemical solution to the middle portion only of the under side of the tape while being advanced, a ground contact over which the treated tape passes, and a contact connected to line which bears on the upper side of the tape and through which an electric current passes to the tape and thence to ground whereby metal is transmitted from said contact to the tape to produce telegraphic characters thereon.

1,350,791. MOP-WRINGER. WILLIAM DEQUEDE, New Orleans, La. Filed June 12, 1920. Serial No. 388,614. 5 Claims. (Cl. 15—12.)



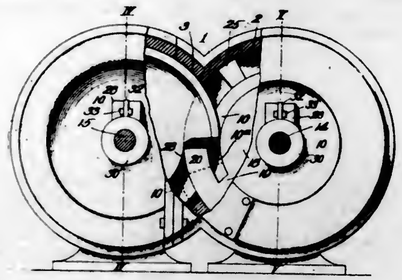
1. The combination of a bracket, two vertical pivots carried thereby, curved arms mounted thereon at different levels so that they may be swung across between each other, means to support the bracket on a pail, and means to swing the arms toward each other.

1,350,792. WINDOW-VENTILATOR. JOHN DIXON, Gary, Ind. Filed May 3, 1920. Serial No. 378,486. 1 Claim. (Cl. 98—31.)



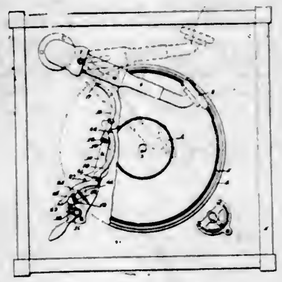
A window ventilator comprising an elongated open-sided box composed of a single sheet of metal bent to form a relatively wide top wall, an outwardly and downwardly inclined side wall and a relatively narrow bottom wall, the latter being disposed in parallelism with the top wall, the opposite ends of said sheet being bent laterally and inwardly toward each other to form continuous hooks; end walls for said box made of metal plates, each having three of its edges bent to form like hooks for engagement with the first named hooks, said top wall being provided with a plurality of outlet openings to communicate with the interior of the place to be ventilated, ledges secured to the underside of the top wall adjacent to and on opposite sides of the outlet openings, a slide movable in said ledges, being provided with openings to register with the outlet openings, a screen secured to the under faces of the ledges and spanning the aforesaid openings in the slide and top wall, and pivotally mounted hooks carried by the box to retain it in position in a window.

1,350,793. MATRIX SETTING AND DISTRIBUTING MACHINE. JULIUS DORNETH, Berlin, Germany, assignor to Typograph G. M. B. H., Berlin, Germany. Filed Jan. 12, 1917. Serial No. 141,937. 5 Claims. (Cl. 199—64.)



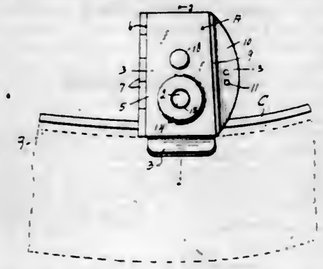
1. A linotype matrix having a suspension hook, said suspension hook having a central running part, and kerns adjacent said running part, on each side thereof, within the hook, for acting in conjunction with means on the linotype machine for effecting a distribution into groups of the matrices.

1,350,794. MACHINE FOR SEPARATING BUTTON-BLANKS. PHILIP EBY and LLOYD ANGLE, Rochester, N. Y., assignor to Art in Buttons, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 14, 1916. Serial No. 114,706. 6 Claims. (Cl. 83—92.)



1. A button blank sorting machine comprising a pair of substantially parallel members spaced from each other and having opposed deep and narrow grooves, the edges of which form gage points for simultaneously defining the diameter and the thickness of a button blank.

1,350,795. ROTARY MOTOR. LANDY D. EPPERSON, Mount Washington, Mo. Filed Apr. 21, 1919. Serial No. 291,481. 1 Claim. (Cl. 121—71.)

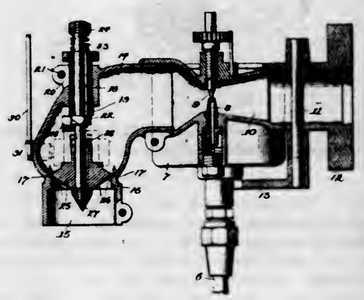


A rotary motor comprising a casing consisting of two members secured faceways together and conjointly forming intersecting circular piston and abutment chambers, the sides of the casing where respectively inclosed by said chambers being spaced slightly apart, shafts extending through and journaled in the casing axially of said circular chambers respectively and intergeared together, a piston rigid upon the shaft extending axially of the piston chamber, and comprising a circular disk fitting in the space between the adjacent sides of the casing and of less radius than the inner side of the piston chamber, an arm extending outward from said disk and a segmental piston rigid with said arm and engaging said piston chamber and of corresponding width therewith, a shaft parallel with the first-named shaft, extending through and journaled in the casing axially of the abutment chamber thereof, and a circular abutment mounted on said shaft and comprising a central portion fitting in the narrow space between adjacent portions of the sides of the casing, and a peripheral portion fitting in the abutment chamber, said abutment and its central portion having a cut away portion constituting a recess for receiving said piston; the sides of the casing between said shafts being provided with internal segmental recesses for snugly receiving the abutment and with opposite segmental recesses for receiving the piston when the same is in engagement with the peripheral recess of the abutment, and said casing at its abutment side also having an intake port and an exhaust port to be automatically closed and opened by the passage of the piston thereby.

1,350,796. AUTOMATIC STOP. PINCUS FARB, Saginaw, Mich., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed May 31, 1918. Serial No. 237,464. 7 Claims. (Cl. 74—46.)

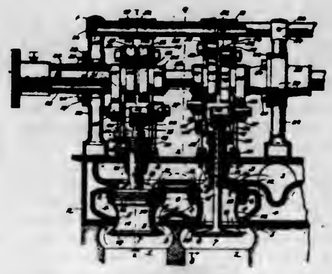
7. A device of the character described, comprising a stationary member, a pivoted bell crank lever, a spring for moving the bell crank in one direction, a brake shoe carried by the bell crank and adapted to engage a moving part, a lug carried by the bell crank, a dog adapted to engage the lug to lock the bell crank against the tension of the spring, a lever carrying the dog, a spring attached to the lever, a pivoted arm, said arm engaging a pin carried by the lever, whereby movement of the arm in one direction will move the lever to release the brake, a stationary pin, there being a slot in the arm engaging the pin, whereby the movement of the arm will be limited, a pin on the arm, a pivoted tone-arm, a movable finger carried by the tone-arm, said finger being adapted to engage the pin on the arm to rock the latter, whereby the lever will be rocked and the brake released, and means for manually rocking the lever.

1,350,797. GUARD. CHARLES M. FOOTE, Nashua, N. H. Filed Mar. 20, 1920. Serial No. 367,314. 4 Claims. (Cl. 224—29.)



1. In combination with a bracket provided with an outstanding shank, a member through which said shank is disposed and a clamping nut engaged with the shank, a guard comprising two hingedly connected sections adapted to substantially snugly embrace the bracket and adjacent portion of the member, a wall of the guard being provided with an outstanding housing to receive the clamping nut, means for locking the sections against separating movement when applied, and additional means for securing the guard to the bracket and the member.

1,350,798. PROCESS FOR VULCANIZING RUBBER AND SIMILAR MATERIALS. WILLIS A. GIBBONS, Flushing, N. Y., assignor to American Rubber Company, a Corporation of Massachusetts. Filed Dec. 11, 1916. Serial No. 136,388. 12 Claims. (Cl. 18—53.)

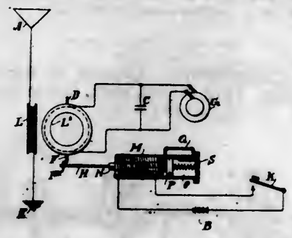


1. A process of the kind described, which comprises applying an inert gas as a vulcanizing medium to a vulcanizable plastic material in a chamber communicating with the atmosphere, and vulcanizing the plastic material by said inert gas while preventing the passage of air into the chamber by a counter-passage of gas.

1,350,799. CARBURETER. CHARLES R. GREUTER, Cincinnati, Ohio. Filed Feb. 23, 1917. Serial No. 150,415. 7 Claims. (Cl. 251—145.)

3. A suction-actuated valve for controlling the admission of air to a carbureter, said valve comprising a shell or casing having an admission port widening gradually in the direction of the flow of air through it; a weighted valve having a flaring or conical outer face dimensioned substantially to fill at its periphery the most contracted portion of said admission port; and a guide and limit stops for directing said valve in a limited vertical movement inward and upward from said contracted portion of the air port.

1,350,800. ENGINE-VALVE MECHANISM. CHARLES R. GREUTER, Detroit, Mich. Filed Aug. 22, 1918. Serial No. 250,995. 14 Claims. (Cl. 123—75.)

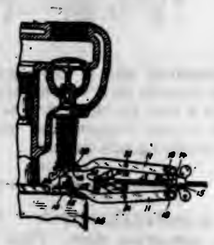


1. In combination with a valve seat, two concentric valves, one of annular form to close against said seat and provided with a seat for the second valve, and the other of disk form to seat thereon; and means for positively seating and unseating said valves.

1,350,801. RADIOTELEGRAPHY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed May 28, 1913. Serial No. 770,315. Renewed Jan. 8, 1920. Serial No. 350,248. 9 Claims. (Cl. 250—19.)

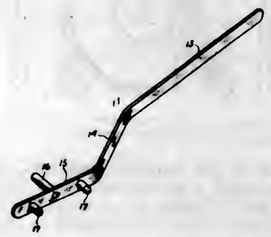
1. In a radio transmission system, a transmitting station comprising a generator of high-frequency electrical oscillations, a movable inductance coil in circuit therewith, an electromagnet, means for energizing said electromag-

net, means controlled by said electromagnet for moving said inductance coil, means for retarding the movement



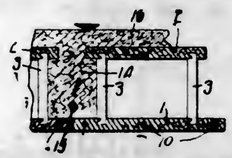
of said coil, and an antenna circuit having a coil in inductive relation to said movable inductance coil.

1,350,802. BAND-CUTTER AND FEEDER. CHAUNCY H. HILL, Hopkins, Minn., assignor of one-half to Minneapolis Threshing Machine Co., Hopkins, Minn., a Corporation. Filed Jan. 21, 1919. Serial No. 272,228. 11 Claims. (Cl. 130—1.)



1. A grain feeding apparatus comprising a casing, band cutters mounted therein, an apron frame, an apron operating therein to deliver the bundles of grain to said band cutters, said apron frame having a section hinged to the inner end thereof forming an extension of the main portion of said frame, and over which extension said apron moves, said hinged portion being free to oscillate vertically and extending beneath and terminating near said band cutters to be depressed out of alinement with the main portion of said frame with the portion of the apron on said extension by the pressure of the bundles engaging the band cutters, and means for yieldingly resisting the depression of said apron frame extension.

1,350,803. COMBINED VALVE-LIFTER AND HAND-VISE. PERCY P. HINCKLEY, Meriden, Conn., assignor to Foster, Merriam & Company, Meriden, Conn., a Corporation of Connecticut. Filed Aug. 29, 1919. Serial No. 320,601. 2 Claims. (Cl. 29—86.3.)



1. A tool of the character described comprising jaws having slots to receive a valve stem, strengthening flanges at their edges and U-shaped shanks, a bridge to which the shanks are pivoted, a threaded plunger which slides freely through the bridge and is provided with a flattened head, toggle levers formed from strips of metal bent at their midlengths, the branches of said levers being pivoted to the flattened head of the plunger and their connected ends being pivoted between the sides of the shanks, and a wing nut on the plunger adapted to bear against the bridge.

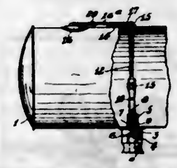
1,350,804. VALVE-GRINDER. PERCY P. HINCKLEY, Meriden, Conn., assignor to Foster, Merriam & Company, a Corporation of Connecticut. Filed Dec. 24, 1919. Serial No. 347,109. 1 Claim. (Cl. 51—4.)

A valve grinder comprising a handle having a downwardly extending offset to which is integrally attached a flat outer portion carrying a plurality of studs, one above said outer flat portion and two below the same, one of each of the lower studs being disposed adjacent opposite ends of said flat outer portion and adapted to engage a valve, and said upper stud adapted to pivotally carry said handle and to have disengageable connection with a member in which it is oscillatable.

1,350,805. BUILDING CONSTRUCTION. RALPH Z. HOPKINS, Detroit, Mich. Original application filed Feb. 26, 1914, Serial No. 821,145. Divided and this application filed May 11, 1917. Serial No. 167,882. 5 Claims. (Cl. 72—66.)

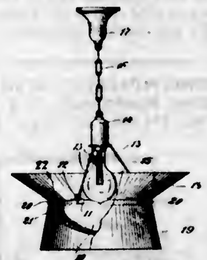
4. A structure including two blocks of molded non-metallic material having a jointed interlocking connection and thin inter-engaging metal facings for the blocks at the joint, said facings being anchored in the corresponding blocks and forming permanent parts thereof, the facing of one block conforming closely to the facing of the other throughout the joint.

1,350,806. BABY-CARRIAGE. HRYHORIJ HUCULAK, Clearing, Ill. Filed Jan. 13, 1920. Serial No. 351,170. 2 Claims. (Cl. 208—36.)



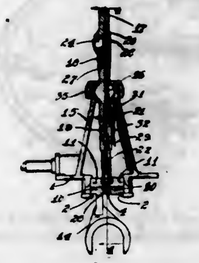
1. A baby carriage, comprising a body, front and rear wheels, the floor of said body having a rearward extension provided with an aperture for the legs of the operator, an operator's seat at the rear of said aperture, reciprocatory foot pedals below said aperture, gear trains operatively connecting said foot pedals with the rear wheels of the carriage, a pair of angular straps fixed to the said extension and having portions extending under the said pedals, and springs resting on said straps and acting to move said pedals upwardly.

1,350,807. DEVICE FOR CLEANSING THE INTERIOR OF BOTTLES AND OTHER RECEPTACLES. EDITH A. JACKSON, Prahran, near Melbourne, Victoria, Australia. Filed Feb. 19, 1919. Serial No. 277,951. 1 Claim. (Cl. 141—7.)



A bottle-cleaning device, comprising a malleable metal ball adapted to be attached to a supporting element and having a diametric split extending from one side thereof to near its center, the walls of said split being closed together; and a tuft of bristles having its intermediate part secured between said closed walls and its ends protruding beyond the ball, whereby the tuft may be removed from the wall and replaced by inserting a sharp-edged instrument into the split and expanding its walls.

1,350,808. FUEL-TANK FOR INTERNAL-COMBUSTION ENGINES. FREDERIK JENSEN, Rochester, N. Y. Filed Dec. 19, 1919. Serial No. 346,068. 3 Claims. (Cl. 158—46.5.)



2. In combination with a fuel tank for internal combustion engines having an outlet; a valve for controlling such outlet comprising a casing member having a lateral port, a valve member mounted to turn in said casing and having two lateral ports, one above the other, the lower port being adapted to be brought into and out of register with the port in the casing member, and a projection within the casing member, operating in the port of the valve member to coöperate with opposite end of the port in order to limit the movement of the valve member in said casing member.

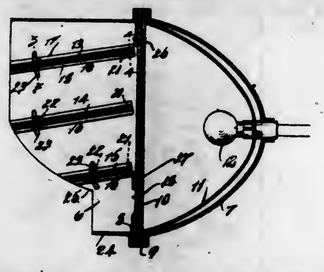
1,350,809. LIGHTING-FIXTURE. WILLIAM E. JEROME, Rockville Center, N. Y. Filed Dec. 19, 1919. Serial No. 345,991. 5 Claims. (Cl. 240—92.)

1. A lighting fixture comprising an upwardly flaring reflector and a downwardly flaring reflector joined at their smaller ends to form a single reflecting body, a translucent bowl and incandescent lamp around which the reflecting body is supported in such manner that the bowl is within the lower reflector and the lamp within the upper reflector.

1,350,810. GEAR-SHIFT-LEVER LOCK. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1917. Serial No. 191,960. 4 Claims. (Cl. 70—128.)

1. In a device of the class described, the combination with a gear shift lever, of an apertured gear shift block support, gear shift blocks movably mounted therein on each side of said aperture, key-operated means within the gear shift lever adapted to be moved downwardly through the lower end of said lever into said aperture and between said gear shift blocks to hold said lever locked from movement, a hook on said lever and on said key operated means, and resilient means attached to said hooks for returning said key operated means to normal position.

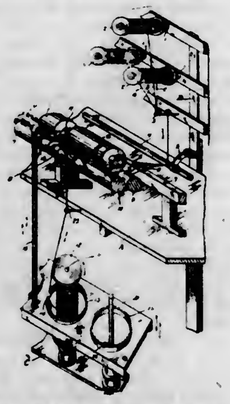
2. In a gear shift lever lock the combination with a gear shift lever having a passage therein, a projection on said lever, key-operated means within said passage, a hooked locking member also in said passage connected with said key-operated means and adapted to be projected through the open lower end of said lever when said key-operated means is actuated, an apertured stationary gear shift block support below said lever to receive said locking member to hold said lever locked against movement, and means connected to said hooked locking member and to said projection for returning said hooked locking member to release position.



3. In a gear shift lever lock the combination with a passaged gear shift block support, of a gear shift lever having a longitudinal passage and slot therein, a key-operated lock on said lever, a latch bar within said passage connected with said lock, a locking bolt in said passage, a hooked member thereon engaging the lower end of said latch bar and projecting outwardly through said slot, said locking bolt adapted to be moved to engage in said passaged block support to hold said lever locked when said latch bar and key lock are operated, a projection on said lever, and resilient means attached thereto and to said hooked member for returning the locking bolt to normal position when said key lock is released.

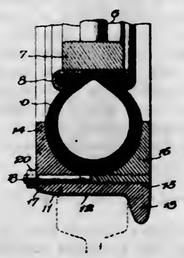
4. In a device of the class described the combination with a gear shift lever having a slot and passages therein, a key lock mounted in said lever, a latch bar in one of said passages connected therewith, a hooked locking bolt in the other of said passages connected with said latch bar, and having the hooked portion thereof projecting through said slot, said locking bolt adapted to be projected into locking position by said latch bar when said key lock is operated, and a spring connected with said lever and said hooked locking bolt for returning said hooked locking bolt to a release position when said key lock is released.

1,350,811. LIGHT-DEFLECTOR FOR LAMPS. JAY D. JONES, New York, N. Y. Filed Nov. 8, 1919. Serial No. 336,714. 3 Claims. (Cl. 240—45.2.)



1. A device of the character described comprising, a hood fitted to be secured to a lamp in front of the lens, said hood being cut away at its lower sides and bottom,

and a plurality of dimming vanes mounted in the hood, one of them being located substantially centrally in the

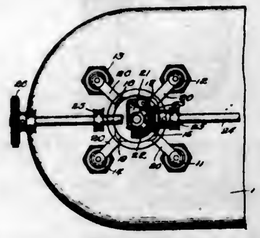


hood and another one near the bottom of the hood, the last named vane being shorter than the central one.

1,350,812. THREAD-TWISTING MACHINE. ALFRED E. JURY, Newark, N. J., assignor to Morgan & Wright, a Corporation of Michigan. Filed July 24, 1918. Serial No. 246,472. 5 Claims. (Cl. 28—34.)

5. In thread twisting machines, feed rolls having a plurality of threads, a twisting spindle for a receiving spool, a ring rail having reciprocatory movement relative to said spindle and rolls, a support for the threads at the point of twist and means for moving said support synchronously with the ring rail.

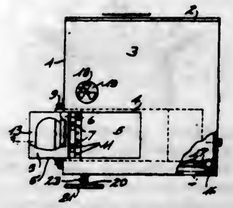
1,350,813. CONVERTIBLE WHEEL. ERNEST LISLE KEESLING, San Jose, Calif. Filed Feb. 28, 1919. Serial No. 279,740. 4 Claims. (Cl. 295—8.5.)



1. A convertible rim comprising a member having a tread portion with oppositely extending flanges, one being adapted to engage the rail and the other curved in cross-section to conform to and engage the side of a tire of a vehicle, and a plurality of separate curved clamping members adapted to engage the other side of the tire at spaced intervals with adjustable securing means whereby the tire may be clamped between said tire engaging flange and clamping members.

1,350,814. PROCESS OF MANUFACTURING LUBRICATING-OILS. HELMUT KLEVER, LUDWIG CARL LAUTENSCHLÄGER, and OSWALD HELMUTH GÖHRING, Karlsruhe, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Feb. 14, 1916. Serial No. 78,311. 11 Claims. (Cl. 87—9.)

1. The process of manufacturing lubricating oils from coal tar oils or distillates of coal tar pitch embodying chiefly bases and phenols, consisting in condensing and polymerizing the components of such substances by heat under pressure, and avoiding losses by evaporation during the heating of the substances.



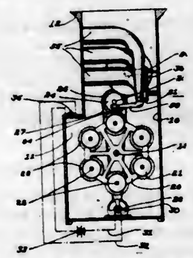
11. As a new article of manufacture, a lubricant consisting of condensed and polymerized bases and phenols and coal tar oils or distillates from coal tar pitch having high viscosity and being soluble in tar oils, benzol, xylol, and mineral oils.

1,350,815. IGNITION MECHANISM FOR INTERNAL-COMBUSTION ENGINES. CHARLES Y. KNIGHT, Pasadena, Calif., assignor to Knight American Patents Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1918. Serial No. 258,526. 10 Claims. (Cl. 123—143.)

6. The combination with a cylinder of an internal combustion engine, of a plurality of ignition plugs connected therewith for igniting the charge in said cylinder, a distributer for successively connecting said plugs with a source of electrical energy, said distributer being arranged to connect but one of said plugs with said source at one time, and mechanism controlled by the engine for operating said distributer in synchronism with the operation of said engine so that when one of said plugs operates to ignite the fuel in said cylinder at the proper time in the cycle of movement of said engine the other plugs connected with said cylinder will remain quiescent.

1,350,816. AUTOMATICALLY-CLOSING RECEPTACLE. CHARLES H. KORS, Poughkeepsie, N. Y. Filed June 13, 1917. Serial No. 174,428. 6 Claims. (Cl. 131—48.)

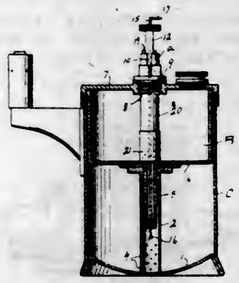
6. In a normally closed receptacle, the combination of a container having an opening in its front face, a closure



adapted to move laterally to cover and uncover said opening, and an outwardly extending guide on said closure adjacent to the forward edge of the closing portion thereof and adapted to be engaged by the hand of the user so as to move said closure to open position and to guide the hand of the user toward said opening and past said forward edge when said closure is so moved, said slide projecting beyond said guide only on the rear side thereof, a flexible connection fastened to said slide and extending across said opening when said slide is in open position, and spring take-up means mounted on said receptacle for winding up said flexible connection and tending to move said slide to closed position.

1,350,817. UTENSIL-COVER HOLDER. CHARLES H. KORS, Philadelphia, Pa. Filed Aug. 14, 1919. Serial No. 317,426. 3 Claims. (Cl. 53—8.)

1. In a device for operatively securing a utensil cover to the handle of the utensil, the combination of a lever having a long arm and an upwardly projecting short arm at approximately a right angle to one another, means at the fulcrum of said lever for securing it to the utensil handle at a point adjacent to the inner end of said handle, and means for connecting the free end of the long arm to the cover, said arms when the cover is in closed position being on the same side of a vertical plane passing through said handle at a point adjacent to its inner end and to said fulcrum.

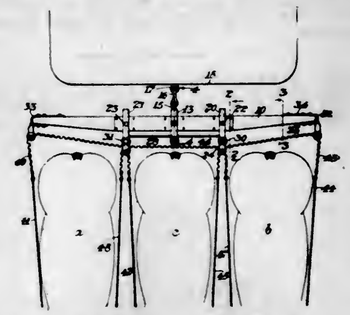


1,350,818. AUTOMATIC ORGAN. CYRILL KRALIČEK, Chicago, Ill. Filed Oct. 22, 1919. Serial No. 332,417. 3 Claims. (Cl. 274—18.)

1. In an orchestrion gramophone, the combination with a casing, a plurality of horns pivotally engaged in said casing, said horns opening outward, sound boxes pivotally engaged at the lower ends of said horns, a cylindrical record on which each of said sound boxes is adapted to rest, each of said records carrying the sound from a separate instrument of music, means for rotating said records and means for actuating said sound boxes, coincidentally therewith.

1,350,819. ACETYLENE-GAS LAMP. MARK LEONHARDY, Buena Vista, Colo. Filed Apr. 23, 1919. Serial No. 292,111. 1 Claim. (Cl. 48—4.)

A lamp of the class described comprising a carbid chamber, a reservoir imposed upon the chamber and provided with a discharge nozzle extending within the chamber, a sleeve extending through the reservoir and secured to the top thereof, said sleeve extending to the bottom of the reservoir and in communication with the discharge nozzle, the end portion of the sleeve adjacent the bottom of the reservoir being provided therearound with openings, a stem slidably disposed through the top of the reservoir and the sleeve within the reservoir, and a valve carried by the inner end portion of the stem for closing the flow

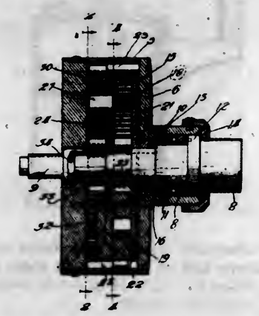


through the discharge nozzle, said valve snugly fitting within the sleeve and of a length to close the openings of the sleeve when the valve is in closed position with respect to the discharge nozzle.

1,350,820. ALKYL ETHER OF STARCHES AND SIMILAR CARBOHYDRATES AND METHOD OF PRODUCING THE SAME. LEON LILIENFELD, Vienna, Austria, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Feb. 16, 1914. Serial No. 818,974. 39 Claims. (Cl. 23—24.)

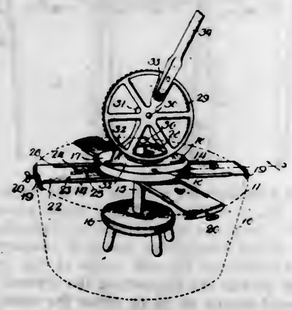
1. The process of producing an ether of a starch, which comprises reacting upon a starch with an ester of an inorganic acid and an alkyl group containing a plurality of carbon atoms, in the presence of a basic substance.

23. As new products, ethyl ethers of a starch in solid form.



1,350,821. DRAFT-EQUALIZER. FRANK A. LYON, Milford, N. Y. Filed Oct. 22, 1919. Serial No. 332,482. 2 Claims. (Cl. 21—76.)

1. A draft equalizer for a three animal team, comprising a cross bar, a central U-shaped strap pivotally connected to the cross bar approximately centrally thereof, auxiliary U-shaped straps also pivotally connected to the cross bar in positions at both sides of the central U-shaped strap, means for connecting the central and auxiliary U-shaped straps so as to cause the same to move in unison relatively to each other and to the cross bar, a roller mounted between the parts of each of the auxiliary U-shaped straps, a bracket secured to each of the auxiliary U-shaped straps, a roller mounted between each bracket and the adjacent part of the corresponding U-shaped strap, a chain passing over a chain slide at one end of the cross bar and over the roller between the parts of the adjacent U-shaped strap, a chain passing over a chain slide at the other end of the cross bar and also over



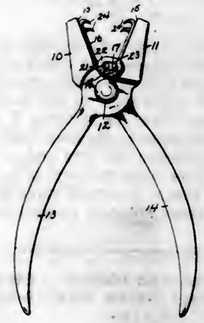
the roller between the parts of the other U-shaped strap, and a chain passing over the rollers between the said brackets and the adjacent parts of the U-shaped strap.

1,350,822. CHANGE-SPEED GEAR. ARCHIBALD MCNITT, Benton Harbor, Mich. Filed Oct. 23, 1919. Serial No. 332,600. 2 Claims. (Cl. 74—34.)

1. In a change speed device, the combination of a cylindrical chamber, a stationary annular gear on the inner cylindrical surface of the same, a closure for the back end of said casing, a removable closure for the front end of the casing, a bearing in the back closure, a slow speed shaft journaled in said bearing and projecting forwardly through the cylindrical portion of the casing, a disk secured to said shaft adjacent to the back closure, a plurality of pinions journaled on the front face of said disk and respectively engaging the annular gear on the casing, a disk journaled on the forwardly projecting portion of the slow speed shaft, a pinion connected to the back face of said disk and meshing with all of the pinions on the first mentioned disk, a plurality of pinions journaled on the front face of the second mentioned disk, all of said pinions meshing with the annular gear of the casing, a high speed shaft journaled in the removable head of the casing, the inner ends of the high and low speed shafts being journaled together, and a pinion on said high speed shaft meshing simultaneously with all of the pinions of the second mentioned plurality of pinions, substantially as described.

1,350,823. WASHING-MACHINE. LAWRENCE MAPLES, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,077. 4 Claims. (Cl. 259—134.)

1. An improved support for an agitating device to convert a tub or like vessel into a washing machine, comprising a frame having intersecting flexible arms adapted to engage over the rim of the vessel and to be confined thereon, and an axially disposed rigidifying element fitted over the intersection of said arms and attached to said arms for supporting an agitator shaft and the mechanism for actuating it.



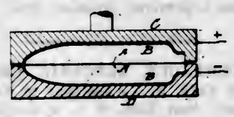
1,350,824. PROCESS FOR VULCANIZING RUBBER. ERWIN E. A. G. MEYER, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Apr. 29, 1916. Serial No. 94,387. 5 Claims. (Cl. 18—53.)

1. In the process of vulcanization, the addition of a small quantity of a concentrated solution of a caustic alkali.

1,350,825. PROCESS OF MANUFACTURING DENSE WARE FROM BAUXITE. ALBERT F. MEYERHOFER, Mannheim, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Oct. 11, 1916. Serial No. 125,116. 7 Claims. (Cl. 18—47.5.)

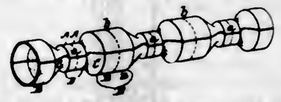
1. The process of manufacturing dense, non-porous refractory bauxite wares, which comprises burning the bauxite, finely grinding the product, mixing therewith water to form a plastic mass, forming and burning the same.

1,350,826. BELT-STAPLING DEVICE. ALEXANDER MICHAL, West Orange, N. J. Filed Mar. 26, 1920. Serial No. 368,837. 1 Claim. (Cl. 1—50.)



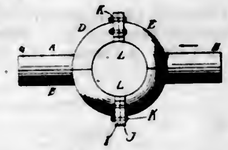
A belt stapling device comprising a pair of pivoted jaws, handles to operate said jaws, said jaws having curved recesses where they converge to receive the closed ends of the staples, lugs connected to said jaws and having slots concentric with the pivot of said jaws, and a strand supported in said slots and extending within said staples to position the same.

1,350,827. SHEET-METAL VEHICLE-WHEEL. THOMAS E. MURRAY, New York, N. Y. Filed June 15, 1918. Serial No. 240,117. 2 Claims. (Cl. 301—66.)



1. An integral sheet metal wheel felly formed of two struck up circular trough-shaped half sections placed with their edges in registry and electrically welded together at said edges to form an endless tube, each of said half sections being formed of a plurality of arc-shaped units electrically welded together at their ends.

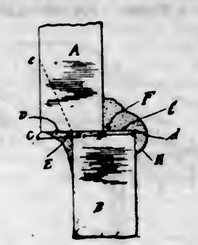
1,350,828. HOLLOW PROJECTILE-SHELL OF SHEET METAL. THOMAS E. MURRAY, Jr., and JOSEPH B. MURRAY, Brooklyn, N. Y. Filed July 15, 1918. Serial No. 244,935. 1 Claim. (Cl. 219—10.)



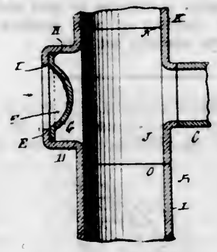
As a new article of manufacture and sale, an elongated hollow projectile shell of sheet metal formed integrally of two interchangeable longitudinally divided sections electrically united at their registering edges.

1,350,829. METHOD OF MAKING A PLURALITY OF LIKE TUBULAR OBJECTS. THOMAS E. MURRAY, New York, N. Y. Filed Jan. 15, 1919. Serial No. 271,326. 1 Claim. (Cl. 29—148.)

The method of making a plurality of like tubular objects, each having at one end a cylinder and at the opposite end a cylinder of greater diameter than said first-named cylinder and a tapered portion uniting said cylinders, which consists in producing from sheet metal a half longitudinal section of a structurally integral series of said objects having like semi-cylindrical ends united, electrically welding two of said half sections together at their registering edges, and transversely dividing said united semi-cylindrical ends to separate the units of said series.



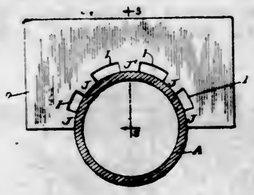
1,350,830. METHOD OF MAKING HOUSINGS FOR AUTOMOBILE TRANSMISSION-GEAR. THOMAS E. MURRAY, Jr., and JOSEPH B. MURRAY, Brooklyn, N. Y. Filed Oct. 8, 1919. Serial No. 329,353. 2 Claims. (Cl. 29—153.)



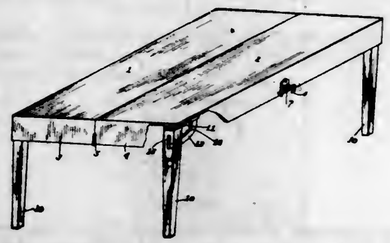
1. The method of making a housing of the type set forth, which consists in first forming of sheet metal two interchangeable longitudinal half sections of said housing of substantially the shape set forth; second, placing the edges of said sections in registry and electrically welding them together; third, transversely dividing said welded object at the middle of the enlarged portion thereof; fourth, bending outwardly the edges of said divided parts to form flanges, and fifth, placing said flanges in registry and uniting the same.

1,350,831. METHOD OF ELECTRIC WELDING. THOMAS E. MURRAY, Jr., and JOSEPH B. MURRAY, Brooklyn, N. Y. Filed Nov. 25, 1919. Serial No. 340,609. 1 Claim. (Cl. 29—148.)

The method of electrically welding thin metal parts in edge contact and disposed so that the contacting surface of one part overlaps the contacting surface of the other part, which consists in establishing the welding current through the joint to unite said parts and to produce an outflow of extruded metal to fill the angles due to said overlapping, and then removing the metal so extruded on one side of said parts, and beveling the portion of said part protruding beyond the opposite part; whereby the thickness of metal measured transversely across the joint is rendered equal to the normal thickness of said parts.

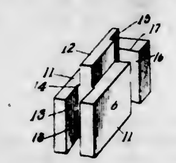


1,350,832. CLOSURE FOR OPENINGS IN BOILER-HEADERS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Dec. 16, 1919. Serial No. 345,171. 2 Claims. (Cl. 220—24.)



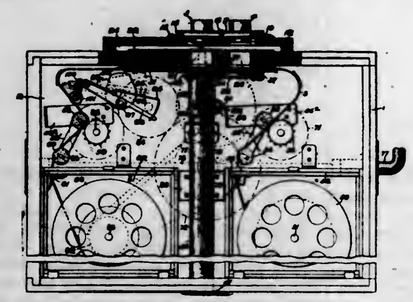
2. A tubular header for steam boilers having a lateral tubular projection with an inwardly turned flange on its outer edge, and a closure plate within said projection, the said plate having a concavo-convex central portion and an encircling flat rim, the said rim being electrically sealed to the inner surface of said flange.

1,350,833. PROCESS OF ELECTRICALLY WELDING TRANSVERSE PLATES TO TUBES. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Dec. 16, 1919. Serial No. 345,173. 1 Claim. (Cl. 219—10.)



The method of electrically welding a metal plate transversely upon the circumferential periphery of a tube, which consists in, first, forming in an edge of said plate an arc-shaped recess of greater curvature radius than said tube having radial projections which make contact with said tube when said plate is applied thereto; second, placing said plate transversely upon said tube and establishing the welding current while pressing said plate against said tube until the projection having its radial direction most nearly approximating the direction of pressure becomes fused.

1,350,834. COMBINATION TRUNK AND TABLE. JAN NIERODKA, Detroit, Mich. Filed Oct. 29, 1919. Serial No. 334,234. 1 Claim. (Cl. 45—116.)

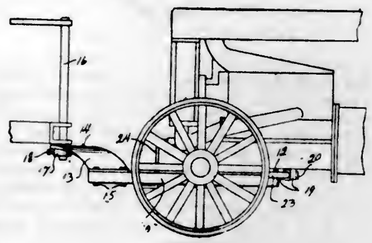


A supporting member for the slotted and hinged legs of bi-partite chests and tables comprising a quadrantal arm having two V-shaped notches and projecting through a transversal slot in the leg, curved concentrically to the axis of the leg hinges, a flat spring secured to one end of each leg, a bowed portion in said spring adapted to yieldingly engage in either of the V-shaped notches of said arm, said notches being so positioned that one is engaged by said spring when the legs are in operative position and the other is engaged by said spring when the legs are in their position of rest, substantially as described and for the purpose set forth.

1,350,835. INTERLOCKING-BLOCK WALL CONSTRUCTION. SAM PISCIOTTA, Kansas City, Mo. Filed Mar. 3, 1919. Serial No. 280,390. 3 Claims. (Cl. 72—38.)

1. A corner block for a wall, having a groove in one end and a groove in one side near the opposite end, and also having a central longitudinal groove in the lower face and an upwardly-projecting longitudinal rib at the upper side, said rib having a vertical recess registering with the said side groove.

1,350,836. METHOD OF AND APPARATUS FOR PRODUCING STEREOSCOPIC MOTION-PICTURE FILMS. HIPPOLYTE M. PRUD'HOMME, Boston, Mass., assignor to Lawrence F. Sherman, trustee, Boston, Mass. Filed May 7, 1917. Serial No. 167,058. 8 Claims. (Cl. 88—16.6.)

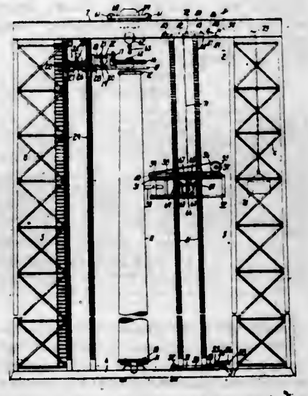


1. The method of producing stereoscopic motion pictures which consists in producing in rapid succession plural motion exposures of the same object side by side upon the same film, the exposures being effected in the same horizontal plane and from different angles, and successively shifting the position of the film relative to the line of exposure to superimpose the exposure from one angle upon a previous exposure from another angle.

1,350,837. PORTABLE ELECTRIC LIGHT. FRANK RAMPP, New York, N. Y., assignor to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 25, 1918. Serial No. 213,632. 11 Claims. (Cl. 240—8.5.)

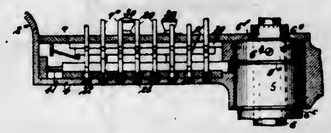
1. A portable electric light comprising a battery-containing and lamp-carrying casing, and means for controlling the circuit of the battery through the lamp including a circuit-controlling slide mounted on the casing for sliding circuit-controlling movement and provided with a clip forming a hook projecting alongside of the slide and adapted to receive between itself and the slide a part of the apparel of the person carrying the light for thereby supporting the light, and in which the hook-forming clip is of less length than the slide and has a free rounded end disposed in proximity to the slide and beyond which the slide projects.

1,350,838. PUSHER ATTACHMENT FOR TRACTORS. PAUL A. RECORDS, Perryton, Tex. Filed June 21, 1920. Serial No. 390,450. 4 Claims. (Cl. 213—67.)



1. A pusher attachment for tractors embodying the usual front axle and body frame, comprising a pair of side members, a member connecting the rear ends of said side members embodying an upstanding foot provided with an opening, a lug extending downwardly from the tractor body and provided with an opening adapted to coact with the opening of said foot to receive an attaching means, U bolts carried by said arms and adapted to engage the front axle of the tractor, and a bridge member connecting the forward ends of said side members and provided centrally of the forward end thereof with an opening.

1,350,839. NON-SLIPPABLE SOLE. ARTHUR EDGCUMBE RENDLE, Philadelphia, Pa. Filed June 5, 1917, Serial No. 173,059. Renewed June 15, 1920. Serial No. 389,186. 3 Claims. (Cl. 36—59.)



1. A non-slippable sole for a boot or shoe comprising an inner base strip overlying the shoe sole portion, an outer or wearing sole portion entirely overlying and secured to said inner base strip along the edges thereof, and a section of abrasive material set flush within said outer sole portion and of the same thickness thereof, substantially as set forth.

1,350,840. SPAR AND BOOM TURNING MACHINE. ARTHUR I. ROBBINS, Quincy, Mass. Filed Dec. 14, 1918. Serial No. 266,661. 6 Claims. (Cl. 742—1.)

1. A machine for turning booms, spars and the like having, in combination, means for holding and rotating a log in a vertical position, a pair of guide rods extending longitudinally of said log, a carrier frame slidably mounted upon said rods, a rotary cutter mounted upon said carrier frame and adapted to engage the periphery of said log and means to move said guide rods laterally thereof.

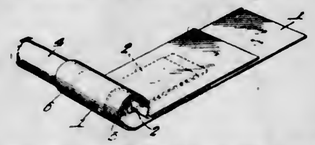
1,350,841. STEERING-WHEEL MOUNTING. LEE RIAL and WILLIAM HEBERN, San Francisco, Calif.; said Hebern assignor of one-fourth to E. J. McLaughlin and one-fourth to Joseph F. Sullivan, San Francisco, Calif. Original application filed Oct. 29, 1917, Serial No. 199,003. Divided and this application filed Jan. 29, 1919. Serial No. 273,902. 10 Claims. (Cl. 70—129.)

1. In combination with the steering column of a vehicle, of a collar fixed thereon and formed with a circumferential groove interrupted by a slot, a wheel journaled on the collar, a lock casing extending from the hub of the wheel and communicating with the groove and slot of the collar, a locking bolt slidably arranged in the casing and engageable in the slot and groove of the collar, a cover plate for the casing having an extension overlying the hub and collar and formed with an opening through which the steering column projects, and a cap inclosing the projecting steering column and having a base flange on which the cover plate extension rests for securing the cap in position.

1,350,842. COMPOUND FOR EXTERNAL APPLICATION. JAMES G. ROMAN, Wilmington, Del. Filed Aug. 12, 1918. Serial No. 249,496. 1 Claim. (Cl. 167—9.)

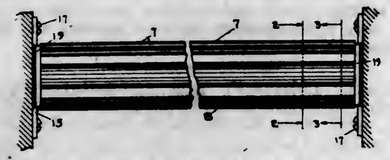
A compound for external use consisting of a boiled mixture comprising a major portion of turpentine, and a minor portion of whites of egg, salt, camphor and vinegar.

1,350,843. HAIR AND SCALP REMEDY. JAMES G. ROMAN, Wilmington, Del. Filed Aug. 12, 1918. Serial No. 249,497. 1 Claim. (Cl. 167—5.)



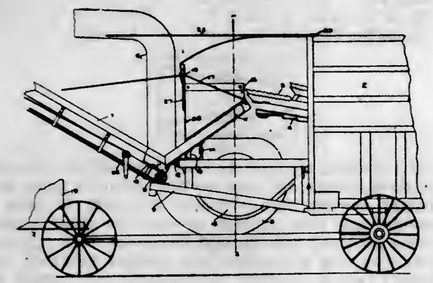
A hair and scalp remedy consisting of a boiled and strained mixture comprising a major portion of fine vinegar, and a minor portion of kerosene oil and castor oil with bay leaves, tobacco, rhubarb, salt, alum, and soap.

1,350,844. WEDGING-BLOCK FOR SHIPBUILDING. RUFO SANCHEZ, Newark, N. J. Filed Dec. 29, 1919. Serial No. 348,116. 3 Claims. (Cl. 61—66.)



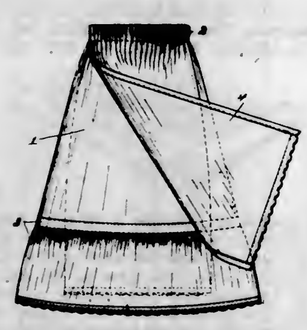
1. A wedging block of the character described comprising three sections, the lower section having its upper face inclined upward, then extended downward to form a shoulder and then inclined upward, the upper section having its under face inclined downward, then extended upward to form a shoulder, then inclined downward, the inclined face of the upper section being convergently related to the inclined face of the lower section, and an intermediate section having convergently related upper and lower faces, each face from the butt end of the section extending inward toward the other end of the section, then outward to form a shoulder, and then inward to the other end of the section, the shoulders on the upper and lower sections confronting the shoulders on the intermediate section, and transverse members disposed between the confronting shoulders of the intermediate section and upper section and of the intermediate section and lower section to thereby lock the sections from lateral movement with relation to each other, the removal of said transverse members permitting said movement of the sections.

1,350,845. PROCESS FOR MAKING TORPEDOES. JOSEPH SCARDONE, Vineland, N. J. Filed Jan. 22, 1920. Serial No. 353,250. 3 Claims. (Cl. 102—25.)



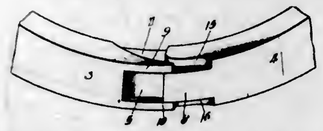
2. The process of wrapping a torpedo, consisting in placing a relatively narrow reinforcing strip on an outer wrapper of thin, absorbent but stout texture, said outer wrapper bearing a coloration area on its outer surface; folding the wrappers near their middle portion; rolling them into a tube of the desired size; folding one end of the outer wrapper to close the end of the tube; depositing the explosive charge in the tube; folding the other end of the outer wrapper to completely incase the explosive charge; dipping the completed torpedo shell in a flour paste; and drying the shell.

1,350,846. CURTAIN-SUPPORT. GEORGE H. SMITH, Providence, R. I., assignor to Charles D. Kenney, Cranston, R. I. Filed May 15, 1920. Serial No. 381,663. 5 Claims. (Cl. 156—19.)



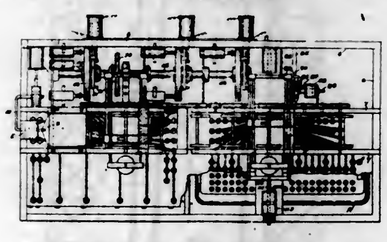
5. A bracket comprising a base, a flat arm integral with an edge of the base, marginal studs on the arm, and resilient inclined fingers integral with an intermediate portion of the arm.

1,350,847. ATTACHMENT FOR THRESHING-MACHINES. JOHN T. SMITH, Hopkins, Minn. Filed June 11, 1917, Serial No. 174,046. Renewed Feb. 2, 1920. Serial No. 355,586. 6 Claims. (Cl. 302—5.)



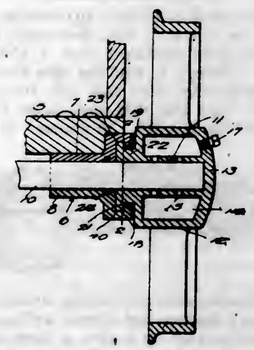
1. The combination, with a threshing machine having an opening in its wall and a straw support and a blower positioned to receive the chaff delivered through said support, of means interposed between said support and said opening and downwardly and outwardly inclined to divert the clean straw from said blower and discharge it through said opening, the chaff and fine material falling through said support into said blower.

1,350,848. UNDERSKIRT. AMY R. STARKWEATHER, Amsterdam, N. Y. Filed Nov. 19, 1919. Serial No. 339,133. 2 Claims. (Cl. 2—42.)



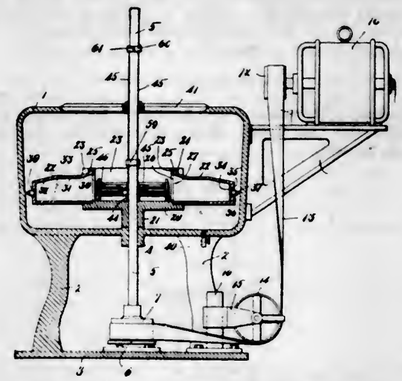
2. An underskirt having a body portion of diaphanous material, and a flap of relatively opaque material permeable to air, said flap being attached at its upper end only to the body of the garment.

1,350,849. PISTON-RING AND THE LIKE. ADOLF STERN, Chicago, Ill., assignor to F. W. Stewart Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1919. Serial No. 322,517. 2 Claims. (Cl. 74—109.)



1. As a new article of manufacture, a piston ring comprising a split ring of suitable material having its end portions lying adjacent to each other and adapted to cooperate with each other in the sealing function, one of said end portions having an exteriorly facing longitudinal recess, and the other of said portions having an interiorly facing longitudinal recess, the side portions of the end portions being cut away adjacent to said recesses in complementary fashion, whereby a tongue is provided on each end portion adapted to seat into the recess of the other end portion, and whereby the sides of the recesses provide a seal with respect to the tongues, substantially as described.

1,350,850. AUTOMATIC PNEUMATIC CARD-TABULATING MACHINE. ARTHUR S. TREW, Portland, Oreg., assignor to Trew Tabulating Machine Company, a Corporation of Oregon. Filed June 21, 1918. Serial No. 241,139. 12 Claims. (Cl. 235—91.)

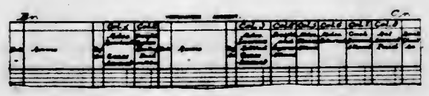


1. In a machine of the character referred to, in combination, card feeding means, automatic card stopping means, pneumatically operated card controlling means, adding mechanism, pneumatic, card-controlled, operating means for selectively operating said adding mechanism, and means for releasing and discharging said card from said machine.

1,350,851. WHEEL-HUB AND BEARING. JAMES ROY ADAMS, Somerset, Pa. Filed Apr. 30, 1919. Serial No. 293,784. 1 Claim. (Cl. 64—26.)

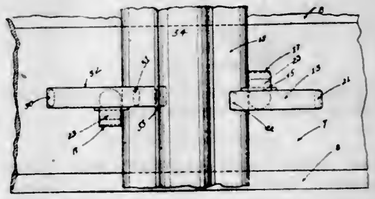
The combination with a split bearing having an annular interior bearing channel, and an axle journaled in the bearing, a traction wheel formed with a hollow hub and having an axle socket portion for receiving the outer end of the axle, and with an annular bearing rib rotatably engaging in the channel, the outer end of the hub being integral with the socket portion to close the latter and provide an abutment wall for the outer extremity of the axle.

1,350,852. PROCESS AND APPARATUS FOR HEEL MANUFACTURE. RICHARD S. AYRES, Brookline, Mass. Filed Oct. 6, 1917, Serial No. 195,047. Renewed May 22, 1920. Serial No. 383,546. 2 Claims. (Cl. 92—58.)



1. The improved process in the art of manufacturing boot and shoe heels from pulp material, which consists in applying a predetermined mass of pulp in a rotating receptacle, automatically separating said mass of pulp into a plurality of equal parts, simultaneously discharging each part into a plurality of heel molds arranged around the receptacle, and expressing the moisture therefrom, by centrifugal force, and finally, compressing each portion in its respective mold.

1,350,853. GAS-LIGHTING DEVICE AND METHOD OF MAKING THE SAME. GEORGE BLUMRICK, Gloucester, N. J., assignor to Welsbach Company, Gloucester, N. J., a Corporation of New Jersey. Filed Sept. 18, 1919. Serial No. 324,647. 8 Claims. (Cl. 67—98.)



1. As a new article of manufacture, a tubular limp mantle for upright Bunsen burners, comprising a body portion folded to form reinforcing ribs, and having the upper end of said body portion stitched in folded condition, sections of said upper end being cut away to form a plurality of gas escape openings, substantially as described.

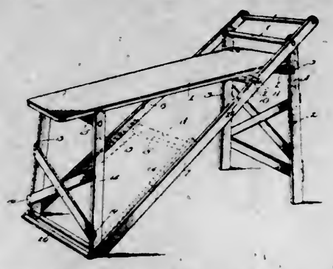
1,350,854. BUSINESS-RECORD AND INCOME-TAX BOOK. HARRY G. CARTER, Northfield, N. H. Filed Feb. 7, 1920. Serial No. 356,960½. 11 Claims. (Cl. 283—66.)

1. An account book comprising correlated groups of accounts, the accounts of one of the groups having appropriate headings for the entry of data for a short period of time, another of the groups comprising a recapitulation of the accounts of the first group, an income tax return form having indicia thereon denoting columns in the recapitulation from which the data for the income tax return are taken.

1,350,855. RAIL-CLAMPING DEVICE FOR METAL TIES. JOHN W. CHAMPION, Pueblo, Colo. Filed Feb. 25, 1919. Serial No. 279,086. 5 Claims. (Cl. 238—353.)

1. In combination, a rail, a metal tie engaged by the rail, the tie having an opening adjacent the rail, a rail-holding device having a shank occupying said opening and having a jaw extending inwardly beyond the shank and adapted to engage the tie from below, the device having a rail-base-engaging part above the shank and an opposing tie-engaging part also above the shank and extending outwardly beyond the shank and engaging the top of the tie, the opening in the tie occupied by the shank being elongated in a direction parallel with the rail, a key inserted in the opening and lying alongside the rail, and a keykeeper also inserted in the opening and lying alongside the rail and engaging the key to retain the same, said device having a bracing portion extending upwardly into engagement with the side portion of the ball of the rail.

1,350,856. EXPANSION-JOINT FOR ELECTRIC-CURRENT-COLLECTOR BARS. ELMER A. DAVIS, Harvey, Ill., assignor to Whiting Foundry Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Mar. 24, 1919. Serial No. 284,623. 2 Claims. (Cl. 191—22.)

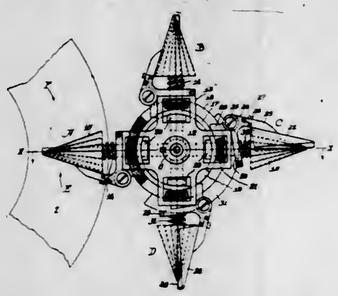


1. In mechanism of the class described, the combination of two alined adjacent bars, one of which has a flange extending from its face, a finger member overlapping both bars slidable along the face of the bar, which carries the flange, adjacent to said flange, means rigidly securing the finger member to the other bar, a second finger member overlapping both bars and lying immediately adjacent to the first mentioned finger member, means securing the second finger member to the bar on which the first finger member slides, and a cover plate carried by one of the bars embracing the portions of the two finger members adjacent thereto, secured to said bar by the same mechanism which secures the finger member which is attached to it.

1,350,857. FOLDING IRONING-BOARD. VICTOR M. DE CANO, Chicago, Ill., assignor of one-half to William H. Hinz, Oak Park, Ill., and one-half to Raymond F. Starr, Chicago, Ill. Filed Apr. 4, 1919. Serial No. 287,462. 4 Claims. (Cl. 68—12.)

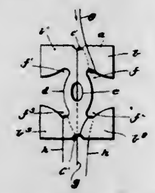
1. In combination, two frame devices hinged together near one end of each, one of the frame devices being longer than the other, an ironing board hinged at one end to the shorter device, between said hinge connection

and the foot of said shorter device and having a part adapted to rest on the longer device and be held hori-



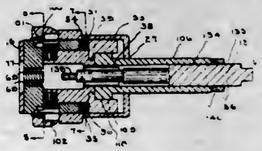
zontal when the frame devices are set on the floor with the shorter device in an upright position.

1,350,858. METHOD OF MAKING CARBON DISULFID. HERBERT H. DOW and CHARLES J. STROSACKER, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 15, 1918. Serial No. 245,094. 7 Claims. (Cl. 23—10.)



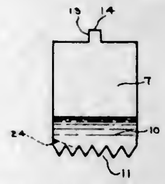
1. The method of making carbon disulfid which consists in bringing sulfur dioxid in contact with heated coke, and admixing sufficient oxygen with such dioxid to maintain such coke at the requisite temperature.

1,350,859. CONE-ROLLING MACHINE. ELZEAR JOSEPH DROUILLARD, Detroit, Mich. Filed Feb. 27, 1920. Serial No. 361,844. 12 Claims. (Cl. 107—58.)



1. The combination of a batter baking means, a rotary mold adapted to remove baked batter from said means and impart a shape thereto, and means adapted to rotate said mold.

1,350,860. BALE-TIE. ALFRED J. ERSTED, Portland, Oreg. Filed Sept. 7, 1918. Serial No. 253,004. 3 Claims. (Cl. 24—18.)



2. A bale tie consisting of a flat double ended T-shaped plate having centrally located triangular notches at the sides thereof, and a plurality of notches or recessed portions arranged centrally of said plate, the bases of said triangular notches being adjacent said centrally arranged recesses and at right angles thereto.

1,350,861. THREADING-TOOL. JOHN J. FLYNN, Providence, R. I. Filed Oct. 24, 1919. Serial No. 332,872. 8 Claims. (Cl. 10—96.)

1. In a threading tool, a shell provided with an opening, a head slidably mounted in the shell, a shank on the head extending through the opening, a chaser carrier slidably mounted in the shell and movable independently of the head, and chasers yieldingly mounted in the carrier.

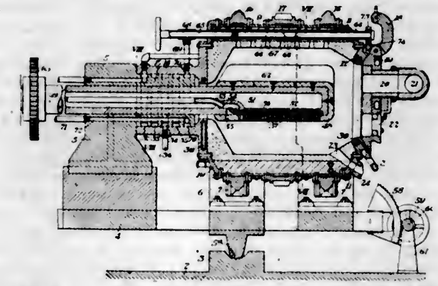
1,350,862. CHASER. JOHN J. FLYNN, Providence, R. I. Filed Oct. 25, 1919. Serial No. 333,347. 1 Claim. (Cl. 10—96.)

In a chaser, a body provided with a series of teeth upon its lower end, and provided upon its upper end midway its end faces with a transversely disposed arcuate flange, and each side of the flange with an arcuate intermediate shoulder receding from the flange, and exterior each intermediate shoulder with an end shoulder disposed eccentrically to the flange and to the other shoulders.

1,350,863. SUSPENSORY. JOHN C. FOWLER, Syracuse, N. Y. Filed Dec. 7, 1915. Serial No. 65,609. 1 Claim. (Cl. 128—162.)

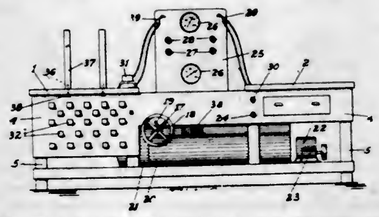
A suspensory comprising a hammock-shaped bag, a continuous stiffening tape applied to the edge thereof, means for holding the bottom of the bag in the form of an inward disposed ridge, a bracing tape secured intermediate of its ends to the continuous stiffening tape and extending across the bottom of the bag transversely of said ridge, the ends of said bracing tape extended beyond said stiffening tape to form supporting tapes.

1,350,864. INTERNAL-COMBUSTION ENGINE. SAMUEL B. GOLD, Independence, Mo., assignor to S. W. Livingston, Washington, D. C. Filed July 17, 1916. Serial No. 109,815. 1 Claim. (Cl. 123—122.)



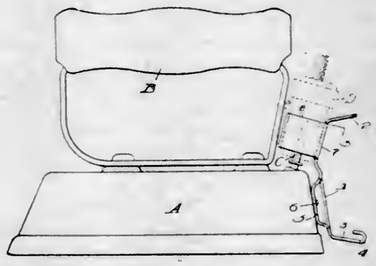
In an internal combustion engine the combination of a cylinder, a housing underlying and extending transversely

of the cylinder and provided at one end with a gas receiving and at the other end with a gas discharging opening, an exhaust gas pipe connecting the cylinder with the receiving opening of the housing and a discharge exhaust gas pipe connected with the other end of the housing; said housing having a front wall substantially straight and substantially in line with said openings and a back wall bowed rearwardly from and between said openings, the front wall having a portion projecting rearwardly into the housing to constrict the central portion of the passage



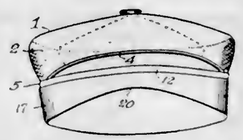
thereof and intercept the direct path of travel of the exhaust gases from the exhaust gas supply pipe and deflect them rearwardly through said constricted throat of the passage, said rearwardly projecting portion having a horizontal cylindrical opening extending from front to rear to give access to the valve chamber, a removable plug closing the last named opening, and forming a journal for the valve, and vaporizing fuel supply and discharge pipes communicating with said receiving and discharging openings.

1,350,865. METALLURGICAL FURNACE. DANIEL E. GRIFFITHS, Pittsburgh, Pa. Filed Oct. 21, 1918, Serial No. 259,061. Renewed Feb. 16, 1920. Serial No. 359,200. 25 Claims. (Cl. 263—33.)



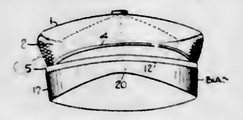
13. A rotary furnace arranged to receive the material to be treated, a relatively stationary burner within said furnace having downwardly extending fuel and air ports, means for delivering gaseous fuel and air to said ports, means to rotate said furnace, a blast pipe extending longitudinally in the wall of said furnace, means for supplying a blast of air to said pipe, there being a plurality of twyers communicating with said pipe, automatic means controlled by the rotation of the furnace for opening and closing communication between the twyer openings and said blast pipe, and means for cooling the walls of the furnace and the burner; substantially as described.

1,350,866. APPARATUS FOR RADIATOR-REPAIRING. GEORGE S. HALL, Chico, Calif. Filed May 22, 1919. Serial No. 298,980. 3 Claims. (Cl. 113—111.)



1. In a work bench arranged and equipped for the repair of radiators thereon, a plurality of independent horizontal bars slidably mounted in the side of the bench and arranged to be pulled out a predetermined distance, and removable uprights on the top of the bench projecting upwardly therefrom at the edge thereof adjacent the bars.

1,350,867. ELECTRIC FLATIRON. HENRY KOCOUREK, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1919. Serial No. 318,997. 6 Claims. (Cl. 219—25.)

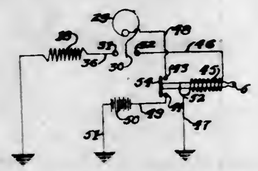


6. In combination with an electric flatiron, a rest member having off-set lugs by which it is attached to the body of the iron, said member being held otherwise out of contact with said body and said lugs being of relatively small cross-section at their junctions with the rest member, said member having its own cross section materially reduced adjacent said junctions by an aperture extending partially across its width to retard conduction of heat to and within the rest member.

1,350,868. METHOD OF MANUFACTURING CAPS. CHARLES KORNFELD, New York, N. Y. Filed Mar. 13, 1919. Serial No. 282,391. 6 Claims. (Cl. 2—106.)

1. The method of making a cap which comprises folding a protector strip back upon itself, inserting the edges thereof between the two plies of a hinge and sewing the four edges together, inserting the top edges of the two plies of hinge material between the cap body and lining and sewing the four edges together, and securing the lining within the cap body.

1,350,869. CAP. CHARLES KORNFELD, New York, N. Y. Original application filed Mar. 13, 1919, Serial No. 282,391. Divided and this application filed Feb. 28, 1920. Serial No. 362,061. 2 Claims. (Cl. 2—106.)

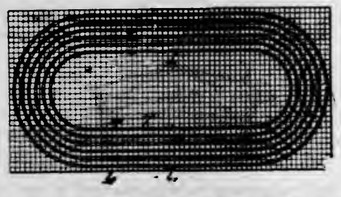


1. A cap comprising in combination a cap body, a double-ply hinge band attached thereto by a hidden seam, the lower edges of the hinge being turned in, and a bias cut head protector formed by the folded fabric with a closed flap at the bottom and having both top edges of the folds thereof sewed to the turned-in bottom edges of the hinge band so that the seam is hidden within the plies of the hinge band.

1,350,870. PROCESS OF STERILIZING AND PACKAGING CHEESE. JAMES L. KRAFT, Chicago, Ill. Filed Oct. 18, 1919. Serial No. 331,632. 4 Claims. (Cl. 99—15.)

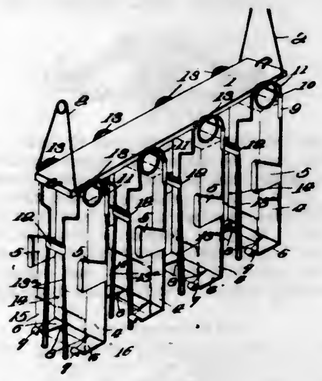
4. The process of putting up cheese of the Cheddar genus, which consists in melting the cheese, actively stirring the cheese during melting and while melted and maintained at a temperature between 120° F. and 150° F. until brought to a stably-homogenized condition, then placing it in suitable sealed containers and subjecting it to a temperature in excess of 160° F. maintained for a period of not less than fifteen minutes.

1,350,871. THERMOSTATIC CONTROL MECHANISM FOR HYDROCARBON-ENGINES. LEWIS H. LAMONT, Chicago, Ill. Filed Nov. 30, 1917. Serial No. 204,544. 8 Claims. (Cl. 123—122.)



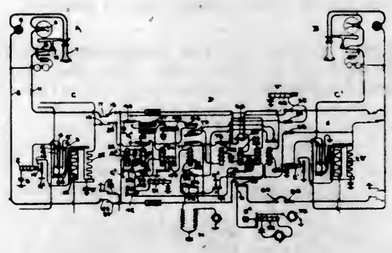
4. In a heating system for the fuel of a hydrocarbon engine, means for heating the fuel, a thermostatic element controlling the supply of energy to said means, a switch adapated to control supply of energy to said means, and mechanism controlled by the thermostat for opening said switch subsequent to the cutting off of supply of energy to said means by said thermostat.

1,350,872. METAL ROAD-TRACK. CHARLES J. LINDEN, Iron Mountain, Mich. Filed May 24, 1920. Serial No. 383,816. 7 Claims. (Cl. 238—4.)



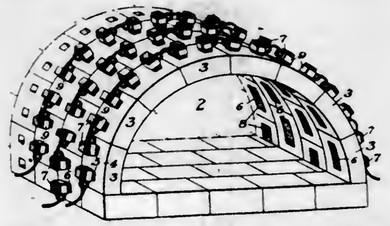
1. Track rails and supports therefor formed out of sheet metal bent upon itself to form a supporting flange or web and tread portions bent out from said flange or web, and sheet metal spacers and supports for said rail having their ends bent upwardly and secured to said flange or web.

1,350,873. AMUSEMENT DEVICE. CARL LOMBARDO, Dunkirk, N. Y., assignor of one-third to Joseph Familet, Dunkirk, N. Y. Filed Apr. 24, 1920. Serial No. 376,288. 3 Claims. (Cl. 104—60.)



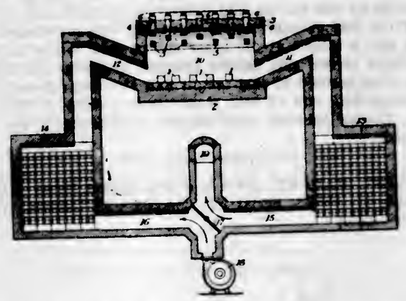
1. An amusement apparatus having a base or platform provided with continuous parallel track rails, and intervening continuous seats for electrical conductors, said track rails being adapted for progressive traverse by cars or carriers, the base or platform consisting of a plurality of detachable sections or members of substantially uniform dimensions respectively provided with sections or members of said track rails and conductor seats, and means for securing said sections or members in their prescribed relative positions.

1,350,874. BAG AND TWINE HOLDER. EINAR LORANGE, Luverne, Minn. Filed July 20, 1917. Serial No. 181,805. 1 Claim. (Cl. 211—2.)



A bag and twine-holder comprising a plate or rack adapted to be suspended in position, a plurality of holders pivotally attached to the supporting plate or rack transversely thereof and in longitudinal alinement, each of which comprises a back provided with guides consisting of forwardly-extending side plates bent inwardly at their outer ends, and a forwardly-extending bottom rest bent upwardly at its outer ends, between which side plates and rest the bags to be held are supported, the inwardly-projecting ends of the side members and the upwardly-projecting ends of the bottom members adapted to confine the bags within the guides when one is being removed therefrom, and retaining members for holding the bags in place comprising a single piece of wire bent into shape, the upper ends of these retaining members in the form of convolutions secured to the back, and resilient retaining means provided with longitudinal openings through which the operator may seize the bottom fold of the bag for removing the latter.

1,350,875. MEASURED-SERVICE TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1917. Serial No. 208,579. 26 Claims. (Cl. 179—9.)



26. In a telephone system, a subscriber's line, means for making said line busy, a meter for said line, means for operating said meter when said line is called while busy.

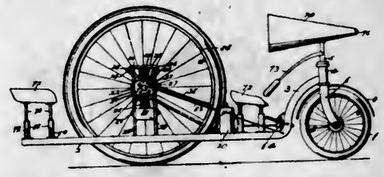
1,350,876. ELECTRIC FURNACE. WALTER S. MAYER and WALTER C. KENNEDY, New Brighton, Pa. Filed Dec. 15, 1916. Serial No. 137,100. 15 Claims. (Cl. 219—35.)

1. An electric resistance furnace having a wall including a plurality of resistance units, each comprising a block of refractory material and a resistance element assembled therewith to form a part of said unit, substantially as described.

1,350,877. METHOD OF OXIDIZING MATERIALS IN ELECTRIC FURNACES. WALTER S. MAYER and WALTER C. KENNEDY, New Brighton, Pa. Filed Mar. 17, 1917. Serial No. 155,383. 7 Claims. (Cl. 204—64.)

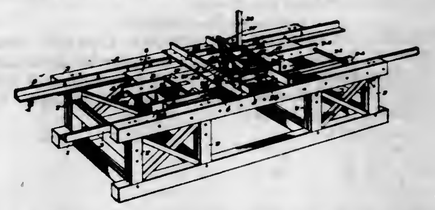
1. The method of scaling steel billets to remove surface imperfections which consists in heating the billets in an electric furnace to a scaling temperature while supplying to the furnace chamber sufficient oxygen to form the scale on the billets, substantially as described.

2. The method of surface oxidizing metal for the purposes described, which consists in heating the metal in an electric furnace while maintaining an oxidizing atmosphere in the furnace chamber; substantially as described.



3. The method of surface oxidizing metal to remove surface imperfections, which consists in electrically heating the metal to a temperature sufficient to scale its surface and supplying a regulated amount of oxygen to the heated metal sufficient to form the surface scale, substantially as described.

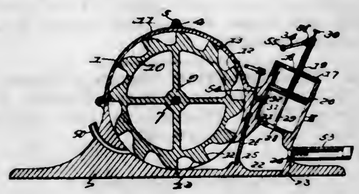
4. The method of treating materials for the purposes described, which consists in electrically heating the materials and supplying a regulated predetermined amount of oxygen to the heated materials; substantially as described.



5. The method of treating materials for the purposes described, which consists in heating the materials in an electric furnace, while maintaining an oxidizing atmosphere in the furnace chamber; substantially as described.

1,350,878. MOTORCYCLE. GEORGE W. MOULDIN, Danville, Ill. Filed Mar. 22, 1918. Serial No. 224,025. 1 Claim. (Cl. 208—101.)

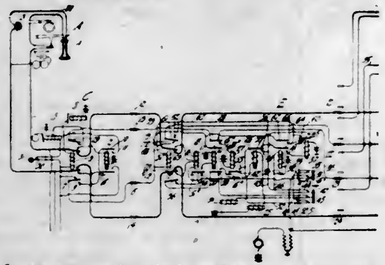
In a motor vehicle, a frame, upstanding supports carried on opposite sides of the frame, each support embodying a pair of spaced standards formed with longitudinal slots therein, a cross-bar spanning the standards at their upper ends and connecting with the same, a bearing positioned between the two standards of each pair and provided with end projecting lugs entering and having a sliding engagement in said slots, blocks mounted between the standards comprising each pair, each block being provided with end trunnions entering the slots of its respective standards and having threaded extremities projecting beyond the standards, nuts engageable on said threaded extremities and bearing against the outer faces of the standards, whereby the blocks may be adjusted and away from the cross-bars.



1,350,879. SHINGLE-CUTTING MACHINE. ANDRO NYLUND, Juneau, Alaska. Filed Dec. 11, 1917. Serial No. 206,665. 3 Claims. (Cl. 144—162.)

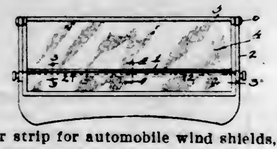
1. A shingle cutting machine comprising a main frame, a reciprocating carriage mounted thereon, a double-edged planing-knife carried thereby, slanting planer beds arranged on either side of said double-edged planing knife, a rigid frame arranged transversely of said reciprocating carriage, a vertically movable frame pivoted to said rigid frame, rotatable gripping-dogs journaled in said vertically movable frame whereby the block is positioned upon said slanting beds, and gripping-bars carried by said rigid frame adapted to engage the ends of said shingle-block, whereby the latter is held in the position assumed when placed upon the slanting beds.

1,350,880. ROTARY GAS-ENGINE. HARRY E. OSBORNE, Spokane, Wash. Filed Dec. 21, 1918. Serial No. 267,795. 4 Claims. (Cl. 60—41.)



1. In an internal combustion engine, a stator, a rotor revolubly mounted in the stator, the stator being formed with a combustion chamber and being further formed with a cylinder in communication with the combustion chamber, a piston movable in the cylinder, means operatively connecting the piston with the rotor, and means carried by the piston for closing communication between the cylinder and the combustion chamber for the useful purpose specified.

1,350,881. THREAD HOLDING AND CUTTING ATTACHMENT FOR SPOOLS. LOUISE M. PFUNDER, Portland, Oreg. Filed Nov. 6, 1919. Serial No. 336,223. 2 Claims. (Cl. 30—14.)

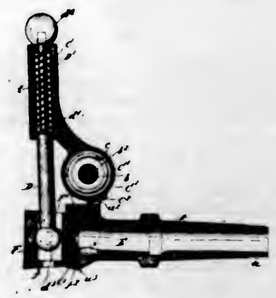


1. A thread holder and cutter attachment for spools made of a thin flat plate of resilient metal, consisting of an annular main part having a central opening corresponding in size with the hole of the spool, said annular main part being provided with pegs for fastening on the head of the spool, and having integral opposite arms extending to the rim of the spool head and adapted to bear on the latter, thereby assuring that one or the other of said arms will bear on the spool head and hold the thread end notwithstanding said attachment is not affixed in parallel relation to the spool head, the edges of said arms serving as means for cutting the thread.

1,350,882. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1917. Serial No. 161,958. 11 Claims. (Cl. 179—18.)

1. In an automatic telephone system, subscribers' lines, selector switches accessible to said subscribers' lines, trunks accessible to said selector, means whereby one of said subscribers may operate said selector to extend a connection from his line to any one of said trunks, means whereby another one of said subscribers is prevented from operating said selector to extend connection to a portion of said trunks while not precluded from access to others, a measured service device for said other subscriber, a circuit for said measured service device, and a circuit for controlling said means, both of said circuits extending over a common conductor.

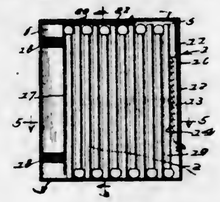
1,350,883. WEATHER-STRIP. GEORGE C. REEVES, Chicago, Ill., assignor to Dryden Rubber Company, a Corporation of Illinois. Filed Mar. 28, 1919. Serial No. 285,721. 1 Claim. (Cl. 296—93.)



A weather strip for automobile wind shields, comprising a Z-shaped strip of impervious resilient material, and a spring clip permanently attached thereto, said strip and clip adapted detachably to engage the opposite edges of one portion of the wind shield.

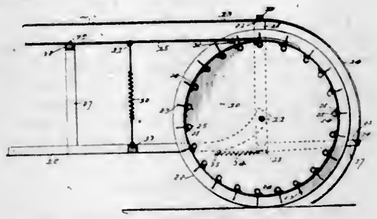
1,350,884. RAZOR-SHARPENER. FELIX ROGOWSKI, Chicago, Ill. Filed Jan. 13, 1919. Serial No. 270,867. 2 Claims. (Cl. 51—16.)

1. A razor sharpener, comprising a stone having beveled edges; a sheet metal holder having upwardly turned side flanges fitting the beveled side edges of said stone; a rebent lip at one end of said holder forming a flange abutting the end of said stone; mounting means secured to said lip; a tongue at the other end of said holder having inwardly turned side flanges adapted to engage the sides of a strop secured to said tongue and abutting against the corresponding end of said stone; and a strop riveted to said tongue between said flanges, substantially as described.



1,350,885. FAUCET. LEVI L. ROWE, Boston, Mass. Filed Sept. 21, 1918. Serial No. 255,153. 13 Claims. (Cl. 251—134.)

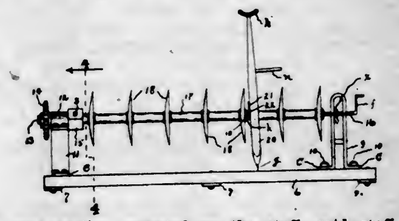
8. In a faucet, a stationary tubular member, a tubular valve adapted to slide longitudinally in said member, said valve having a socket in the outer end thereof, a handle pivotally mounted on said stationary member and comprising a rod one end of which is located in said socket, said rod being adapted to be withdrawn from said socket without disassembling to allow said valve to be removed from said stationary member, and means normally to hold said rod in said socket.



13. The faucet above described comprising a stationary tubular member connectible to a tank and a slidable tubular valve located therein, the said valve being closed at both ends and open along its sides and extending when in closed position into such tank whereby the chamber within it may be filled when said valve is closed and when said valve is open the connection between its chamber and such tank may be closed whereby said valve at each sliding opening motion will deliver only a predetermined quantity of liquid, and means for operating said valve.

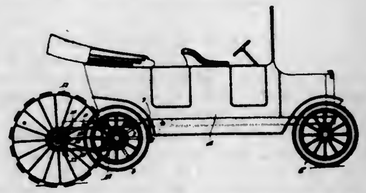
1,350,886. SINGLE-DELIVERY MATCH-BOX. FRANK JOSEPH SCHOLZ, Helena, Mont., assignor of one-half to Raymond Wendel Scholz, Helena, Mont. Filed Feb. 14, 1918. Serial No. 217,118. 1 Claim. (Cl. 206—27.)

A match box comprising a rectangular body the top of which is provided with an exit opening and with a rectangular opening, the front wall being provided with a rectangular opening, a swingingly mounted door serving as one side wall of the body, so that matches in bulk may be placed therein, a latch carried by the door for holding the same in closed position, a follower plate carried within the body, springs compressed between the follower plate and the rear wall of the body, the follower plate bearing upon matches placed in the body and forcing them toward the forward end where the foremost match is in position to be ejected through the exit opening in the top of the body, flanged guides formed on the inner surface of the front wall adjacent the rectangular opening therein, an ejecting plate mounted in the flanged guides and comprising a plate-like body, a serrated match engaging bar and a finger piece which projects through the said rectangular opening, whereby the raising of the ejecting plate may effect the ejection of a match through the exit opening, and a slide closing the rectangular opening in the top for the purpose specified.



1,350,887. HAY-LOADER. ELVIN T. SEATON, Danbury, Iowa. Filed Oct. 21, 1919. Serial No. 332,260. 5 Claims. (Cl. 56—359.)

1. A hay loader having a cylindrical drum, a fork arranged with its fingers in concentric relation with the wall of the drum, rearwardly yielding teeth carried by the drum, stripper arms terminally arranged in position to engage the hay or other material carried by the drum, and a trip member arranged in the path of said teeth for successively repressing the latter to withdraw them from engagement with said material.



1,350,888. DISK-SHARPENING DEVICE. HENRY C. SIMONS, Odebolt, Iowa. Filed May 10, 1919. Serial No. 296,271. 2 Claims. (Cl. 76—85.)

1. In an apparatus for sharpening the disks of a disk-holding shaft, a pair of elongated supports connected side by side to form a channel therebetween, each support being provided with a flange disposed to overlie a part of said channel, a standard stationary with the supports, a revoluble stub-shaft having bearings on the stationary standard and provided with a clamping-member for supporting one end of the disk-holding shaft, a second standard substantially of inverted U-shaped having foot-members engaging said flanges and provided with a centering-element, means on the foot-members of the second standard adapted to engage said flanges for adjusting said second standard longitudinally of the supports for engagement of said centering element with the opposite end of the disk-holding shaft, a staff, and a cutting-blade triangular

in cross-section mounted on the staff, said staff being adapted to be disposed in engagement with one of the supports with its cutting-blade engaging a disk of said disk-holding shaft.

1,350,889. AUTOMOBILE TRACTOR. LEONARD S. SZUMKOWSKI, Chicago, Ill., assignor to Ursus Motor Company, Chicago, Ill. Filed Dec. 17, 1917. Serial No. 207,505. 4 Claims. (Cl. 180—16.)

1. The combination of a motor-driven vehicle having driving wheels at one end; supplemental tractor wheels detachably connected with the vehicle, said tractor wheels, when applied, being adapted to elevate said driving wheels to a position out of contact with the ground, the connection of said tractor wheels with said vehicle comprising two bars detachably connected with and projecting rearwardly from said vehicle; a longitudinally adjustable axle carrying said tractor wheels; and means for operatively connecting said tractor wheels with said driving wheels, substantially as described.

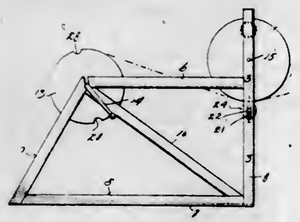
1,350,890. BOTTLE-TAG. WILLIAM J. TANZEY, Detroit, Mich., assignor, by mesne assignments, to Frederick C. Mathews Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 25, 1918. Serial No. 230,686. 4 Claims. (Cl. 40—4.)

1. As a means for presenting indicia, a flat sheet-like tag of paper board or the like and having the body portion adapted to carry indicia, and an end aperture adapted

to embrace the neck of a container, said body portion having dimensions greater than those of the apertured end portions sufficient to cause the tag to extend away from the container a distance such as to prevent location of a plurality of containers in immediate proximity, the position of the tag on the container retaining the latter exposed to disclose its contents, whereby free visual inspection of contents is permitted in the presence of the tag and removal will be practically required in placing the container in use.

1,350,891. ALLOY. VICTOR PEREZ TAYLOR, New York, N. Y. Filed Aug. 4, 1919. Serial No. 315,174. 9 Claims. (Cl. 75—1.)

1. An alloy containing aluminum 80 to 100 parts, copper 8 to 17 parts, and tungsten.

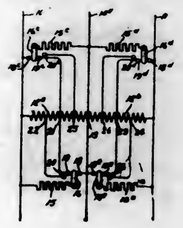


1,350,892. ZINC ALLOY. ARRIGO TEDESCO, Turin, Italy, assignor to Societa Anonima Stabilimenti Biak, Turin, Italy, a Company of Italy. Filed July 11, 1919. Serial No. 310,257. 1 Claim. (Cl. 75—1.)

A high-strength zinc alloy, containing between 85 and 93% of zinc, between 3 and 12% of aluminum, and between 0.5 and 4% of tin.

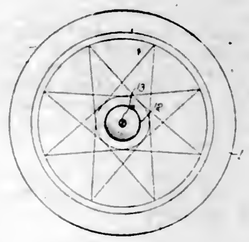
1,350,893. METHOD FOR MANUFACTURING ALUMINIUM ALLOYS. ARRIGO TEDESCO, Turin, Italy, assignor to Societa Anonima Stabilimenti Biak, Turin, Italy, a Company of Italy. Filed July 11, 1919. Serial No. 310,263. 2 Claims. (Cl. 75—1.)

1. A method of producing a zinc-copper-aluminum alloy containing a high percentage of aluminum, consisting in preparing, separately from the aluminum bath, an addition alloy comprising about 66% of zinc, 9% of copper and 25% of aluminum; and thereafter associating such alloy, in proportion up to 30% of the final alloy, with the aluminum bath.



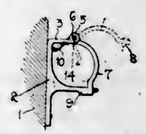
1,350,894. ROPE-MEASURING DEVICE. FRANK THIEL, Remsen, Iowa. Filed Sept. 12, 1916, Serial No. 119,702. Renewed Mar. 18, 1920. Serial No. 367,002. 1 Claim. (Cl. 33—129.)

The combination with a support having spaced vertical uprights and horizontal bars leading therefrom, the horizontal bars being provided with notches, of a reel having a shaft detachably journaled in said notches, a pulley journaled in the uprights on a horizontal axis and having a peripheral groove for frictionally receiving a rope when fed from the reel, a roller having resiliently supported bearings in the uprights and contacting with the periphery of the pulley, and registering means mounted upon one of the uprights and actuated by the pulley.



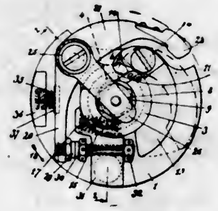
1,350,895. HEATING DEVICE AND CONTROL THEREFOR. STUART THOMSON, Washington, D. C., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1918. Serial No. 219,297. 3 Claims. (Cl. 171—97.)

1. In combination, a supply circuit, an auto-transformer connected thereto, a plurality of sets of heating units connected to different sections of said auto-transformer, means for varying the energy supplied to a given unit, each set comprising two groups of units which



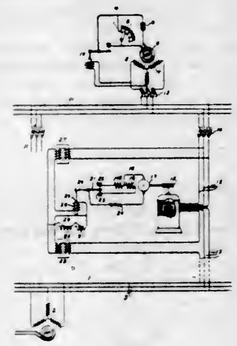
are connected to different parts of the given section when the unit is connected for less than its full energy supply.

1,350,896. DEVICE FOR HOLDING EXTRA WHEELS ON BODIES OF AUTOMOBILES. CHARLES M. TRAMMELL, Lakeland, Fla., assignor of one-half to Edward A. Henske, Washington, D. C. Filed Oct. 25, 1919. Serial No. 333,283. 5 Claims. (Cl. 70—14.)



1. A device for locking extra wheels upon bodies of automobiles consisting of a socket member, with flanges formed within the socket with ratchet teeth in the edges of said flanges, a plug adapted to engage said socket and having lugs coöperating with the flanges to retain the plug, and means for preventing the plug from turning when in a locked position.

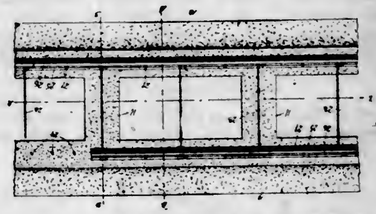
1,350,897. DEVICE FOR HOLDING TIRES UPON AUTOMOBILES. CHARLES M. TRAMMELL, Lakeland, Fla., assignor of one-half to Edward A. Henske, Washington, D. C. Filed Oct. 25, 1919. Serial No. 333,284. 1 Claim. (Cl. 224—29.)



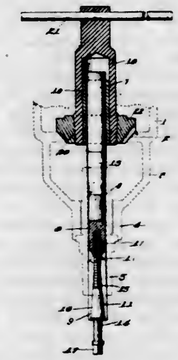
In a device for holding tires upon automobiles, the combination of a bracket securable to an automobile and having a U-shaped portion, a tire retaining element comprising a longer and an angled shorter arm, said element being pivoted to one of the ends of said U-shaped portion and automatically operable co-acting, positive locking means carried by said longer arm and said end of the U-shaped portion for positively locking said longer arm to said end of the U-shaped portion, when said longer arm is moved against said U-shaped bracket end.

1,350,898. CIRCUIT-BREAKING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. JEAN EDOUARD TUSCHER, Neuchâtel, Switzerland. Filed May 20, 1920. Serial No. 383,010. 5 Claims. (Cl. 200—31.)

1. A circuit breaking mechanism for internal combustion engines comprising a disk, a contact carried by said disk, a two-armed lever fulcrumed on said disk, a contact carried by one arm of said lever for engaging the first mentioned contact, yieldable means carried by said disk and bearing against said arm of the lever for holding the contacts normally engaged, a striker carried by the other arm of said lever adapted to move the contacts apart, a hub for said disk having a cam portion lying in the same plane with said lever, a weighted arm pivoted on said disk in the same plane with said lever and having a nose adapted to coöperate with the cam portion of said hub whereby to shift the disk when the weighted arm swings outwardly under the influence of centrifugal force, and means to yieldably hold the hub and disk in an initial position against the action of said nose on said cam, substantially as described.



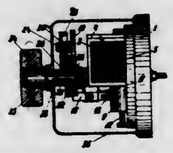
1,350,899. ELECTRICAL SYSTEM OF POWER TRANSMISSION. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 15, 1918. Serial No. 262,741. 6 Claims. (Cl. 171—119.)



1. The combination with a plurality of sources of alternating current, of a distribution circuit supplied thereby, voltage modifying means interposed between one of said sources and said circuit, and power factor responsive means for regulating said voltage modifying means to control the power factor of the load imposed upon one of said sources.

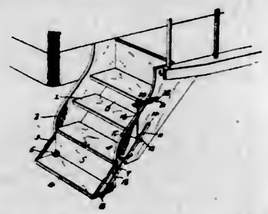
1,350,900. RAILROAD-BED AND RAIL-SUPPORT. GEORGE S. USHER, Waco, Tex. Filed May 1, 1920. Serial No. 378,084. 2 Claims. (Cl. 238—7.)

1. A railway road bed comprising spaced rail supporting bodies of concrete material connected at intervals by bonding sections of concrete material, metal studs embedded at spaced intervals in the bodies and extending above the upper surfaces of the same, and rail supporting stringers supported upon the bodies and having sockets to receive the projecting portions of the studs.



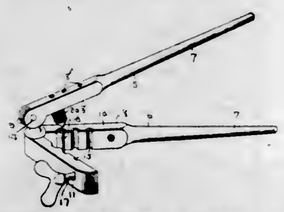
1,350,901. TOOL FOR REFACING VALVE-SEATS. LESTER R. VAN VOLKENBURG, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed July 10, 1918. Serial No. 244,247. 5 Claims. (Cl. 90—12.5.)

1. A tool for grinding a valve seat located in the metal of a cylinder head and rigidly alined with a smooth surfaced valve stem support, having in combination a rod, smooth surfaced from end to end, and adapted to be passed loosely through the valve seat from the engine side thereof and through a remote valve stem support, means co-acting with the smooth valve stem support for holding the rod rigidly longitudinally and laterally therein, with its journaled portion positioned in the transverse planes of the valve seat, and a rotary tool carrier loosely fitted to the rod and adapted to slip longitudinally thereon when in operation.



1,350,902. ELECTROMAGNETIC OVERLOAD CUT-OUT MAGNET. PIETER GERRIT VAN WIJK, Geldermalsen, Netherlands. Filed June 13, 1918. Serial No. 239,843. 3 Claims. (Cl. 200—89.)

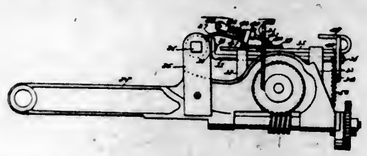
1. In an electromagnetic overload cut-out or switch of the type having a solenoid adapted to be energized by the current, and a switch releasing armature operative by the solenoid, the combination of a pair of members relatively rotatable about a common axis, a circuit closing lever movably mounted on one of said members, the



other member having a notch or recess with which a part of said lever coöperates, and a detent controlled by the armature of the solenoid and normally restraining one of said members from rotation relatively to the other member, relative rotation between the members acting to actuate said lever to control the circuit through the switch.

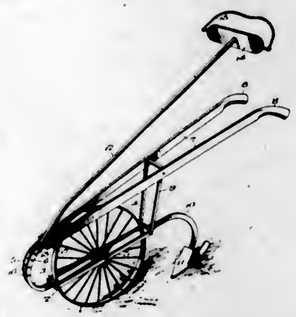
1,350,903. FOLDING CAR-STEP. WILLIAM R. WALLINGSFORD, Tinsman, Ark. Filed Dec. 10, 1918. Serial No. 266,077. 1 Claim. (Cl. 105—448.)

A folding car step structure comprising the combination with the lower fixed tread and the side supports of car steps, of a rock shaft journaled transversely of the lower ends of said side supports, a folding riser rigidly secured at its upper edge to said rock shaft, a folding tread hingedly connected with the lower edge of said riser, toggle suspension links at each side of the steps and connecting said folding tread and rock shaft, an upwardly inclined lever pivotally connected at its lower end with said tread a second lever pivotally connected at one end with one of said side supports and having an upwardly breaking knee joint connection with the upper end of the first named lever, an upwardly extending operating rod pivotally connected with the upper end of said first named lever and having its upper end provided with an extension and a handle, and a combined guide and keeper having a stop shoulder beneath which the extension on said rod is adapted to engage to lock the folding step structure in its position of use, said rod being movable upwardly whereby to break said knee joint.



1,350,904. PIPE-FLANGING TOOL. JOHN F. WALTERS, Battle Creek, Mich. Filed Oct. 17, 1919. Serial No. 331,280. 5 Claims. (Cl. 153—79.)

5. The combination with a tube clamp, of a swinging member movable toward and away from the tube when engaged in the clamp, and a flanging element mounted for self-adjustment in said movable member and detachable therefrom.

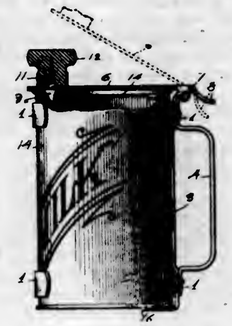


1,350,905. SPINNING APPARATUS. EDWARD AUSTIN WATSON, Greenville, S. C. Filed Dec. 11, 1919. Serial No. 344,042. 5 Claims. (Cl. 242—43.6.)

1. In a traverse controlling mechanism for spinning machines, the combination with a builder cam and a builder arm, a traverse controlling cam auxiliary to the builder cam and carried thereby, a rotating member mounted on the builder arm adapted to engage the second mentioned cam, an escapement controlled by the second mentioned cam, means for holding the roller and escapement in operative relation to the second mentioned cam, means whereby the escapement causes the release of the

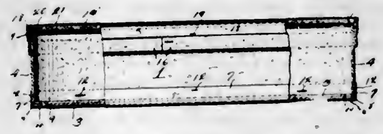
said means, and means for moving the said roller and escapement out of operative relation to the said second mentioned cam.

1,350,906. WHEEL-CULTIVATOR. FRANK A. WOOLF, Wichita, Kans. Filed Sept. 18, 1917. Serial No. 191,932. 1 Claim. (Cl. 97—42.)



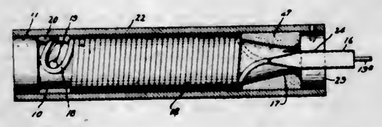
A wheel cultivator comprising spaced-apart members connected at their opposite extremities to constitute a frame; a wheel mounted within the frame between the ends thereof; members disposed at the forward end of the frame, extended upwardly therefrom, then diverging and carried backwardly in the direction of the wheel; handles secured to the free ends of these members; a push-rod adjustably secured, at one end, between the extended members, at a point in advance of the wheel; a tool carrying member disposed on the other end of the frame; and a yoke connecting the handles and frame.

1,350,907. METHOD FOR FORMING CONDUCTING-SEALS FOR INCANDESCENT-LAMP BULBS OR THE LIKE. TEIZO YANAI, Tokyo, Japan, assignor, by direct and mesne assignments, to Nihon Denki Kogyo Kabushiki Kaisha, Tokyo, Japan. Filed Sept. 30, 1916. Serial No. 122,990. 3 Claims. (Cl. 176—36.)



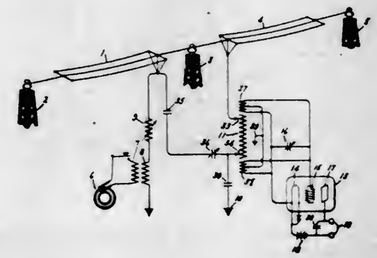
1. A method of hermetically sealing leading in wires for glass vacuum containers which consists in flattening wires of a single metal and then oxidising the wires to form on them a coating of oxid of the metal, embedding the oxidized portions of the wires in the glass after the same has been softened by heating, and then heating the wires to nearly the melting point to form between the wires and the glass a layer of glass containing oxid of the metal of the wires and having a coefficient of thermal expansion between that of the metal and glass.

1,350,908. HOLDER FOR CONTAINERS. HENRY J. YORK, San Francisco, Calif. Filed Feb. 2, 1920. Serial No. 355,789. 4 Claims. (Cl. 65—61.)



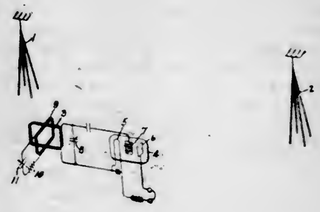
1. A holder for containers and the like comprising spring clips adapted to engage said container and having openings therein for the insertion of said container; a handle connecting said clips adjacent the openings therein whereby a portion of said clips will be under and thereby support said container when the handle is substantially horizontally disposed, and a cover hingedly connected to the upper end of the connecting handle and arranged to cover said container; and a thumb piece formed integral with the cover and extending adjacent the handle whereby said cover and perforation closing means may be raised from the top of said container.

1,350,909. CHEESE-BOX. ERNEST ZEIDLER, Marshfield, Wis. Filed Apr. 9, 1920. Serial No. 372,552. 3 Claims. (Cl. 217—1.)



1. A box having its body portion formed from a single strip of fiber board the ends of which are overlapped and secured together, a wooden bottom having a channel around its edges for the reception of the lower edge of the body member, a recess in the bottom in communication with the channel for the reception of one of the overlapped ends of the body member, a metallic angle member extending around the lower edge of the body member and having one of its flanges engaging the outer wall of the body member and its other flange engaging the under face of the bottom and staples passing through said flanges and the fibrous body member and through the wooden bottom.

1,350,910. ELECTRIC HEATING UNIT. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 20, 1918. Serial No. 241,061. 6 Claims. (Cl. 219—67.)

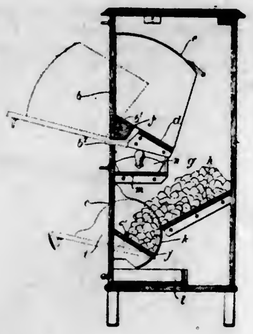


1. An electric heating device comprising a metal core and a sheathed wire heating element surrounding the core, the core and heating element being worked into intimate contact.

1,350,911. WIRELESS SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 20, 1917. Serial No. 143,491. 8 Claims. (Cl. 250—9.)

1. The combination in a wireless signaling system of a receiving antenna, a separate transmitting antenna in proximity thereto, and a receiving coil having one end connected to said receiving antenna and its opposite end connected to a point between two capacities one of which is connected to earth and the other of which is connected to the transmitting antenna.

1,350,912. RADIORECEIVING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 25, 1917. Serial No. 188,109. 3 Claims. (Cl. 250—20.)



1. Means for preventing the effect upon radio receiving apparatus of waves transmitted from a nearby station comprising a receiving coil located in a plane passing through a distant station from which messages are to be received, said coil being connected in a circuit which is resonant to the frequency of the waves to be received and a second coil located at substantially a right angle to the first coil and connected in a circuit which is resonant to the frequency of the waves from the nearby station.

1,350,913. COAL CABINET, SCUTTLE, AND THE LIKE. ARTHUR E. ARNOLD, Llandudno, Wales. Filed Oct. 23, 1919. Serial No. 332,728. 3 Claims. (Cl. 126—283.)

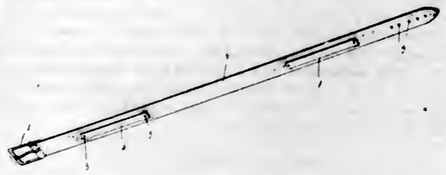
1. A coal cabinet having an upper opening provided with a closure, a main coal receptacle supported on said closure, said cabinet having a lower opening provided with a closure, a coal receiving member supported on,

and movable with, said lower closure, and an inclined baffle arranged in the cabinet to receive material from the

receptacle on the upper closure, and deliver said material to the coal receiving member.

1,350,914. BALLOT. JOHN S. BAKER, Los Angeles, Calif. Filed Mar. 6, 1919. Serial No. 280,904. 5 Claims. (Cl. 283—5.)

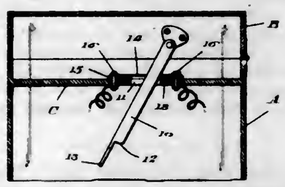
1. An electoral ballot displaying the names of the candidates thereon and having a part of the ballot adjacent the name of each candidate preliminarily weakened in such manner that the voter can readily complete the formation of a hole of proper size in the ballot opposite the name of the candidate for whom he wishes to vote, such preliminarily weakened portions of the ballot being so located that the holes completed by the voter will be properly centered; and the ballot having registering portions whereby any number of such ballots when voted may be properly counted by a suitable machine.



2. An electoral ballot displaying the names of the candidates and having weakened portions adjacent the names of the candidates, to enable a voter to readily make a hole opposite the name of the candidate for whom he desires to vote by pushing a pencil or pointed instrument through the adjacent preliminarily weakened portion of the ballot; the preliminarily weakened portions in the ballot being so located that the holes completed by the voter will be properly centered; and the ballot having registering portions whereby any number of such ballots when voted may be counted by a suitable machine.

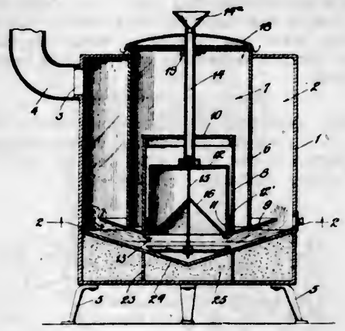
3. An electoral ballot bearing the names of the candidates and having an indicating space adjacent the name of each candidate, the material of the ballot being preliminarily weakened at such spaces so that the voter can readily punch such spaces to form holes in the ballot opposite the names of the candidates for whom he wishes to vote; such preliminarily weakened portions in the ballot being so located that the holes completed by the voter will be properly centered; and the ballot having registering portions to enable any number of such ballots when voted to be properly counted by a suitable machine.

4. An electoral ballot bearing the names of the candidates and having a part of the material of the ballot adjacent the name of each candidate preliminarily weakened by partially perforating the ballot to enable the voter to readily punch such weakened portion of the ballot opposite the name of the candidate for whom he wishes to vote; the preliminarily weakened portions in the ballot being so located that the holes completed by the voter will be properly centered; and the ballot having registering portions to enable any number of such ballots when voted to be properly counted by a suitable machine.



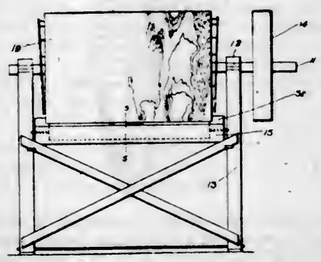
5. An electoral ballot for the purpose specified bearing the names of the candidates and having an indicating space adjacent the name of each candidate; the material in the ballot at such spaces being preliminarily weakened by partially detaching the portions of material of the ballot within such spaces from the ballot to enable the voter to readily punch such portions from the ballot opposite the names of the candidates for whom he wishes to vote; the preliminarily weakened portions of the ballot being so located that the holes completed by the voter will be properly centered; and the ballot having registering portions to enable any number of such ballots when voted to be properly counted by a suitable machone.

1,350,915. BELT. CARL O. BAKKE, Fertile, Minn. Filed Jan. 16, 1917. Serial No. 142,715. 1 Claim. (Cl. 241—8.)



A belt structure, comprising a flexible band, spring strips, each of uniform width throughout its length less than the width of the band and disposed longitudinally of the same at an equal distance from its edges, and means for securing the opposite extremities of each strip on the outer side of said band, said strips being adapted to be arranged adjacent to and embracing the hips of a wearer of the band when passed about the body of said wearer, the band being adapted at the edges thereof on opposite sides of the strips to curl outwardly over the edges of said strips to protect the hips from the edges of said strips.

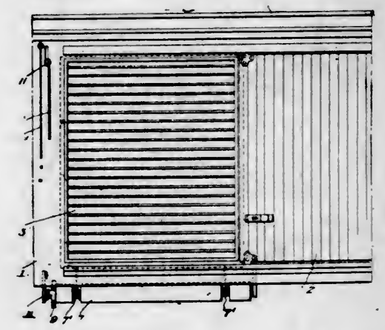
1,350,916. SWITCH. FERDINAND A. BARRETT, Jr., Niagara Falls, N. Y. Filed Aug. 8, 1919. Serial No. 316,128. 2 Claims. (Cl. 240—2.)



2. In a talking machine cabinet including a hinged cover, a stationary top, and an arm pivotally connected with the cover and movable through a guide slot in the stationary top of the cabinet; illuminating means comprising an incandescent bulb, a metal plate secured upon said stationary top and having a slot registering with the slot therein, said plate having at one end a cut-out portion, and a spring contact secured within said cut-out portion and insulated from the plate, said plate and contact being in circuit with said bulb and a source of current, and the free end of said arm being cut away to form a toe and a heel engageable with said contact.

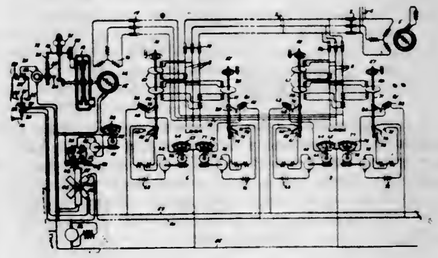
1,350,917. OIL-BURNER. WILLIAM BECKMAN, Sealy, Tex. Filed Jan. 29, 1920. Serial No. 354,861. 10 Claims. (Cl. 158—91.)

1. In an oil burner the combination of a casing, a flue pipe connected therewith, a cylindrical member supported in and spaced from the walls of the casing to provide a heating chamber, an adjustable damper on the top of said cylindrical member, a tubular member within the cylindrical member and spaced therefrom, to form an air heating chamber and formed near its bottom with a series of openings, a flame deflecting plate extending from the bottom of the tubular member into the heating chamber, an inclined bottom spaced from the deflecting plate to form a combustion chamber and flame passage, a drum closed at the top and disposed within and spaced from the tubular member, a conical plate within the drum having the periphery adjacent the bottom edge of the drum, a drip pan below the conical plate and an oil supply pipe extending from and connecting with the drum.



1,350,918. MACHINE FOR GRAINING WOOD. JENS AMANDUS BJORN, Jamestown, N. Y. Filed Sept. 19, 1919. Serial No. 324,881. 10 Claims. (Cl. 101—150.)

1. A wood graining machine comprising a grain-type cylinder mounted for rotation, means for rotating the cylinder, a trough arranged beneath said cylinder, an inking roller journaled in said trough and engaging said cylinder, a normally spaced composition roller capable of movement toward and away from the cylinder, and means, controlled by said cylinder whereby said roller is drawn by the cylinder into close contact with the same for a predetermined interval, and subsequently released to gravitate to normal position.

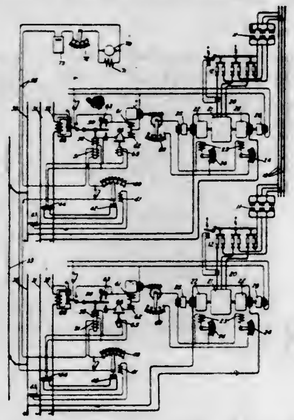


1,350,919. CAR-DOOR. JOHN M. CARLSON, Sandstone, Minn. Filed June 2, 1919. Serial No. 301,210. 1 Claim. (Cl. 20—32.)

A grain car having rollers located adjacent the upper and lower ends of the door opening, said rollers having reduced portions thereon, chains connected with said reduced portions, a flexible door having its ends connected

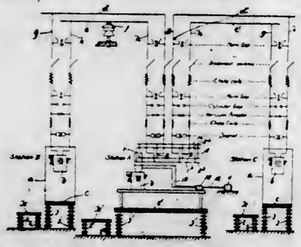
with said chains and means for manually rotating the rollers to wind the door thereon.

1,350,920. ELECTRICAL SYSTEM OF POWER TRANSMISSION. JAMES R. CRAIGHEAD and HENRY R. SUMMERHAYES, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 17, 1919. Serial No. 290,687. 17 Claims. (Cl. 171—119.)



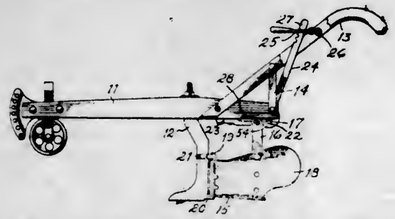
1. In combination, a source of alternating current, a distribution system, comprising a plurality of branch load circuits, supplied therefrom, and means responsive to electrical conditions in said branch circuits arranged to vary its position in accordance with the power factor of the load imposed upon said source by said system.

1,350,921. POWER-LIMITING SYSTEM. JAMES R. CRAIGHEAD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 26, 1920. Serial No. 354,059. 6 Claims. (Cl. 171—312.)



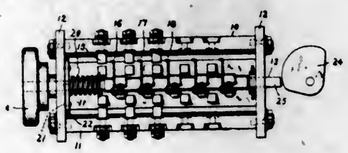
1. In combination, a distribution circuit, a plurality of sources of electric energy adapted to supply power to said circuit and to receive power from said circuit, and a power limiting system comprising means associated with each source and controlled by the total demand on all of

said sources for varying the voltage thereof, and means for rendering the voltage varying means associated with



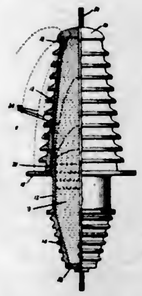
a source in inoperative to decrease the voltage thereof when said source is receiving power from said circuit.

1,350,922. HIGH-TENSION TELEPHONE SYSTEM. FRANK C. DOBLE, Winchester, Mass. Filed July 30, 1919. Serial No. 314,365. 8 Claims. (Cl. 179—1.)



1. A high tension telephone system having all its parts insulated from ground and so designed that no part of the system will break down to ground under a sustained electrical stress less than one thousand volts pressure (root mean square sine wave value) at any frequency; and comprising as such parts a circuit, a telephone instrument and an operator's station.

1,350,923. GARDEN SIDEHILL-PLOW. ZACARIAS DOMINGUEZ, Los Angeles, Calif. Filed Mar. 5, 1918. Serial No. 220,501. 3 Claims. (Cl. 97—27.)

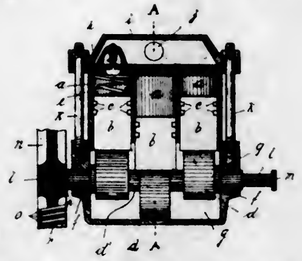


1. The combination with a plow-beam and standard, handles fixed to the plow-beam, and a brace connecting the handles, of a swinging frame pivotally connected to the standard and consisting of a bottom brace, side braces, and a cross sector connecting the side braces and having a series of notches, angularly and rearwardly diverging mold-boards fixed to the bottom and side braces of the frame, a lug fixed to the bottom of the plow-beam, said cross sector sliding between the lug and beam, a lever mounted on the beam and adapted to engage with the notches in the movable cross sector part of the swinging frame, and a latch pivotally connected to the handle-connecting brace and adapted to secure the retaining lever in operative engagement with the cross sector part of the frame.

1,350,924. CONTROL-SWITCH. JOHN EATON, Schnectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1918. Serial No. 246,801. 3 Claims. (Cl. 200—16.)

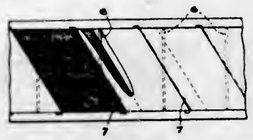
1. A circuit controller comprising a plurality of sets of radially disposed stationary contacts mounted on a support for the same with intervening spaces between the sets of contacts, a shaft having a plurality of contacts arranged longitudinally thereof rotatable to positions adjacent the stationary contacts but normally out of engagement therewith during its movement, and means for forcing said shaft longitudnally from its normal position into engagement with any of the fixed contacts when it reaches a position adjacent thereto.

1,350,925. INSULATION. GIUSEPPE FACCIOLI, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 20, 1917, Serial No. 156,220. Renewed May 12, 1920. Serial No. 380,886. 11 Claims. (Cl. 173—318.)



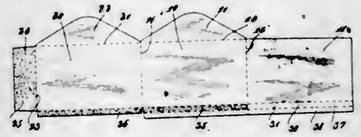
6. The combination with a conductor, a bushing surrounding the same, and a conducting member surrounding the bushing intermediate its ends, of a hollow conducting cylinder to materially reduce the number of electrostatic flux lines terminating on said conductor beyond one end of said bushing, concentric with, electrically connected to and of a greater diameter than said conductor, and adjacent said end of said bushing, the end of said cylinder toward said conducting member being embedded in the material of said bushing, said conductor being provided with a conducting portion beyond said end of said bushing materially enlarging the diameter of said conductor adjacent that end of the bushing.

1,350,926. AIR-PUMP FOR INFLATING PNEUMATIC TIRES. JOSEPH MARIE ETIENNE FRANC, Andancette, France. Filed Aug. 22, 1919. Serial No. 319,273. 2 Claims. (Cl. 230—27.)



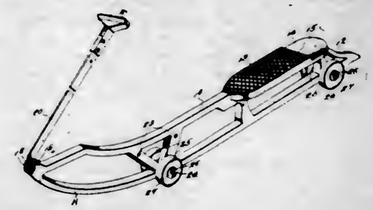
1. An air pump for inflating pneumatic tires comprising a casing, a plurality of cylinders thereon, valves in said

cylinders, pistons slidably mounted therein, a cam shaft, cams on said shaft in operative engagement with the pistons, the said cams being in equal angular relation on the shaft according to the number of cylinders, and spiral springs bearing on the tops of the pistons for keeping them up to the working faces of the cams on the re-



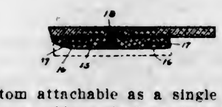
turn strokes of the pump, the cam shaft being made hollow and having slidably mounted therein another shaft, a spur wheel secured on such inner shaft and formed to be held in engagement with a coöperating pinion through its tooth formation, whereby the inner shaft may be moved to disengage such spur wheel at will.

1,350,927. CENTRIFUGAL COMPRESSOR. JOEL GOMBOROW, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,221. 4 Claims. (Cl. 230—11.)



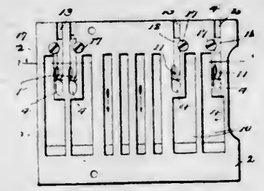
1. In a centrifugal compressor, an impeller having a set of blades and a set of discharge vanes which surround the impeller, said discharge vanes having substantially the same axial width as the blades and extending radially and circumferentially whereby the fluid discharged to them from the blades is given a combined radial and tangential path, said vanes serving to convert velocity into pressure, the discharge edges of the blades and the inlet edges of the vanes being straight and made to extend at different angles to the axis of the shaft whereby they will cross each other gradually.

1,350,928. ENVELOP. WERONA HOMENIUK, Woodlight, Saskatchewan, Canada. Filed Oct. 5, 1918. Serial No. 257,004. 1 Claim. (Cl. 229—75.)



A blank for an envelop having two body portions, folding tabs formed with said portions adapted to fold inwardly and outwardly, one of said tabs having a marginal line of adhesives, long and short end tabs formed with said body portions, folding lines formed longitudinally through said body elements and one of said end tabs whereby portions of the blank may be turned reentrantly along its lower edges so that said body portions are interengaged one with the other, and with the longer of said tabs, and an adhesive along the marginal edges of said folded portions and along the surface of said shorter tab whereby the envelop may be secured in position.

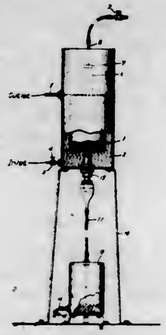
1,350,929. COMBINED SLEIGH AND WHEEL COASTER. JOHN H. MCCARTHY, Lyons, N. Y., assignor to Edward J. Doyle, Rochester, N. Y. Filed Apr. 7, 1919. Serial No. 288,020. 1 Claim. (Cl. 280—8.)



A combined sleigh and wheel coaster comprising a single integral body formed as a runner including an open frame and a foot supporting platform on the upper rear portion thereof, a handle connected with the forward end of said body, the runner portion being provided adjacent its end portions with a pair of holes and the upper portion of the body being provided with a pair of spaced holes, axles disposed through said first named holes, and wheels journaled upon the ends of said axles and disposed upon opposite sides of the runner, said wheels and axles being removable and adapted for disposition within said second named holes whereby to permit the runner to contact with the surface traveled over.

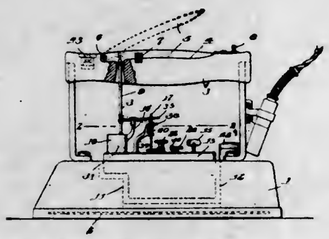
1,350,930. RUBBER SHOE-BOTTOM. WARREN MACPHERSON, Cambridge, Mass. Filed Jan. 26, 1920. Serial No. 353,995. 1 Claim. (Cl. 36—32.)

A shoe bottom attachable as a single part to a shoe, and comprising a rubber sole formed as a single integral part, and including a fore portion, a shank portion, and a heel portion, a layer of rupturable material covering the under surface of the heel portion and having a curved edge portion registering with the curved margin of the heel portion, and a breast edge portion extending across the bottom of the sole, and a rubber heel body, the curved edge portion and breast edge portion of which register respectively with the curved edge portion and the breast edge portion of the said layer, said heel body being provided with means for engaging attaching nails, the said heel portion, layer, and heel body being united by vulcanization, and the heel body being adapted to be stripped from the heel portion to leave on the latter a seat to which another duplicate heel body may be applied.



1,350,931. LOOP-RETAINER FOR SEWING-MACHINES. JAMES R. MOFFATT and RALPH S. KELSO, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1918. Serial No. 250,946. 9 Claims. (Cl. 112—260.)

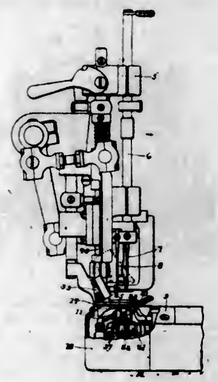
1. The combination of a needle, a feeding mechanism, a threaded looper moving into and out of the needle loop in a line substantially parallel with the line of feed, said



looper having a lateral needle avoiding movement while in the needle loop, a throat plate having a needle opening therein, said throat plate having a thread clearance groove formed in its underface leading forwardly from the needle opening, and a retainer detachably secured to the under surface of the throat plate and having its rear end partially overlapping said groove for retaining the looper thread during the lateral movement of the looper and during the first part of its backward movement so as to insure the needle passing between the looper thread and the body of the looper.

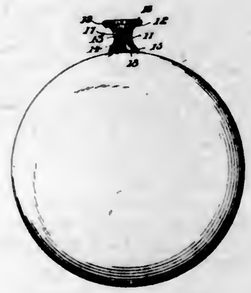
1,350,932. PROCESS OF MAKING SILICON TETRACHLORID. ROY W. MOORE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 18, 1918. Serial No. 217,740. 3 Claims. (Cl. 23—10.)

1. A step in the process of carrying out a reaction between a halogen and a charge containing silicon as a constituent, which consists in controllably withdrawing heat from the reaction zone to maintain the reaction temperature within the range in which a desired silicon compound is formed, and below the point at which undesired halogen compounds of silicon are formed.



1,350,933. ALTERNATED TIME-CONTROLLED MECHANISM FOR IRONS. JOSÉ A. OCA-BALDA, New York, N. Y. Filed Aug. 1, 1919. Serial No. 314,661. 9 Claims. (Cl. 219—25.)

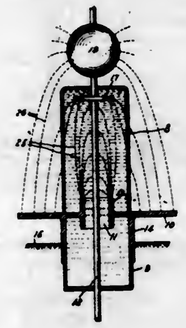
5. The combination with an electric iron, of means for alternately making and breaking the circuit thereof, time controlled mechanism for actuating such means, and means for automatically rendering the mechanism inactive with the circuit broken if the iron is left.



1,350,934. SEWING-MACHINE. LANSING ONDERDONK and AUGUST J. WOHLPART, New York, N. Y., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1916. Serial No. 123,339. 14 Claims. (Cl. 112—200.)

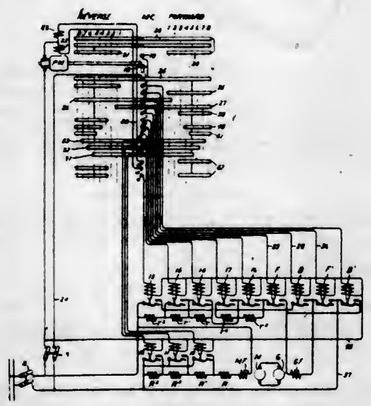
1. A sewing machine including in combination, needles arranged in pairs, one pair being in front of the other, a looper coöperating with the front pair of needles, a looper coöperating with the rear pair of needles, a deflector for the needle thread loops of one pair of needles,

and means for operating said deflector whereby the needle loops engaged thereby are moved to one side of the path of the needles and the needles caused to enter the looper thread loop in advance of the loops of both needles.



1,350,935. TOY BALLOON. FRANK PASTOR, Akron, Ohio, assignor to The Anchor Rubber Company, Inc., Barberton, Ohio, a Corporation of Ohio. Filed June 6, 1917. Serial No. 173,133. 10 Claims. (Cl. 46—37.)

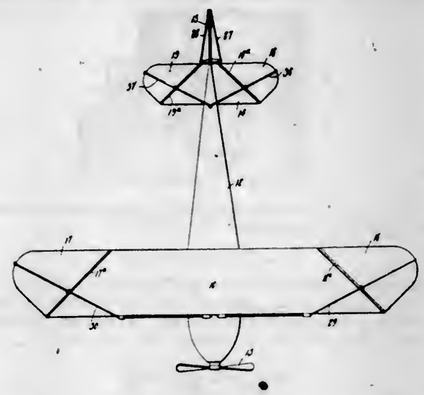
1. A toy balloon including a body portion, a contracted neck portion, and means fastened to the neck portion coöperating therewith and constituting a valve closure for the balloon, the said means including a collar flaring outwardly at each end.



1,350,936. INSULATOR. FRANK W. PEEK, Jr., Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Continuation of application Serial No. 154,934, filed Mar. 15, 1917. This application filed Jan. 2, 1919. Serial No. 269,193. 16 Claims. (Cl. 173—311.)

1. The combination with conducting members at materially different potentials, of intervening masses of dielectric material shaped to have the bounding surfaces of discontinuity obtaining between said masses crossed by electrostatic flux, and an electrostatic flux controlling means electrically connected to one of said members proportioned and located in the said dielectric masses sub-

stantially to avoid regions of local concentration in said flux over said surfaces of discontinuity.



1,350,937. CONTROLLER FOR ELECTRIC MOTORS. CHARLES L. PERAY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,628. 11 Claims. (Cl. 172—179.)

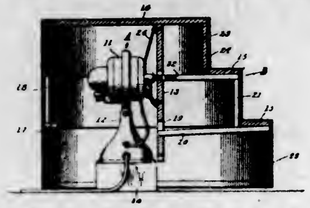
1. The combination with an electric motor, of a main controller therefor having a plurality of positions, a pilot motor for operating the same, a manually operated master controller having positions corresponding with those of the main controller, and means comprising a single movable contact establishing an electrical connection for the pilot motor through the main and master controllers, whereby when the master controller is moved to a predetermined position the main controller is moved by the pilot motor to a corresponding position.

1,350,938. AEROPLANE. MARINUS PETERSEN, Kenmare, N. D. Filed Oct. 21, 1918. Serial No. 259,147. 2 Claims. (Cl. 244—29.)

1. An aeroplane having its sustaining and tail wings provided with ailerons mounted for deflection upon diagonal lines convergent rearwardly of the machine, a rudder mounted for lateral deflection upon a line extending upwardly and rearwardly of the axis of the machine, and

means for effecting adjustment of said ailerons and rudder.

1,350,939. OIL-PUMP. JOHN PETTIT, Taft, Calif. Filed Apr. 13, 1920. Serial No. 373,510. 2 Claims. (Cl. 103—80.)

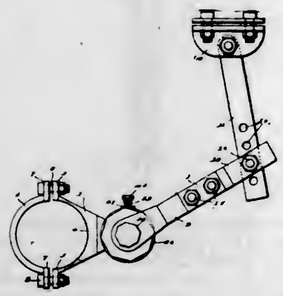


1. A device of the class described including a pump barrel, a standing valve and a movable valve, a supplemental valve bearing on the movable valve, a tubular settling chamber attached to the movable valve and inclosing the supplemental valve, a tubular conductor communicating with the movable valve, a hollow head member connected to the conductor to which a sucker rod is adapted to be attached, a valve within the head and engaging the conductor, and a plurality of tubes depending from the head and discharging into the settling chamber.

1,350,940. DISPLAY-STAND. XOLON O. RAY, Chaffee, Mo. Filed Dec. 5, 1919. Serial No. 342,746. 1 Claim. (Cl. 211—20.)

A display stand including a plurality of spaced superimposed shelves of different diameters, a top wall, a wall depending from the top and having its opposed edges, stepped to support said shelves, means for closing the space between the shelves, arms projecting forwardly from

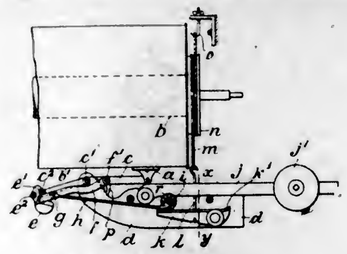
the depending wall, bracing elements carried by said arms and arranged between the shelves, and means asso-



ciated with said depending wall for supporting the stand for oscillatory movement.

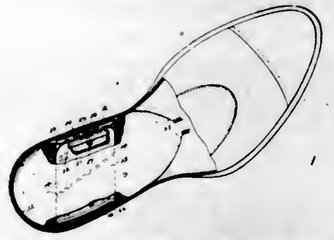
1,350,941. CENTRIFUGAL COMPRESSOR. RICHARD H. RICE, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,161. 5 Claims. (Cl. 230—11.)

1. In a centrifugal compressor, an impeller having a set of blades, and a set of discharge vanes which surround the impeller, said discharge vanes having substantially the same axial width as the blades and extending radially and circumferentially whereby the fluid discharged to them from the blades is guided in a combined radial and tangential path, said discharge vanes serving to convert velocity into pressure, the inlet edges of the discharge vanes and the discharge edges of the impeller blades being so arranged relatively to each other that such edges pass each other gradually.



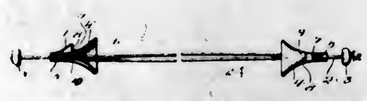
1,350,942. VEHICLE-SPRING. MARION L. RIGGS, Bertha, Minn. Filed Jan. 21, 1919. Serial No. 272,299. 4 Claims. (Cl. 188—89.)

1. A device of the class described, comprising a cylinder containing a fluid, a stationary abutment therein, a shaft in said cylinder, an abutment carried thereby, said abutments having restricted passages therein, a valve controlling the passage in the shaft abutment, a screw-threaded filling plug carried by the cylinder and acting as an adjusting means for the passage in the stationary abutment and arms connected with the shaft and cylinder.



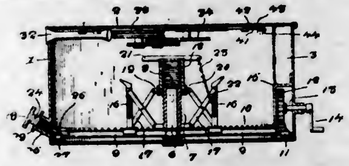
1,350,943. SELF-ACTING WARP-TENSION-REGULATING MOTION FOR LOOMS FOR WEAVING. PETER SCHOLES, Hyde, England. Filed June 8, 1920. Serial No. 387,501. 4 Claims. (Cl. 139—58.)

1. In warp tension regulating mechanism, a feeler device for engaging the warp, a pivoted counterbalance lever, a brake operating lever, a pulley arranged between the said levers and operatively connected with the said feeler



device, and a friction brake for the warp controlled by the said brake operating lever.

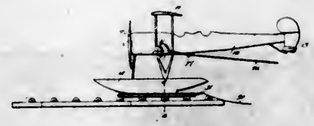
1,350,944. ORTHOPEDIC DEVICE. MELVIN L. SEVERY, Los Angeles, Calif. Filed Aug. 2, 1916. Serial No. 112,675. 15 Claims. (Cl. 128—80.)



1. The combination with a shoe of an upstanding frame rigidly mounted wholly within said shoe at one side and projecting upward from the heel thereof, and a laterally adjustable member carried by the upper end of said frame and adapted to bear against the wearer's foot near the ankle to offer lateral support to the latter.

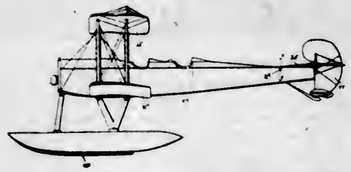
1,350,945. HATPIN. DORSEY M. STOCKDALE, Carmichaels, Pa. Filed Feb. 7, 1919. Serial No. 275,589. 2 Claims. (Cl. 132—25.)

1. In combination with a pair of hat pins, a safety device on each pin for receiving the end of the other pin, said device consisting of a bell-shaped member and means for frictionally holding the device on the pin.



1,350,946. REEL. DORSEY M. STOCKDALE, Ellenboro, W. Va. Filed Apr. 29, 1919. Serial No. 293,379. 2 Claims. (Cl. 242—112.)

1. A reel of the class described comprising a case, a cover therefor, a spindle therein, a hub rotatably mounted on the spindle and having a screwthreaded portion, spokes

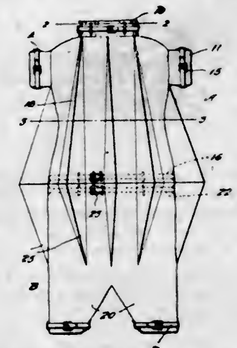


secured to said hub, slotted upright members slidably engaging with said spokes, a sleeve interiorly screw-threaded and engaging the screw-threaded part of the hub, a collar rotatably carried by said sleeve, toggle levers connecting the upright members with said collar and with said hub.

1,350,947. LAUNCHING DEVICE FOR FLYING-MACHINES. MAX STUPAR, Buffalo, N. Y., assignor to Abraham J. Elias, Buffalo, N. Y. Original application filed June 25, 1919, Serial No. 306,613. Divided and this application filed Dec. 10, 1919. Serial No. 343,749. 4 Claims. (Cl. 244—2.)

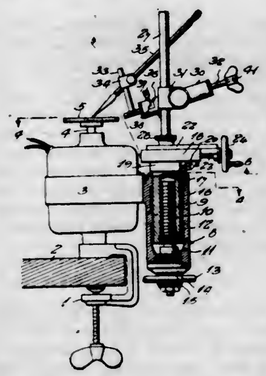
1. A launching device for flying machines comprising a roller carrying runway, a supporting cradle movable on the rollers of the runway and beyond the runway at its extremity, and water rudders carried by said cradle.

1,350,948. DETACHABLE STABILIZING-FIN FOR FLYING-MACHINES. MAX STUPAR, Buffalo, N. Y., assignor to Abraham J. Elias, Buffalo, N. Y. Original application filed June 25, 1919, Serial No. 306,613. Divided and this application filed Dec. 10, 1919. Serial No. 343,751. 5 Claims. (Cl. 244—29.)



5. A flying machine including a fuselage, and a stabilizing fin seated horizontally on the upper rear portion of the fuselage and having detachable connection at the sides of its forward and the center of its rear portion with the fuselage.

1,350,949. RAILWAY-SWITCH-OPERATING MECHANISM. CARL E. TALLY, Kopperl, Tex. Filed Feb. 13, 1920. Serial No. 358,361. 4 Claims. (Cl. 246—306.)



3. A railway switch operating mechanism comprising a plurality of track devices arranged in pairs at the opposite sides of the track and connected with the switch, each device comprising a stationary base, an element mounted upon the base for sliding and tilting movements, means for checking the movements of said element, resilient means for returning the element from a tilted to a vertical position at either end of the base, in combination with means carried by the locomotive for tripping said elements in the order specified.

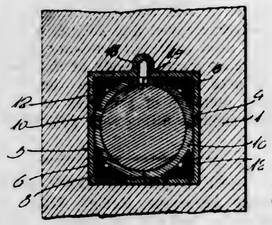
1,350,950. LIFE-SAVING SUIT. JANOS TÁLOS, Akron, Ohio. Filed Apr. 26, 1920. Serial No. 376,704. 2 Claims. (Cl. 9—20.)

1. A garment of the character described constructed from water-proof material and including a body portion, legs, arms, and neck receiving portions, means for contacting such portions about the body of the user, a plurality of spaced pockets extending from the neck portion to within a short distance of the ends of the leg portions, and a buoyant element filling each pocket for the purpose specified.

1,350,951. DENTAL-INSTRUMENT-GRINDING DEVICE. HANS ARTMAIER, Racine, Wis. Filed Apr. 14, 1919. Serial No. 289,779. 6 Claims. (Cl. 51—7.)

1. In an instrument grinding device, a support for attachment to a bench or table, a motor mounted on said support with its shaft disposed vertically, a grinding member carried by the upper end of said shaft, a vertical guide offset laterally from and carried by the motor casing, a slide carried by said guide, means for adjusting said slide vertically, and means mounted on said slide for holding the instrument and adjusting it to the aforesaid grinding member.

1,350,952. CHAIN-CONNECTOR. TRUE M. AVERY, Glens Falls, N. Y., assignor to Arrow-Grip Manufacturing Co., Inc., Glens Falls, N. Y., a Corporation of New York. Original application filed Feb. 10, 1917, Serial No. 147,856. Divided and this application filed Dec. 17, 1918. Serial No. 267,187. 4 Claims. (Cl. 24—241.)

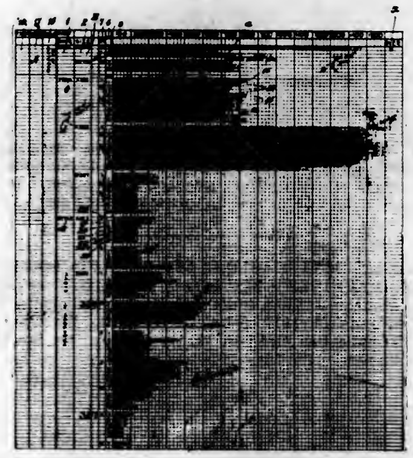


3. A device for securing chains comprising an attachment plate provided with a pair of opposed hooks having their terminals in adjacency whereby to delimit an intervening space which provides a passage common to both links to be secured and a bodily movable keeper including

a pair of spring members normally disposed in said passage to spring outward relatively to one another and to press against the hook terminals, thereby to close the

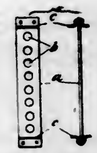
hooks relatively to said passage, said spring members having openings to take over the hook terminals thereby normally to lock the keeper against displacement.

1,350,953. SHAFT-BEARING. ARTHUR THOMAS BALL, Ranger, Tex. Filed Dec. 4, 1919. Serial No. 342,343. 2 Claims. (Cl. 64—55.)



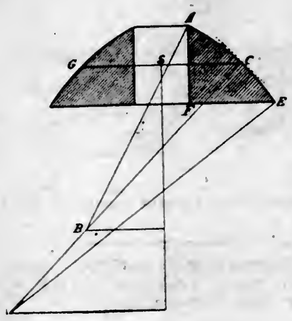
2. A bearing for shafts comprising a rectangular casing provided at one end with stop means, being open at its opposite end, a plurality of substantially triangular bearing blocks fitted into the four corners of the casing and bearing against said stop means, said blocks being provided with a plurality of spaced non-circular apertures, a plurality of arcuate bearing members having flat-face projections thereon adapted to fit into the apertures in the bearing blocks, the inner faces of said members being curved to form a smooth bearing for a shaft, and a closing plate for the casing adapted to engage the opposite ends of the bearing members and blocks to retain them against end-wise movement.

1,350,954. OPTOPHONE. ARCHIBALD BARR and WILLIAM STROUD, Anniesland, Glasgow, Scotland, and EDMUND EDWARD FOURNIER D'ALBE, London, England, assignors to Barr and Stroud, Limited, Glasgow, Scotland. Filed Nov. 26, 1919. Serial No. 340,745. 4 Claims. (Cl. 250—1.)



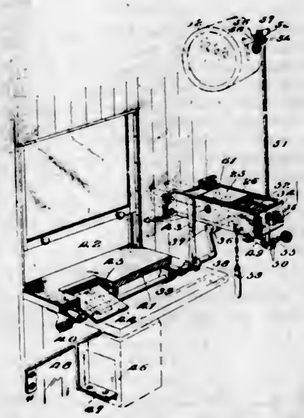
1. An optophone having means by which a series of intermittently luminous beams having different frequencies of intermission are produced, a primary and a secondary sensitive tablet each composed of a substance the electrical conducting properties of which alter under the action of light, means for supporting a printed page, the printed page having light reflecting and comparatively non-reflecting surface portions, means for projecting continuously onto the secondary tablet portions of the light of the whole series of beams, means for projecting onto the surface of the paper intermittently luminous dots of the whole series, the primary tablets being arranged to receive the light reflected from the paper, a source of electricity, two circuits one containing the primary tablet the other the secondary tablet, and a telephone, for the purposes set forth.

1,350,955. MEANS EMPLOYED IN PRODUCTION AND MATERIAL CONTROL SYSTEMS. EVERETT H. BICKLEY, Southbridge, Mass. Filed Jan. 16, 1918. Serial No. 212,061. 13 Claims. (Cl. 283—66.)



1. A chart containing a line designated to represent materials received, another line designated to represent materials removed, another line designated to represent orders received, the lines so distinguished that the difference in length is plainly shown, and suitable symbols at the ends of the lines to indicate the nature of the lines so named, the length of the lines representing quantities by suitable units, and any fraction of a unit being carried in figures at the end of the lines, all of the said lines being parallel and reading in the same direction from a common point.

1,350,956. ALKALINE ACCUMULATOR. ANTOINE MARIUS CAVE, St. Etienne, France. Filed Nov. 7, 1918. Serial No. 261,532. 6 Claims. (Cl. 204—29.)

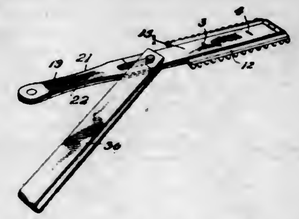


3. An electrode for electric accumulators, comprising in combination a central conducting metal plate having perforations along its length, metallic cloth wrapped around the plate, active material filling the interstices in the cloth, an insulating envelop permeable to gases covering the cloth, bands of vegetable tissue enwrapping the envelop, and means carried by the ends of the plate adapted to hold the envelop in position on the cloth.

1,350,957. CONSTRUCTION OF LENSES FOR LAMPS, PROJECTORS, AND THE LIKE. WILLIAM THOMAS COULSON, Anerley, London, England. Filed Feb. 10, 1919. Serial No. 276,113. 2 Claims. (Cl. 240—106.)

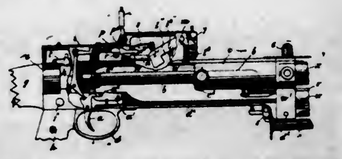
1. A lens comprising two sections each having a co-axial hole therethrough and outer convex faces formed with curves of different radii, said curves having a common tangent at the junction of said sections and a source of light positioned in said co-axial holes.

1,350,958. TOLL-COLLECTING MECHANISM. CLAUDE B. DAVIS, Richmond, Va., assignor of one-half to Marion Allen and one-fourth to Willie Thomas Bragg, Richmond, Va. Filed Nov. 23, 1918. Serial No. 263,864. 7 Claims. (Cl. 133—1.)



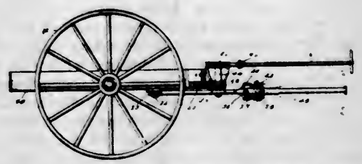
1. The combination with a turnstile of a detent for the turnstile, a dumpable coin tray and a single means for retracting the detent and simultaneously dumping the coin tray.

1,350,959. PROCESS FOR THE EXTRACTION OF LEAD FROM ITS ORES. FRANK EDWARD ELMORE Boxmoor, England. Filed Apr. 11, 1919. Serial No. 289,412. 4 Claims. (Cl. 23—13.)



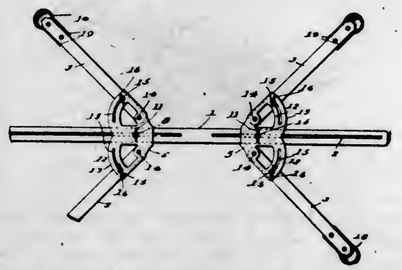
1. The herein described improvement in brine processes for the extraction of lead from its ores consisting in first cooling the used brine to deposit lead salts, further cooling the brine to about 0° C. and converting the lead salts into lead sulfate technically free from chlorid by means of sodium sulfate derived from the brine by the said further cooling.

1,350,960. SAFETY-RAZOR AND BLADE-HOLDER. WILLIAM M. EVANS, Tampa, Fla. Filed Jan. 19, 1920. Serial No. 352,311. 2 Claims. (Cl. 30—12.)



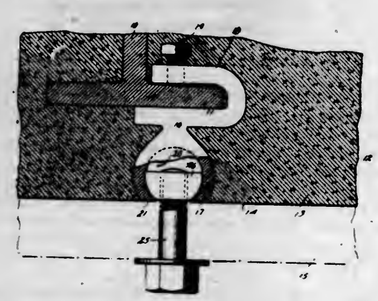
1. A combined razor and blade holder comprising an elongated bar having a central elongated slot therein and spurs struck up at one side of the slot, a short bar hinged to one end of said elongated bar and adapted to swing in a flatwise direction, said short bar having openings therein to receive the outer ends of said spurs, a guard plate having openings to receive the spurs and end notches to reversibly receive the hinged joint between the short and elongated bars, a blade also having openings to receive the spurs and similar end notches, a second short bar pivoted to the opposite end of the elongated bar and swinging in a flatwise direction, and means for securing the inner ends of the two short bars together, substantially as described.

1,350,961. AUTOMATIC FIREARM. MOUBRAY GORE FARQUHAR and ARTHUR HENRY HILL, Birmingham, England. Filed Apr. 15, 1919. Serial No. 290,267. 8 Claims. (Cl. 89—2.)



1. In an automatic fire arm the combination with a body having a sliding breech closing cover arranged thereon and operating the bolt to give it a backward and forward sliding motion, a depending hammer pivoted over the body and mechanism arranged over the body for retaining the said hammer in the cocked position against the action of its spring, said mechanism comprising spring pressed pivoted and sliding elements connected at their rear ends to a pivoted lever the end of one arm of which bears on the trigger lever.

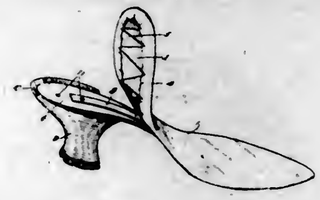
1,350,962. HITCH FOR TWO-WHEEL TRACTORS. JESSE D. FLORY, Camden, Ohio. Filed Feb. 4, 1919. Serial No. 274,903. Renewed June 14, 1920. Serial No. 389,265. 3 Claims. (Cl. 280—33.8.)



1. The combination with a two wheeled tractor, of a coupling bar, a vertically disposed worm mounted for rotation at one end of said bar, a gear rigidly mounted upon the tractor for engagement with the worm and means for pivotally connecting the coupling bar and tractor, whereby the worm and gear will control the vertical position of the opposite end of the coupling bar with respect to the forward portion of said tractor.

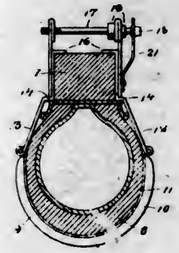
1,350,963. FOLDING DISPLAY-TRUCK. HENRY C. FOWLER, Johnson City, N. Y. Filed May 23, 1919. Serial No. 299,099. 2 Claims. (Cl. 280—35.)

1. In a truck of the character described, a bar longitudinally slotted, an elongated plate of substantially U-shaped formation in cross section mounted upon the bar for sliding adjustment, a bolt carried by the plate and extended through the slot in said bar, a nut associated with the bolt for holding the plate in a given position, wings projecting from the plate at opposite sides thereof, an extension bar pivoted to each wing, whereby said bars may be arranged divergently with respect to the central bar, or in parallelism therewith, a flange formed on each wing, to limit the outward movement of its associated extension bar, means for holding said extension bars fixed relatively to the first mentioned bar, and rollers carried by the outer end of said extension bars.



1,350,964. HANGER-BLOCK. PATRICK A. FAHEL, Bayonne, N. J. Filed Apr. 10, 1920. Serial No. 372,760. 1 Claim. (Cl. 72—105.)

The combination with a flanged beam and plastic material in which the beam is embedded, of a hanger block comprising a socket member and a U-shaped clamp integral therewith, said clamp being adapted to embrace a flange of the beam, a set screw tapped through one leg of the clamp for engagement with the flange and with the axis of the screw in direct alinement with the socket member, said socket member being disposed adjacent to the surface of the plastic material and having a restricted mouth, a nut projectable edgewise inward through said mouth and adapted to be retained within the socket member, and a clamping bolt coöperating with the nut.

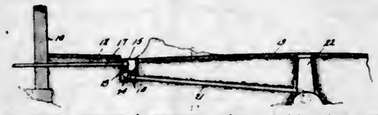


1,350,965. SLIPPER. MARCO GAETO, New York, N. Y. Filed Mar. 6, 1920. Serial No. 363,891. 4 Claims. (Cl. 36—25.)

1. As an article of manufacture, a slipper comprising an insole, a shank secured at its forward end to the under face of the insole, a heel, said shank secured to the heel, said insole secured upon the shank and upon the heel, and an outer sole located under the insole and

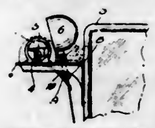
projecting between the forward portion of the heel and the insole.

1,350,966. ANTISKIDDING DEVICE. WILLIAM E. GLOVER, Coin, Iowa. Filed July 12, 1918. Serial No. 244,602. 1 Claim. (Cl. 151—32.)



In a device for the purpose set forth, a headed bolt, a member through which the bolt passes and on which the bolt is revoluble, spaced flanges on the bolt contacting with the opposite faces of the member for sustaining the head of the bolt away from the said member, locking means for the bolt, comprising a slotted spring having an offset end which is secured to the member, the head of the bolt designed to be received in the slot of the spring and the latter being susceptible to a movement in the direction of the member to bring the same out of engagement with the head of the bolt and to permit of the turning of the bolt on the member.

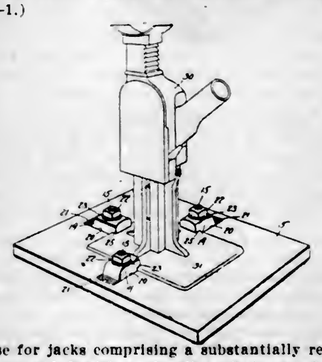
1,350,967. FARM-GATE. DANIEL A. GRAY, Des Moines, Iowa. Filed Apr. 30, 1919. Serial No. 293,646. 2 Claims. (Cl. 39—82.)



1. The combination with a hinge post having hangers, and a gate hingedly mounted at its inner end on the lower hanger; of a fork fixedly carried by the gate near its outer end, a truss rod mounted loosely within the gate body, its inner end projecting beyond the gate and hingedly engaging the upper hanger and its outer end lying normally in said fork and threaded, a nut on the threads adapted to be tightened against the fork and a yoke carried by the fork and adapted to be engaged with the rod beyond the nut.

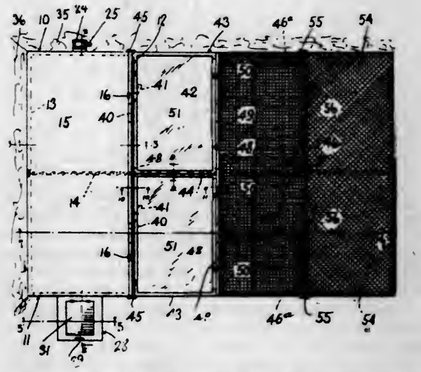
1,350,968. SNOW-REMOVAL AND STEAM-HEATING SYSTEM. WILLIAM F. GUERIN, Brooklyn, N. Y. Filed Mar. 29, 1920. Serial No. 369,583. 1 Claim. (Cl. 237—1.)

In a snow removal system, the combination with a street, a sewer and a source of steam, of a trench formed in the gutter of said street, a steam pipe positioned in said trench, a plurality of covers over said trench adapted to be removed so that snow and ice can be thrown into said trench to be melted by the heat from said steam pipe, an oblique outlet pipe connecting the bottom of said trench with said sewer, and a steam trap on said steam pipe adapted to discharge water of condensation into said trench so that said water will mix with the water from the melted snow and run through said outlet pipe into said sewer.



1,350,969. VEHICLE-SIGNAL. SWAN E. HALLEN, Vancouver, British Columbia, Canada. Filed Dec. 1, 1919. Serial No. 341,632. 5 Claims. (Cl. 116—43.)

1. In a signal device for vehicles, a suitably marked translucent globe mounted on a bracket base, an opaque hood having a radial lever arm pivoted on said bracket base to one side of said globe, a spring attached to said base and engaging said lever arm to maintain said hood over said globe and in contact with said base, means to operate said lever arm and raise and remove said hood from over said globe, fully exposing the same to view from front, back and side, substantially as specified.



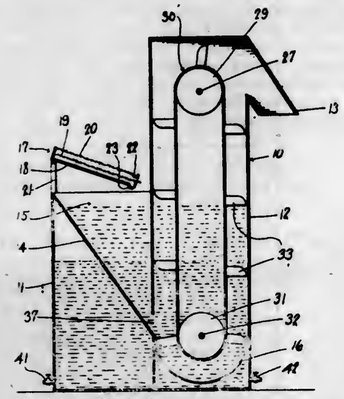
2. In a signal device for vehicles, the combination of a bracket base, a translucent globe or illuminable body suitably marked and mounted on said bracket base, to be readily discernible with internal illumination, means for internally illuminating said body, a hood adapted to cover said body in conjunction with said bracket base, and comprising an inverted cup with a radial arm, said arm being pivoted on said bracket with a free lever end, a spring engaging said free lever end of said arm to maintain said hood in a normally closed relation with said base, and an operating cord attached to said free lever end to raise said hood against the tension of said spring, substantially as specified.

1,350,970. BASE FOR JACKS. ARTHUR EDWARDS HUTCHISON and HARRY KRAH, New York, N. Y. Filed Jan. 22, 1920. Serial No. 353,259. 1 Claim. (Cl. 254—1.)

A base for jacks comprising a substantially rectangular member provided with a plurality of elongated openings, a plurality of serrations surrounding each of the openings on the top face of the base, a lug having a plurality of serrations adapted for interengagement with the serrations surrounding the openings in the base, bolts having squared portions, the square portion of said bolts being adapted to be received within the elongated openings in such a manner as to prevent turning of the bolts, said bolts passing through the lugs, and nuts adapted for engagement with the bolts whereby the lugs are adjustable relative to the base for rigidly securing a jack in position on the top face of said base.

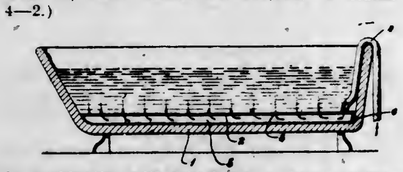
1,350,971. BROODER. WALTER D. INSKO, Anselmo, Nebr. Filed Oct. 17, 1919. Serial No. 331,383. 2 Claims. (Cl. 119—34.)

1. A brooder having a compartmental house provided with a heating apparatus, and sets of communicating pens respectively in communication with the compartments of said house, and comprising hingedly connected side and end walls, of which the former are detachably connected with the walls of the said house, an intermediate wall detachably engaged with guides on the house wall and the end pen wall, and transverse division walls between the pens of each set removably engaged with guides on the side and intermediate walls and carrying hinged covers for the pens adjacent to the brooder house.



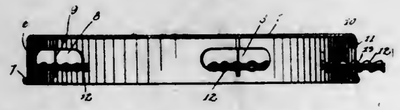
1,350,972. METHOD OF AND APPARATUS FOR POURING MOLTEN METAL. KING IRVIN and ANDREW LENNOX, Washington, D. C. Filed Oct. 8, 1919. Serial No. 329,325. 4 Claims. (Cl. 22—209.)

1. The new and useful method of pouring molten metal, which consists in disposing a mold with one wall thereof at an angle to the vertical, continuously retarding the flow



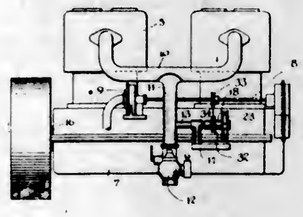
of and coincidently spreading the molten metal laterally while the molten metal is *en route* to the mold, and delivering the molten metal to said inclined wall of the mold.

1,350,973. SEED-SEPARATING DEVICE. WINFIELD S. JEFFRIES, Great Falls, Mont. Filed Dec. 27, 1919. Serial No. 347,663. 4 Claims. (Cl. 130—17.)



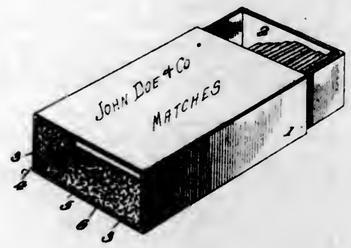
1. A device of the character described comprising a casing including a housing, a tank and a compartment located between the tank and the housing and communicating with the latter at its lower end, means mounted above said compartment for feeding into said compartment grain to be separated, a conveyer within said housing operating to remove therefrom grain sinking through a liquid in the casing, means for driving said conveyer, means driven by said conveyer driving means for operating said grain feeding means, an outlet pipe leading from said compartment, a pipe leading from said outlet pipe into said tank, means driven by said feeding means for circulating the liquid through said pipes, and screening means interposed at the juncture of said second named pipe with said first named pipe.

1,350,974. MEANS FOR AGITATING BATH-WATER. REYNOLD EUGENE KOLSHORN, Red Wing, Minn. Filed Aug. 12, 1919. Serial No. 317,014. 1 Claim. (Cl. 4—2.)



In combination with a bath tub, a casing resting on the bottom thereof and having its top perforated, baffle plates in said casing, means for introducing heated air into said casing and a door at one end of the casing.

1,350,975. TAMBOURINE. ISIDOR LEVY, New York, N. Y. Filed Apr. 16, 1920. Serial No. 374,366. 3 Claims. (Cl. 84—418.)



3. A tambourine comprising a body portion formed of sheet metal having an integral annular flange defining its marginal edge and provided with a plurality of cut-out portions, rigid rods rigidly secured to the flange in the cut-out portions, and a plurality of sound-producing disks reciprocatively mounted in the cut-out portions on said rigid rods.

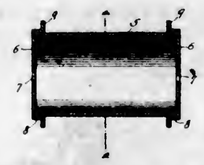
1,350,976. AUTOMATIC FUEL-MIXTURE REGULATOR. ALVIN ALBERT LOETSCHER, Billings, Mont., assignor of one-half to George Georgilas, Billings, Mont. Filed Mar. 24, 1920. Serial No. 368,411. 7 Claims. (Cl. 123—124.)

1. In a device of the character described, an internal combustion engine, a fuel supply thereto including an intake manifold, an auxiliary air inlet pipe to said manifold having an inlet port, a sleeve rotatably mounted on said inlet pipe and having an annular recess on its inner periphery for communication with the inlet port of said inlet pipe, a disk integral with said sleeve and provided with radial openings communicating with said annular recesses and with the atmosphere and having spaced annular flanges on its periphery, a valve coöperating with the outer end of said radial opening having a curved valve stem pivoted to the flanges of the disk, means for rotating said sleeve including a pulley secured thereto and a pulley driven from the crank shaft of the engine, a retractile spring for maintaining said valve closed at low speed and permitting said valve to open at high speed, and means for adjusting the tension of said retractile spring including a lug carried by the disk, a radial arm carried by the valve and an adjusting nut and screw carried by said radial arm.

1,350,977. MATCH-BOX. MICHAEL D. MALONEY, Hadlock, Wash. Filed July 10, 1919. Serial No. 309,869. 4 Claims. (Cl. 206—36.)

1. In a match box, a main imperforate casing open at its ends and having one of its walls provided on its inner side with abrasive material, and a slidable tray fitting in the main casing and normally covering and protecting the abrasive material, said abrasive material engaging the tray for preventing accidental opening of the same.

1,350,978. CLOTHESPROP. JONAS J. MECKLING, Jr., Pittsburgh, Pa. Filed Nov. 13, 1919. Serial No. 337,671. 1 Claim. (Cl. 68—12.)



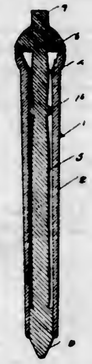
A clothes line holder comprising a bar perforated at its end, a resilient wire bent at the end to form eyes in

alinement with each other and medially bent into a pair of clip coils with spring coils between said clip coils

and said eyes, said bar fitting between said eyes, and a bolt passing through said eyes and perforations.

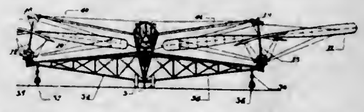
1,350,979. SPOOL. ARTHUR HENRY SCHLOERB, New York, N. Y. Filed May 29, 1919. Serial No. 300,561. 1 Claim. (Cl. 242—119.)

An article of manufacture such as a thread core or spool made of paper, comprising a paper tube open at each end, a paper cap anchored on each end of the tube, a rim integrally formed with each cap made to engage and bind the end of the paper tube, and a rim turned up to form a flange providing a thread-retaining core.



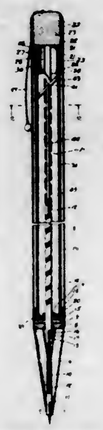
1,350,980. PURSE. WILLIAM STONE, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,683. 1 Claim. Cl. 150—37.)

A bag comprising a body, a frame connected with said body formed in two parts hinged together, one of said parts having an aperture therein, an integral flange extending from said part adjacent said aperture, said flange being formed with a turned up edge, a socket member secured to the part having said aperture, said socket member having the open end facing said aperture, and means in the socket for urging the coins toward said turned up section of said flange.



1,350,981. RECTAL TUBE. JACOB K. WILKENS, Muscatine, Iowa. Filed Mar. 28, 1919. Serial No. 285,754. 1 Claim. (Cl. 128—263.)

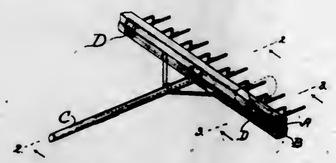
A medicament applicator comprising a tubular member having an exterior conical surface and an interior cylindrical surface, said member being provided at its larger end with a diametrically enlarged funnel shaped flange, a rod provided at one end with an enlarged cone shaped head adapted to fit snugly in the bore of the tubular member, the diameter of the body portion of the rod being less than the diameter of the bore of the tubular member, said rod being provided at a point between its ends with an annular rib adapted to fit snugly within the bore of the tubular member, said rod being provided at that



end opposite the end at which the conical head is located with an enlarged annular flange adapted to engage over the edge of the funnel shaped flange which is provided at the end of the tubular member.

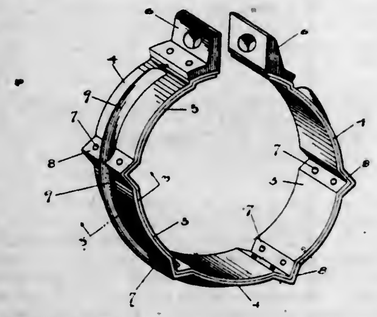
1,350,982. FLYING-MACHINE WITH REVOLVING WINGS. ALÉXIS BEURRIER, EDOUARD BIGOURDAN, and LOUIS LACOIN, Paris, France. Filed Mar. 24, 1917. Serial No. 157,236. 3 Claims. (Cl. 244—19.)

1. The combination with a flying machine having revolving wings in the form of screw propellers mounted on separate axes, of a controlling apparatus comprising a member which is non-rotatable relatively to the propeller shaft but capable of inclination relatively to said shaft and capable of movement parallel thereto, a lever one end of which controls the inclination of the vane and rotates therewith engaging in said member.



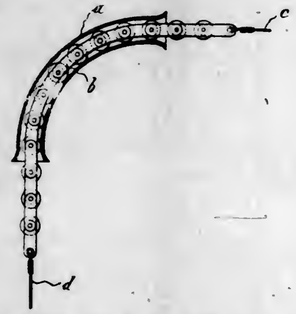
1,350,983. PENCIL. HORACE LYMAN BLACKMAN, Janesville, Wis. Filed Sept. 5, 1919. Serial No. 321,884. 8 Claims. (Cl. 120—18.)

1. A pencil comprising a barrel having a tapered end, a lead-holder rigidly secured to said tapered end, a sleeve



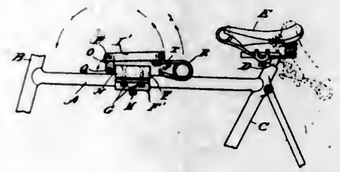
rotatably mounted in said barrel, and a second sleeve carried by the first-mentioned sleeve, said second-mentioned sleeve having an elongated cross sectional form to provide a lead-retaining space between itself and the first-mentioned sleeve.

1,350,984. CAN-HANDLING DEVICE. MARTIN R. BLANK and LOUIS F. SITKIEWITZ, Thiensville, Wis. Filed Mar. 22, 1920. Serial No. 367,647. 13 Claims. (Cl. 294—87.)



1. A can lifting device provided with a row of pins designed for insertion in the open ends of a plurality of cans, fingers corresponding in number with the pins, and means for engaging the fingers with the exterior of the cans.

1,350,985. BRAKE-BAND. JOHN P. BOND, Portland, Oreg. Filed June 16, 1919. Serial No. 304,722. 1 Claim. (Cl. 188—259.)



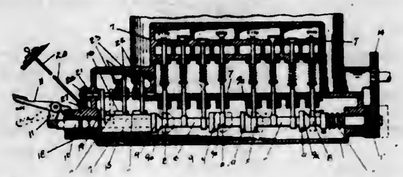
A brake band; transversely indented portions in said band; a longitudinally indented portion in said band connecting said transversely indented portions; a flexible lining; and rivets adapted to secure portions of said lining within said transversely disposed indented portions.

1,350,986. ARRANGEMENT OF FLEXIBLE MEMBERS. RENÉ CAUDRON, Issy-les-Moulineaux, France. Filed Apr. 30, 1919. Serial No. 293,780. 2 Claims. (Cl. 64—30.)

1. In a flexible motion transmitting mechanism the combination of a rigid curved tube, a link chain passing through said tube for joining two sections of a flexible control member, and rollers mounted on the link pins of said chain and protruding beyond the sides of the chain so as to prevent the links of the chain from coming into frictional contact with said tube.

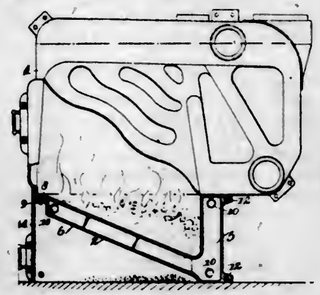
1,350,987. CHILD'S BICYCLE-SEAT. VERNER A. CHERRY, Granite City, Ill. Filed Nov. 21, 1919. Serial No. 339,763. 6 Claims. (Cl. 208—24.)

1. A device of the character described comprising a supporting member, a horizontal seat in two parts, independent parallel pivots for the adjacent portions of each part for vertical adjustment of said seat, strap connections for said pivots, and a hinge connection between one of said straps and the supporting member.



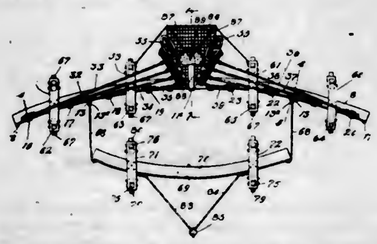
1,350,988. FEED-WATER-SUPPLY APPARATUS FOR STEAM-GENERATORS. THOMAS CLARKSON, Chelmsford, England. Filed Sept. 4, 1918. Serial No. 252,620. 4 Claims. (Cl. 103—99.)

1. In apparatus for regulating the feed water supply of steam generators the combination of a steam generator, a feed water pump, a rockshaft extending through the wall of the pump casing adjacent to the suction valve of the pump, a lever mounted on the rockshaft within the pump casing and adapted to lift the suction valve off its seat when the shaft is rocked, mechanism to which movement is imparted by variations in the level of the water in the steam generator, means by which the movements of this mechanism are communicated to and rock the shaft, mechanism by means of which axial movement is imparted intermittently to the rockshaft in one direction, and a spring operative to move the rockshaft in the opposite direction as set forth.



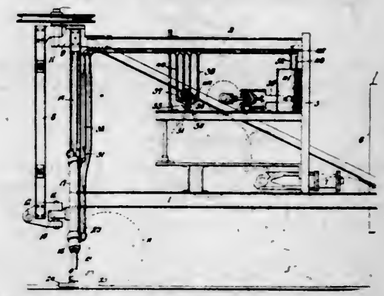
1,350,989. LOCK. ALLEN E. COX, Portland, Oreg., assignor of one-fourth to Joseph C. Allen and one-fourth to Ross C. Evans, Portland, Oreg. Filed Apr. 10, 1919. Serial No. 289,145. 5 Claims. (Cl. 251—6.)

1. In an internal combustion motor, exhaust valves; a cam shaft; exhaust valve cams upon said shaft; cams upan said shaft adjacent said exhaust valve cams; means to move said shaft longitudinally to bring said latter cams into coaction with said exhaust valves for the purpose of simultaneously opening the same and holding them open during rotation of said shaft; a nonrotatable sleeve within which said shaft is rotatably mounted; a notched



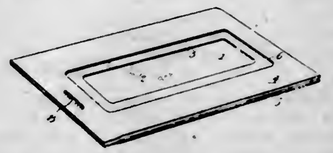
spline upon said sleeve; a shaft mounted adjacent and parallel to said sleeve; notched disks freely mounted upon said latter shaft; means to rotate said latter shaft; and means mounted upon said latter shaft to rotate said disks independently therefrom.

1,350,990. FURNACE-GRATE. MADISON THENTON DAVIS, Jr., Charleston, W. Va., assignor to Kanawha Manufacturing Company, Charleston, W. Va., a Corporation of West Virginia. Filed Dec. 27, 1918. Serial No. 268,519. 1 Claim. (Cl. 122—232.)



In a furnace, a grate consisting of hollow end sections with depressions to form flanges, a front plate secured to said flanges and covering the ash pit, a plurality of intermediate sections consisting of vertical hollow rear branches and forwardly and upwardly inclined bottom branches, said bottom branches having depressions on one side to form ash openings when the sections are fitted together, nipples securing the various sections together and affording water communication therebetween, a foot formed on the upper end of each bottom section, and stay bolts passing through portions of all of the sections, one of the stay bolts passing beneath the feet and offering additional support.

1,350,991. ROAD-SCRAPER. CHARLES M. DICUS, Mill Spring, N. C. Filed May 6, 1919. Serial No. 295,048. 6 Claims. (Cl. 37—5.)

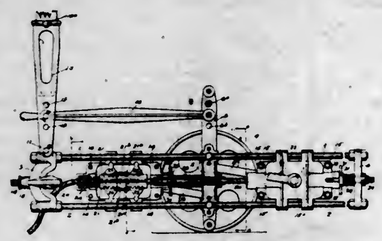


1. A road scraper comprising a supporting frame, a plurality of scraper blades mounted upon said supporting frame and disposed end to end, a rack connected with each scraper blade and extending upwardly therefrom, a pinion for each rack, a number of shafts each carrying one of said pinions, said shafts leading toward an approximate central position, and mechanism connected with all of said shafts to enable the operator located in said position to actuate all of said shafts simultaneously.

1,350,992. MEANS FOR LEVELING AND STAYING EXCAVATING-MACHINES. ROBERT M. DOWNIE, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1919. Serial No. 275,570. 15 Claims. (Cl. 212—145.)

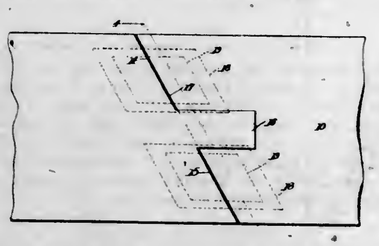
1. In an excavating machine, means for righting the machine when tipped sidewise comprising stay devices on opposite sides of the machine each with hydraulic means simultaneously active to both stay devices to move them into engagement with the surface upon which the machine is resting, and means for causing a compensating distribution of pressure in the hydraulic means in opposition to the sidewise inclination of the machine.

1,350,993. ADDRESS-STENCIL. GUY J. EVANS, Buffalo, N. Y. Filed Oct. 18, 1915, Serial No. 56,394. Renewed Feb. 27, 1920. Serial No. 361,724. 1 Claim. (Cl. 101—127.)



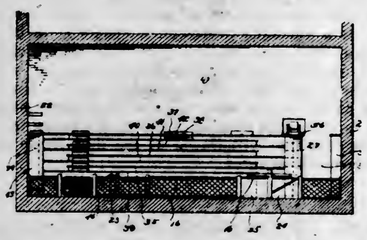
The combination, with a stencil sheet or blank adapted to be stencilized having a comparatively thin surrounding frame of a flexibility sufficient to enable it to be easily shaped to the curvature of a typewriter platen roll, of a second, rectangular, double-thickness frame of stiff material having a face opening substantially corresponding to the outline of the inner margin of the first mentioned frame, and an edge opening or slit large enough to permit the insertion and withdrawal of the first frame and attached stencilized sheet.

1,350,994. STUMP-PULLER. JOHN F. GORMAN, Seattle, Wash. Filed Dec. 29, 1916. Serial No. 139,663. 13 Claims. (Cl. 254—76.)



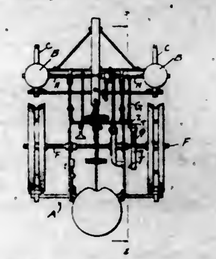
1. In a device of the character referred to, in combination, a rigid frame structure having spaced parallel guides thereon, a pair of gripping elements movable thereon, an operating lever pivoted on said rigid frame structure therebetween and connected therewith to move said elements toward and from each other on said frame structure, gripping mechanisms in each of said gripping ele-

ments movable toward and from each other, and adapted to grip the opposite sides of a pulling element extending from one gripping element to the other, and means for



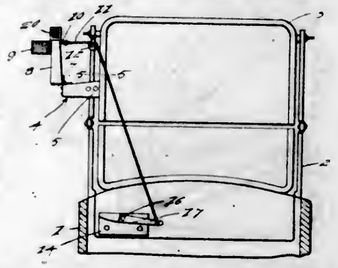
automatically moving said gripping mechanisms into and out of gripping action as said gripping elements are moved in opposite directions on said main frame.

1,350,995. VEHICLE-TIRE. HANS E. GRABAU, Long Island City, N. Y., assignor to A. Charles Schwartz, New York, N. Y. Filed Oct. 10, 1916. Serial No. 124,889. 10 Claims (Cl. 152—13.)



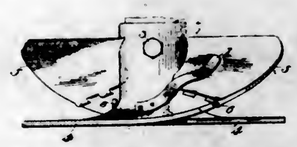
1. A vehicle tire including a strip of belt fabric extending circumferentially, means for connecting the ends of said strip, including a tongue on one end overlapped on the other end, from the base of the tongue to the edge of the strip being cut on the bias, and a cover strip connecting the ends of the joint and arranged on the interior of the belt strip on each side of the tongue and of less width than the portion cut on the bias.

1,350,996. SELF-SERVING STORE. HENRY C. HARVEY, Huntington, W. Va. Filed Oct. 16, 1918. Serial No. 258,346. 7 Claims. (Cl. 211—8.)



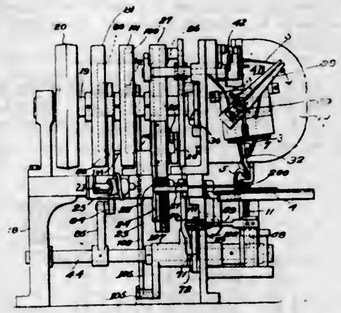
1. A merchandising apparatus having a series of parallel merchandise exhibitors staggered laterally of the series, the successive exhibitors increasing in height with a resultant possible view of the upper portions of all of them throughout their lengths, from a common point in a direction at right angles to the exhibitors, whereby to display from such common point the characters of goods contained by the exhibitors.

1,350,997. TAPPET-WHEEL FOR PLANTERS. CLINTON LEROY HEATH, Leslie, Mo. Filed Nov. 24, 1919. Serial No. 340,108. 2 Claims. (Cl. 74—1.)



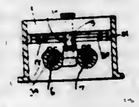
1. A tappet wheel for planters comprising an inner and outer rim co-axially mounted with one of said rims fast to the axle of the planter and adapted to rotate therewith, lever-operated means for connecting and disconnecting said rim with the other of said rims in driving relation, and axially projecting tappets on the second rim having disks thereon overlying the sides of said first rim to prevent lateral displacement of said rims relative to one another.

1,350,998. AUTOMOBILE-SIGNAL. CHARLES J. HUGHES, Summerville, S. C. Filed Feb. 28, 1917. Serial No. 151,491. 1 Claim. (Cl. 116—54.)



An automobile signal comprising an arm of substantially rectangular shape in cross section and gradually tapering from one end in the direction of its other end and having its largest end secured to an automobile, said arm including movable and non-movable sections and said movable section being of a greater length than the non-movable section, a hinge secured to the upper faces of said sections so that said sections may have end abutting engagement with each other when in one position and to allow said movable section to be disposed vertically and at right angles to the non-movable section when in another position, a signal secured to the movable section, and an operating means connected to the movable section.

1,350,999. PACKING-AUGER. OLTRON R. HYLAND, Astoria, Oreg. Filed May 29, 1919. Serial No. 300,680. 1 Claim. (Cl. 100—56.)



A packing auger comprising in combination with the hub and the packing vanes, of a movable portion or gate hinged to the upper end of each vane and adapted to close down in lapping relation upon the other vane to close the space between the vanes, each movable portion or gate having its free end up-curved to lie out of engagement with the other vane when the gate is closed to be engaged by the material to be packed to lift the gate, and a spring secured to each vane and engaging the adjacent gate or movable portion to limit the upward movement thereof to a position where such gate or movable portion is in substantial alinement with the vane.

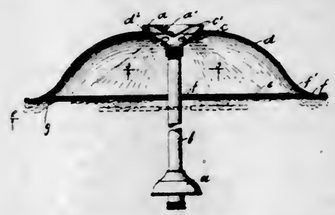
1,351,000. TAG-STRINGING MACHINE. LAWRENCE A. MCGRATH, Winthrop, Mass., assignor of four-sixteenths to Michael F. Cunningham, Randolph, Mass., and two-sixteenths to William H. Dennehy, Brockton, Mass. Filed Dec. 6, 1918. Serial No. 265,605. 27 Claims. (Cl. 93—91.)

2. In a tag-stringing machine, the combination with means to insert a loop of string through the eye of a tag and around the end thereof, a loop retainer to engage said loop, a pull-down device to act on the string between the tag and the loop retainer and draw an added length of string through the eye of the tag, and means to draw the ends of the string through the loop thereof.

1,351,001. TRANSMISSION-LOCK FOR AUTOMOBILES. JAMES MALCOLM, Holyoke, Mass. Filed Jan. 16, 1919. Serial No. 271,549. 2 Claims. (Cl. 70—126.)

1. The combination with a transmission gear shaft including an operating rod, a vertical locking rod adapted to lock said operating rod against movement, said vertical rod being provided with a notch, a housing inclosing said vertical rod, a case detachably fitted in said housing, a locking mechanism in said case having a lug adapted to enter the notch of the vertical rod, and a bar carried by said case and shiftable by said mechanism to lock said case in said housing when the bolt is in locking engagement with said vertical rod.

1,351,002. PERFORATING-RULE. HENRY S. MILLER, Washington, D. C. Filed Mar. 22, 1919. Serial No. 284,458. 2 Claims. (Cl. 164—98.)

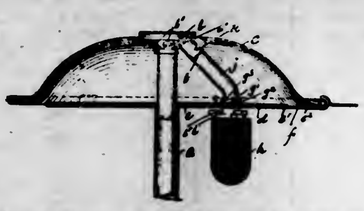


1. A device of the type described including a perforating rule provided with depending posts having laterally extending studs, said posts and studs being adapted to engage a printing plate-holder base, and slots therein, respectively.

1,351,003. WELL-DRILLING BIT FOR OIL, WATER, OR GAS. JEFFERSON D. PACE, Shreveport, La., assignor to Acme Oil & Drill Co., Inc., Shreveport, La., a Corporation of Louisiana. Filed July 19, 1919. Serial No. 312,024. 4 Claims. (Cl. 255—72.)

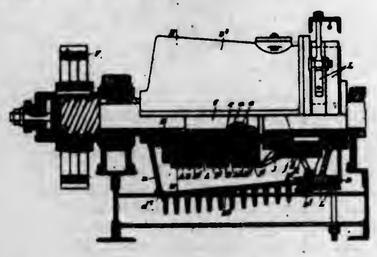
1. In a well drilling tool, a hollow drill rod, a coupling sleeve screwed upon the lower end of the drill rod, a block received within and screwed to the sleeve but spaced from the end of the drill rod, said block having a flared extension at its lower end, said extension having a circumferential series of slots, bits held upon the tool, said bits having beveled edges conforming to the flare of the extension, lateral extensions on each bit and adapted to fit said slots for holding the bits against longitudinal movement, said coupling sleeve being internally beveled to coöperate with the beveled edges of the bits to hold the bits in clamped position with their lateral extensions received within the slots.

1,351,004. GAS-HEATER. JACOB I. ROBIN, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,078. 13 Claims. (Cl. 126—248.)



1. In a gas heater, the combination with a bunsen, of a manifold burner having downwardly directed jet openings, a bell, and a perforated surface extending substantially through the entire area of the mouth of said bell and adapted to intersect the gas currents, so as to cause complete combustion of the gas mixture and produce thereby blue flames on the outer face of said perforated surface.

1,351,005. GAS-HEATER. JACOB I. ROBIN, New York, N. Y. Filed Jan. 17, 1920. Serial No. 352,112. 4 Claims. (Cl. 126—248.)



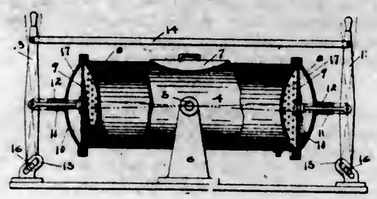
1. A gas heater comprising a manifold burner tube, a heat bell, an adjustable perforated bottom closing the mouth of said bell, a tubular member extending from and secured to said bottom and adapted by the adjustment of the latter to be brought in register with any one of

the burner openings of said manifold burner and serving to support an incandescent mantle so that a part of the

gas mixture issuing from the manifold will flow into said mantle to produce an incandescent light.

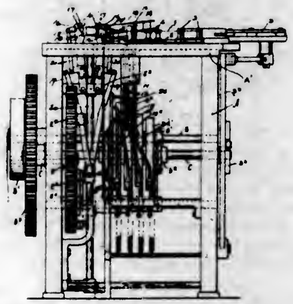
1,351,006. MULTIPLE-DISK BRAKE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Sept. 10, 1918. Serial No. 253,458. 6 Claims. (Cl. 188—72.)

1. In a multiple disk brake, a shaft, a series of disks operatively connected therewith, a second series of disks alternating with the disks of said first series, interlocking peripheral projections on the disks of said second series, and a relatively stationary casing for said disks separate therefrom.



1,351,007. DISPLAY-STAND. SAMUEL TUTTLE SHEPHARD, Albany, N. Y. Filed Feb. 19, 1919. Serial No. 277,937. 4 Claims. (Cl. 211—24.)

1. A display stand for holding canes, umbrellas or like articles, comprising a base member provided with a vertically disposed recess, flexible thin, flat clamping members mounted in the bottom wall of the recess and extending upwardly above the open end of the same and there flared outwardly to form an entrance opening between the same, means for constraining the members toward each other, and a plurality of counterbores of diminishing diameters communicating with the bottom of the recess for receiving the ends of said articles.

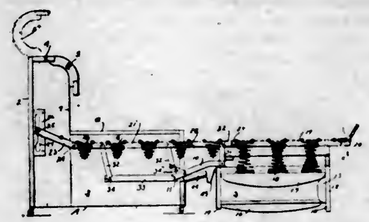


1,351,008. WASHING-MACHINE. WILLIAM M. SIMPSON, Portland, Oreg., assignor of one-half to Woo Lai Sun, Portland, Oreg. Filed May 27, 1919. Serial No. 300,217. 2 Claims. (Cl. 141—9.)

1. In a washing machine: a container; perforated diaphragms at each end of said container; housings upon each end of said container outside said perforated diaphragms; reciprocating shafts mounted within said housings; pumping means upon the inner ends of said shafts;

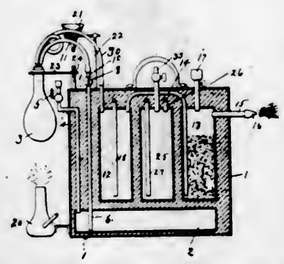
levers connected to the outer ends of said shafts; and means whereby the operation of said levers will oscillate said container.

1,351,009. AUTOMATIC MACHINE FOR MAKING FRAMES FOR WREATHS. CHARLES SMITH, Providence, R. I. Filed Apr. 15, 1919. Serial No. 290,342. 7 Claims. (Cl. 140—71.)



5. In a machine for making wreaths in which a plurality of wires are fed through the machine to form a skeleton frame body, the combination therewith of means for feeding a cross wire at right angles substantially to and below said first named wires, means for cutting from the free end of said cross wire successively pieces of predetermined length; vertically reciprocating laterally separable V-shaped jaws, a vertically reciprocating V-shaped die operating between said jaws, a vertically reciprocating spreader alined with said die and operating between said jaws and in opposition to said die, vertically reciprocating members positioned one at the side of each jaw and parallel therewith and means for actuating the whole to thereby bend said wire pieces around the wires of the frame body into cross braces for the latter.

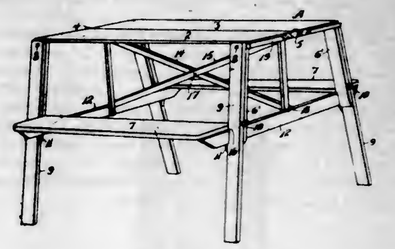
1,351,010. RIPPING-NEEDLE. MARY V. BELL, Oakland, Calif. Filed Oct. 13, 1919. Serial No. 330,421. 1 Claim. (Cl. 164—17.5.)



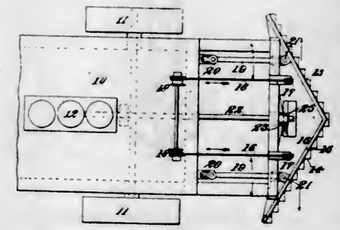
A seam ripping needle for sewing machines having a shank, a head on one end of the shank for attachment to the reciprocating member of a sewing machine, and a single pointed continuous cutting edge on the other end of the shank, said cutting edge being disposed at an angle to the longitudinal axis of the needle and formed to cut the thread only upon downward movement of the reciprocating member and to sever the parts of the thread lying on the surfaces of the material.

1,351,011. DAVENPORT-BED. MARK L. BRILLIANT, San Francisco, Calif., assignor of one-half to Charles E. Brinkman, San Francisco, Calif. Filed Aug. 5, 1918. Serial No. 248,392. 5 Claims. (Cl. 5—51.)

1. A davenport comprising a fixed main frame, a seat section on said frame, a pair of swinging arms between which said seat section is pivotally mounted on the main frame, a mattress frame secured on the lower side of said seat, an intermediate frame connected with one end thereof, an inner frame connected to the intermediate frame, means actuated by unfolding of the seat section for raising the intermediate and the inner frame into alinement with the first frame secured to the seat, a head board pivotally connected to the inner end of the inner frame, and means guidingly engaging the outer end of the head board to allow same to slide vertically, said means being formed to engage said outer end of the head board and to support same at an incline upon the mattress frame reaching a horizontal position.



1,351,012. ATOMIZER. ANDERSON MANSFIELD HOLMES, Baltimore, Md., assignor, by direct and mesne assignments, of fifteen one-hundredths to Marie Smith, fifteen one-hundredths to Annie L. Fisk, nineteen one-hundredths to Oscar I. Woodley, eighteen one-hundredths to William F. Metcalf, and thirty-three one-hundredths to Edward L. Torsch. Filed Aug. 27, 1919. Serial No. 320,109. 3 Claims. (Cl. 128—192.)



1. An atomizer comprising a boiler, a condensing chamber having communication with said boiler, a pipe within said condensing chamber having one end terminating near the bottom and the other end projecting through the wall of said condensing chamber near the top thereof, a second condensing chamber having communication with the first-named condensing chamber, and an outlet for said second condensing chamber and having a nozzle secured thereto.

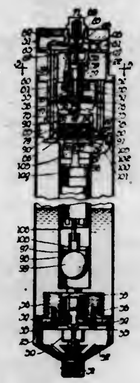
1,351,013. FOLDING FURNITURE. GEORGE R. STINE, Los Angeles, Calif. Filed Oct. 13, 1919. Serial No. 330,443. 8 Claims. (Cl. 45—116.)

3. A combination folding table and seats comprising a pair of table top sections, a pair of hinges disposed one at each end of said sections and centrally connecting the same, a pair of hangers hingedly secured to each table top section and disposed at each end thereof, said hangers being foldable in under the table top sections, a seat pivotally mounted between each pair of hangers, and a leg pivotally attached at its upper end to each haanger.

1,351,014. METHOD AND APPARATUS FOR TRIMMING IRRIGATION AND DRAINAGE DITCHES. FLETCHER A. WHITAKER, Stockton, Calif. Filed Oct. 2, 1919. Serial No. 327,906. 7 Claims. (Cl. 56—25.)

1. An apparatus for trimming weeds and other vegetable growth from the sides of a ditch comprising a carriage to traverse the length of the ditch, a cutter arranged on the carriage in position over the ditch, said cutter being provided with cutting members at opposite sides and means to reciprocate the cutter laterally whereby to cut the weeds first on one side and then on the other, said cutting members being effective to cut only during their movement away from the ditch.

5. An apparatus for trimming weeds and other vegetable growth from the sides of a ditch which comprises a carriage to transverse the length of the ditch, a cutter substantially in the form of a forwardly pointed V in plan, both sides of which are provided with cutting edges, means to reciprocate the cutter laterally whereby to cut the weeds first on one side and then on the other side of the ditch, said cutting edges being effective to cut only during their movement away from the ditch, and an upstanding shield on the cutter adjacent each cutting edge to cause the weeds to be carried away from the ditch.



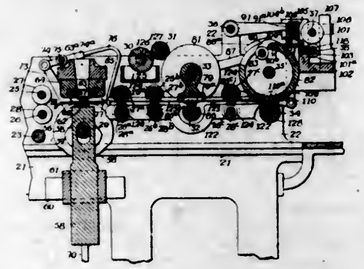
REISSUES.

14,935. PUMP AND PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 1, 1919. Serial No. 341,886. Original No. 1,253,559, dated Jan. 15, 1918, Serial No. 52,808, filed Sept. 27, 1915. 42 Claims. (Cl. 103—8.)

1. In a pump, a liquid chamber having inlet and outlet means, an exhaust passageway, a pressure medium passageway, a pressure motor, a valve mechanism operated by said pressure motor to control the connection of said chamber with said passageways, means controlling the con-

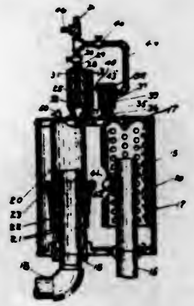
nection of pressure to and exhaust from said pressure motor, a water chamber having an inlet at the top and an outlet at the bottom, and a level controlled device in said water chamber mechanically connected with said controlling means.

2. In a pump, a liquid chamber having inlet and outlet means, an exhaust passageway, a pressure medium passageway, a pressure motor, valve mechanism operated by said pressure motor to control the connection of said chamber with said passageways, means controlling the connection of pressure to and exhaust from said pressure motor, a water chamber within said liquid chamber having an inlet at the top and an outlet at the bottom, and a level controlled device in said water chamber mechanically connected with said controlling means.



3. In a pump, a liquid chamber having inlet and outlet openings, an exhaust passageway, a pressure medium passageway, pressure means having one side arranged to be exposed to the pressure medium and its other side exposed to a motor chamber having two ports, one port an exhaust port and the other a pressure medium port, valves operated by said pressure means for closing said pressure medium port of said liquid chamber and opening said exhaust port of said liquid chamber, and vice versa, and valves for closing said pressure medium port of said motor chamber and opening said exhaust port of said motor chamber, and vice versa, and means for operating said last named valves.

4. In a pump, a liquid chamber having inlet and outlet openings, an exhaust passageway, a pressure medium passageway, pressure means having one side arranged to be exposed to the pressure medium and its other side exposed to a chamber having two ports, one port an exhaust port and the other a pressure medium port, valves operated by said pressure means for closing said pressure medium port of said liquid chamber, and opening said exhaust port of said liquid chamber, and vice versa, and valves for closing said pressure medium port of said motor chamber and opening said exhaust port of said motor chamber, and vice versa, and float means for operating said last named valves.



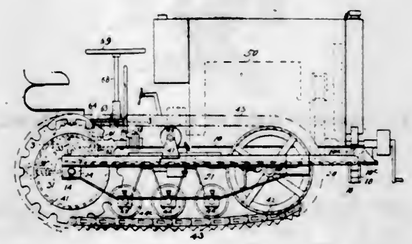
5. In a pump, a water chamber having inlet and outlet openings, an exhaust port for said chamber, a compressed air port for said chamber, pressure means having one side exposed to the interior of said water chamber and its other side exposed to a motor chamber having two ports, one port an exhaust port and the other a compressed air port, valves operated by said pressure means for closing said compressed air port of said water chamber and opening said exhaust port of said water chamber, and vice versa, and valves for closing said compressed air port of said motor chamber and then opening said exhaust port of said motor chamber, and vice versa, and means for operating said last named valves.

14,936. MACHINE FOR MAKING WINDOW-ENVELOP BLANKS. SAMUEL FURMAN, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Feb. 23, 1918. Serial No. 218,909. Original No. 1,182,364, dated May 9, 1916, Serial No. 31,484, filed June 1, 1915. 16 Claims. (Cl. 93—61.)

4. A machine for making window envelop blanks, comprising means for feeding successive blanks, said feeding means including a pair of disks having recessed portions adapted to discontinue momentarily the movement of each blank, positive means for intercepting each blank during the period of the discontinuance of its movement by said disks, and means for cutting a window opening in each blank while so intercepted.

14,937. AIR-LIFT SEPARATOR-PUMP. ORAN M. PRUITT, Indianapolis, Ind., assignor to Indiana Air Pump Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 19, 1917. Serial No. 181,619. Original No. 1,214,951, dated Feb. 6, 1917, Serial No. 93,635, filed Apr. 26, 1916. 22 Claims. (Cl. 103—84.)

1. An airlift separator pump, comprising an airlift pump having an eduction pipe, a separating chamber into which said eduction pipe discharges, said separating chamber having an outlet for permitting escape of air from the upper part thereof, a water outflow pipe leading from said chamber, and a float-controlled valve controlling the inlet to said water-outflow pipe, said float-controlled valve moving toward open and closed positions upon rise and fall respectively of the water level in said separating chamber.



2. An airlift separator pump, comprising an airlift pump having an eduction pipe, a separating chamber into which said eduction pipe discharges, said separating chamber having an outlet for permitting escape of air from the upper part thereof, a water outflow pipe leading from said chamber, and a float-controlled valve controlling the inlet to said water-outflow pipe.

3. An airlift separator pump, comprising an airlift pump having an eduction pipe, a separating chamber into which said eduction pipe discharges, said separating chamber having an outlet for permitting escape of air from the upper part thereof, a water outflow pipe having its intake end projecting upward into said separating chamber, a bell surrounding the intake end of said water-outflow pipe, said bell being provided with a water-admitting slot wider at the top than at the bottom, a cut-off ring slidable on said bell to variably open and close said slot, and a float carrying said cut-off ring and movable upon change in water level in said separating chamber to vary the position of said cut-off ring and the effective size of opening of said slot.

4. An airlift separator pump, comprising an airlift pump having an eduction pipe, a separating chamber into which said eduction pipe discharges, said separating chamber having an outlet for permitting escape of air from the upper part thereof, a water-outflow pipe having its intake end projecting upward into said separating chamber, a bell surrounding the intake end of said water-outflow pipe, said bell being provided with a water admitting slot, a cut-off ring slidable on said bell to variably open and close said slot, and a float carrying said cut-off ring and movable upon change in water level in said separating chamber to vary the position of said cut-off ring and the effective size of opening of said slot.

5. An airlift separator pump, comprising an airlift pump having an eduction pipe, a separating chamber into which said eduction pipe discharges, a water-outflow pipe leading from said chamber, a shell mounted on the top of said separating chamber and having a water-return pipe leading therefrom into said separating chamber below the minimum water level therein and also having a passage leading from the top of said separating chamber tangentially into the upper part of said shell, an air-escape pipe projecting into the middle of said shell, and a valve controlling the effective size of said air-escape pipe.

14,938. TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Dec. 6, 1919. Serial No. 343,093. Original No. 1,253,319, dated Jan. 15, 1918, Serial No. 137,964, filed Dec. 20, 1916. 21 Claims. (Cl. 180—9.2.)

1. In a tractor, the combination of two alined driving shafts, differential gearing therebetween which includes a differential drum having elongated oppositely extended tubular hubs in which said driving shafts are rotatably mounted, means for rotating said differential drum, and means whereby either driving shaft may be positively turned in its bearings in the associated drum hub in the same direction as that in which the said drum is turning and whereby the other driving shaft will be positively turned in its bearings in the associated drum hub but in the opposite direction to that in which the drum is turned.

DESIGNS.

56,113. TIRE-TREAD. MAURICE L. A. A. ALLARD, Akron, Ohio, assignor to W. H. Millikan, Cleveland, Ohio. Filed Apr. 6, 1920. Serial No. 371,778. Term of patent 14 years.

The ornamental design for a tire tread as shown.

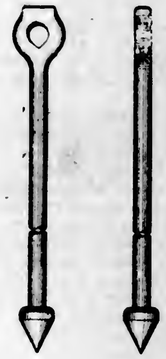
56,114. KAZOO. LOUIS V. ARONSON, Newark, N. J. Filed Sept. 25, 1919. Serial No. 326,403. Term of patent 3½ years.

The ornamental design for a kazoo, as shown.

56,115. BADGE, BUTTON, OR EMBLEM. CHARLES A. BERKEY, Highland Park, Mich. Filed Dec. 15, 1919. Serial No. 345,142. Term of patent 14 years.

The ornamental design for a badge, button, or emblem as shown.

56,116. KEY-RING. LOUIS J. BERRY and HARLEY SMITH, Yale, Okla. Filed Feb. 27, 1920. Serial No. 361,660. Term of patent 14 years.



The ornamental design for a key ring, as shown.

56,117. PHONOGRAPH-CABINET. GEORGE W. BRISTOL, Syracuse, N. Y., assignor of one-half to Nils G. Jensen, Syracuse, N. Y. Filed June 14, 1920. Serial No. 389,026. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

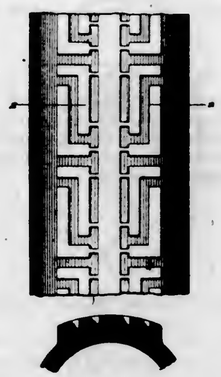
56,118. ANCHOR-ROD. ALBERT B. CHANCE, Centralia, Mo. Filed Nov. 22, 1919. Serial No. 339,954. Term of patent 14 years.

The design for an anchor rod substantially as shown and described.

56,119. FOOD-MASHER. BENJAMIN F. CRISENBERRY, Indianapolis, Ind. Filed June 18, 1920. Serial No. 390,040. Term of patent 14 years.

The ornamental design for a food masher, as shown.

56,120. HATBAND. JULES HENRI DE SIBOUR, Washington, D. C. Filed Mar. 31, 1920. Serial No. 370,355. Term of patent 7 years.



The ornamental design for a hat band, as shown.

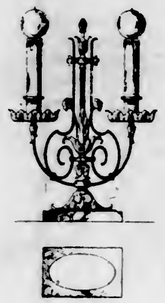
56,121. PILLOW TOP OR ARTICLE OF SIMILAR NATURE. MAX D. DREYFACH, New York, N. Y. Filed May 29, 1919. Serial No. 300,739. Term of patent 3½ years.

The ornamental design for an article of manufacture, namely a pillow top or article of similar nature, as shown.

56,122. TIRE. VICTOR EHRLICHER, Brooklyn, N. Y., assignor to Charles William Stores, Inc., a Corporation of New York. Filed Dec. 10, 1919. Serial No. 343,925. Term of patent 14 years.

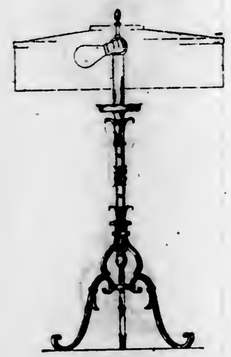
The ornamental design for a tire as shown.

56,123. SWIMMING-CAP. WALTER D. FORBES, Oakland, Calif. Filed June 24, 1918. Serial No. 241,713. Term of patent 14 years.



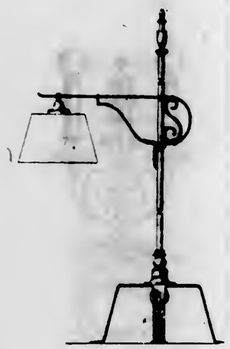
The ornamental design for a swimming cap, as shown.

56,124. ELECTRIC CANDLESTICK. FREDERICK A. FREICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,329. Term of patent 3½ years.



The ornamental design for an electric candlestick, as shown.

56,125. ELECTRIC CANDELABRUM. FREDERICK A. FREICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,330. Term of patent 3½ years.

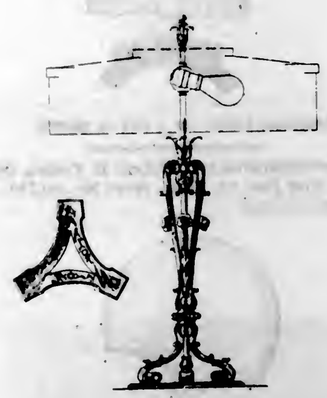


The ornamental design for an electric candelabrum, as shown.

56,126. ELECTRIC FLOOR-LAMP. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,332. Term of patent 3½ years.

The ornamental design for an electric floor lamp, as shown.

56,127. ELECTRIC BRIDGE-LAMP. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,333. Term of patent 3½ years.

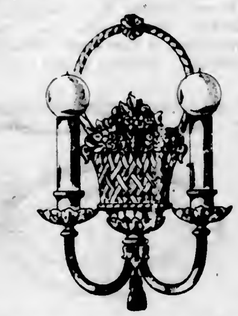


The ornamental design for an electric bridge lamp, as shown.

56,128. ELECTRIC BRIDGE-LAMP. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,334. Term of patent 3½ years.

The ornamental design for an electric bridge lamp, as shown.

56,129. ELECTRIC TABLE-LAMP. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,335. Term of patent 3½ years.



The ornamental design for an electric table lamp, as shown.

56,130. ELECTRIC CHANDELIER. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,336. Term of patent 3½ years.

The ornamental design for an electric chandelier, as shown.

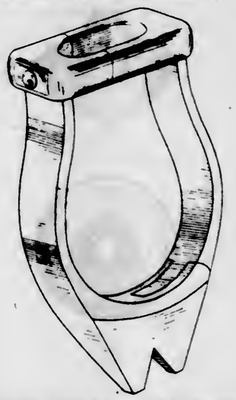
56,131. ELECTRIC WALL-BRACKET. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,337. Term of patent 3½ years.

The ornamental design for an electric wall bracket, as shown.

56,132. ELECTRIC WALL-BRACKET. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,338. Term of patent 3½ years.

The ornamental design for an electric wall bracket, as shown.

56,133. ELECTRIC CHANDELIER. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,339. Term of patent 3½ years.



The ornamental design for an electric chandelier, as shown.

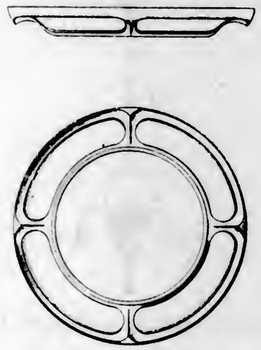
56,134. ELECTRIC CEILING-FIXTURE. FREDERICK A. FRERICHS, Philadelphia, Pa., assignor to Horn & Brannen Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,340. Term of patent 3½ years.

The ornamental design for an electric ceiling fixture, as shown.

56,135. AUTOMOBILE-LOCK. FREDERIC GEILINGER, Washington, D. C. Filed Mar. 18, 1920. Serial No. 366,997. Term of patent 7 years.

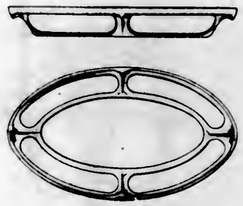
The ornamental design for an automobile lock, as shown.

56,136. TOY VEHICLE-WHEEL. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 19, 1919. Serial No. 278,069. Term of patent 14 years.



The ornamental design for a toy vehicle wheel, substantially as shown.

56,137. LIGHTING-FIXTURE. HOMER E. GLEASON, Seattle, Wash. Filed Aug. 16, 1919. Serial No. 318,045. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

56,138. TRIMMING FOR AN AUTOMOBILE-LIGHT OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,001½. Term of patent 7 years.

The ornamental design for a trimming for an automobile light or similar article of manufacture substantially as shown.

56,139. TRIMMING FOR AN AUTOMOBILE-LIGHT OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,002½. Term of patent 7 years.

The ornamental design for a trimming for an automobile light or similar article of manufacture substantially as shown.

56,140. HANDLE FOR AN AUTOMOBILE-DOOR LOCK OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,003½. Term of patent 7 years.

The ornamental design for a handle for an automobile door lock or similar article of manufacture substantially as shown.

56,141. HANDLE FOR AN AUTOMOBILE-DOOR LOCK OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,004½. Term of patent 7 years.

The ornamental design for a handle for an automobile door lock or similar article of manufacture substantially as shown.

56,142. TRIMMING-PLATE FOR AN AUTOMOBILE-DOOR LOCK OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,005½. Term of patent 7 years.

The ornamental design for a trimming plate for an automobile door lock or similar article of manufacture substantially as shown.

56,143. PLATE FOR AN ELECTRIC SWITCH OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,006½. Term of patent 7 years.

The ornamental design for a plate for an electric switch or similar article of manufacture substantially as shown.

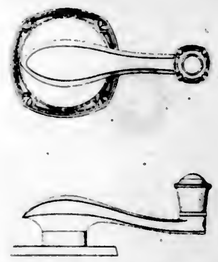
56,144. HANDLE CONSTRUCTION FOR AN AUTOMOBILE-WINDOW REGULATOR OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,007½. Term of patent 7 years.

The ornamental design for a handle construction for an automobile window regulator or similar article of manufacture substantially as shown.

56,145. HANDLE FOR AN AUTOMOBILE-DOOR LOCK OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,008½. Term of patent 7 years.

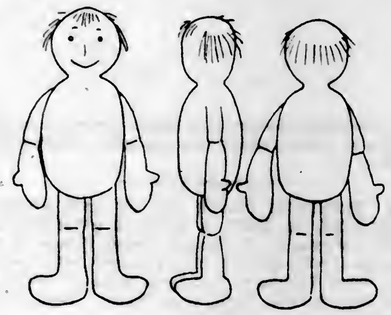
The ornamental design for a handle for an automobile door lock or similar article of manufacture substantially as shown.

56,146. TRIMMING FOR AN AUTOMOBILE DOME-LIGHT OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,009½. Term of patent 7 years.



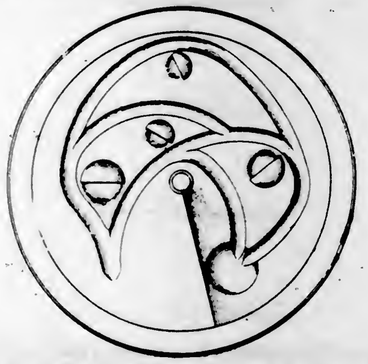
The ornamental design for a trimming for an automobile domelight or similar article of manufacture substantially as shown.

56,147. PLATE FOR AN ELECTRIC SWITCH OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,010½. Term of patent 7 years.



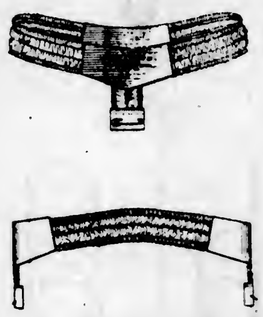
The ornamental design for a plate for an electric switch or similar article of manufacture substantially as shown.

56,148. HANDLE CONSTRUCTION FOR AN AUTOMOBILE-WINDOW REGULATOR OR SIMILAR ARTICLE OF MANUFACTURE. FREDERICK E. GREENE, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 359,011½. Term of patent 7 years.



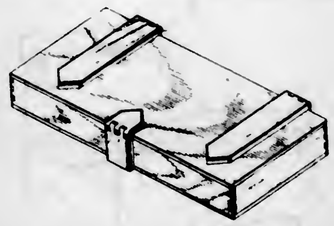
The ornamental design for a handle construction for an automobile window regulator or similar article of manufacture substantially as shown.

56,149. DOLL. JOHN B. GAUELLE, Norwalk, Conn. Filed Mar. 16, 1920. Serial No. 366,428. Term of patent 14 years.



The ornamental design for a doll as shown.

56,150. GAME-BOARD. JOSEPH GUERIN, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,490. Term of patent 3½ years.



The ornamental design for a game board as shown.

56,151. BELT. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1920. Serial No. 376,418. Term of patent 14 years.

The ornamental design for a belt as shown.

56,152. BOX. PETER HALL, Pasadena, Calif. Filed Mar. 24, 1920. Serial No. 368,414. Term of patent 14 years.

The ornamental design for a box as shown.

56,153. HANDLE FOR A SPOON, FORK, OR THE LIKE. CHARLES W. HARMAN, New Rochelle, N. Y., assignor to Joseph Fahys & Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1920. Serial No. 367,213. Term of patent 7 years.

The ornamental design of a handle for a spoon, fork or the like, as shown.

56,154. LIGHTING-FIXTURE. AMOS F. B. HARRADEN, Mount Vernon, N. Y. Filed Apr. 17, 1919. Serial No. 290,868. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

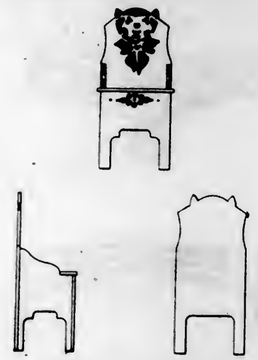
56,155. EMBLEM, BADGE, BUTTON, OR SIMILAR ARTICLE. MONROE E. HEILBRUN, New York, N. Y. Filed Dec. 24, 1918. Serial No. 268,175. Term of patent 3½ years.

The ornamental design for an emblem, badge, button, or similar article substantially as shown.

56,156. FRATERNITY PIN OR BADGE. ORLOFF HENRY, New Orleans, La., assignor to The Pi Kappa Alpha Fraternity, Atlanta, Ga., a Limited Partnership. Filed June 14, 1920. Serial No. 389,025. Term of patent 14 years.

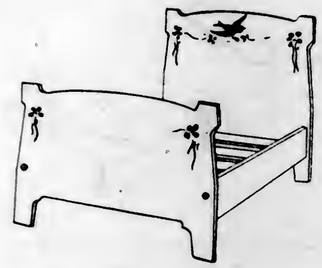
The ornamental design for a fraternity pin or badge as shown.

56,157. STREET-DIRECTION AND ADVERTISING DEVICE. HENRY J. HICKEY and WARNER E. MCMULLAN, Fort Dodge, Iowa. Filed June 19, 1919. Serial No. 305,443. Term of patent 3½ years.



The ornamental design for a street direction and advertising device as shown.

56,158. TIRE. RUFUS H. HOLBROOK, Brooklyn, N. Y., assignor to The Charles William Stores, Inc., a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,563. Term of patent 7 years.

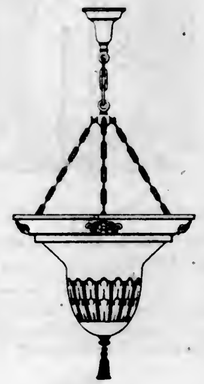


The ornamental design for a tire as shown.

56,159. TOY CHAIR. JULIA M. HOLLISTER, Des Moines, Iowa. Filed Apr. 27, 1920. Serial No. 377,122. Term of patent 7 years.

The ornamental design for a toy chair, as shown.

56,160. TOY BED. JULIA M. HOLLISTER, Des Moines, Iowa. Filed Apr. 27, 1920. Serial No. 377,123. Term of patent 7 years.



The ornamental design for a toy bed, as shown.

56,161. ANIMAL TOY. JULIA M. HOLLISTER, Des Moines, Iowa. Filed Apr. 27, 1920. Serial No. 377,124. Term of patent 7 years.

The ornamental design for an animal toy, as shown.

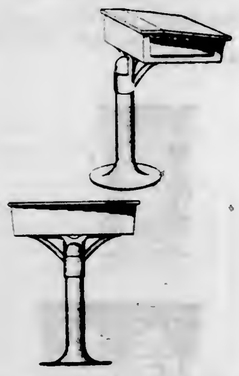
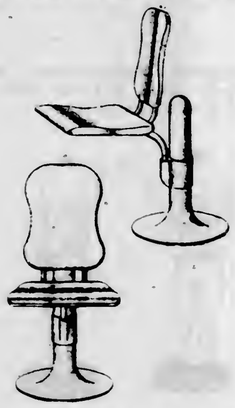
The ornamental design for an advertising cabinet, as shown.

56,166. STATUETTE. EDWARD HAZELL JONES, Snaresbrook, England. Filed Mar. 26, 1920. Serial No. 368,880½. Term of patent 14 years.



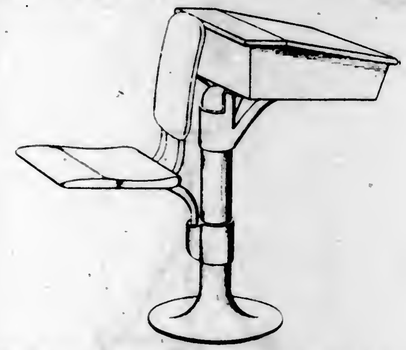
The ornamental design for a statuette as shown.

56,167. STATUETTE. EDWARD HAZELL JONES, Snaresbrook, England. Filed Mar. 26, 1920. Serial No. 368,881½. Term of patent 14 years.



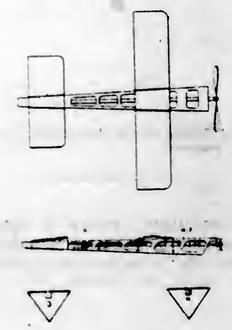
The ornamental design for a statuette as shown.

56,168. DESK. PALMER J. JONES and PAUL D. SCHREIBER, Port Washington, N. Y. Filed June 4, 1919. Serial No. 301,812. Term of patent 3½ years.



The ornamental design for a desk, substantially as shown.

56,169. SEAT. PALMER J. JONES and PAUL D. SCHREIBER, Port Washington, N. Y. Filed June 4, 1919. Serial No. 301,813. Term of patent 3½ years.



The ornamental design for a seat, substantially as shown.

56,170. COMBINED DESK AND SEAT. PALMER J. JONES and PAUL D. SCHREIBER, Port Washington, N. Y. Filed June 4, 1919. Serial No. 301,814. Term of patent 3½ years.

The ornamental design for a combined desk and seat, substantially as shown.

56,171. AERIAL TOY. STANLEY N. JUTHE, Newton, and SIDNEY H. LANG, Cambridge, Mass. Filed Apr. 21, 1920. Serial No. 375,634. Term of patent 3½ years.

The ornamental design for an aerial toy, as shown.

56,172. TEXTILE FABRIC. CLARA KATZ, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,411. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

56,173. PICTURE-FRAME. ZYGMUNT KLOTZ, Ralphton, Pa. Filed May 7, 1920. Serial No. 379,677. Term of patent 3½ years.

The ornamental design for a picture frame as shown.

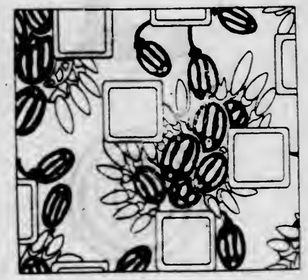
56,174. SPINDLE FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,671. Term of patent 7 years.

The ornamental design for a spindle for lighting fixtures, as shown.

56,175. ARM FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,672. Term of patent 7 years.

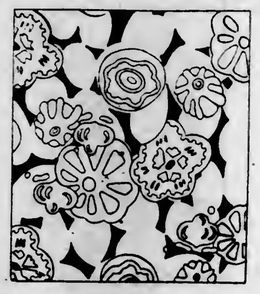
The ornamental design for an arm for lighting fixtures, as shown.

56,176. BRACKET-BACK FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,674. Term of patent 7 years.



The ornamental design for a bracket-back for lighting fixtures, as shown.

56,177. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,407. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

56,178. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,408. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

56,179. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,409. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

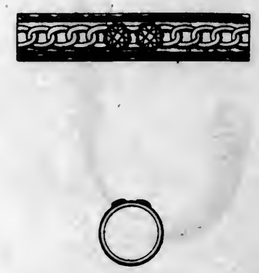
56,180. LACE. THYRA O. KUMALEHTO, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed May 21, 1920. Serial No. 383,292. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

56,181. DENTAL COTTON-HOLDER. THEODORE G. LEWIS, Buffalo, N. Y., assignor to Buffalo Dental Manufacturing Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 10, 1919. Serial No. 343,928. Term of patent 7 years.

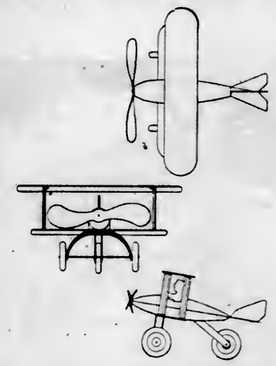
The ornamental design for a dental cotton holder, as shown.

56,182. TABLE OR SIMILAR ARTICLE. MARSHALL B. LLOYD, Menominee, Mich. Filed Apr. 2, 1920. Serial No. 370,885. Term of patent 14 years.



An ornamental design for a table or similar article substantially as shown.

56,183. TABLE OR SIMILAR ARTICLE. MARSHALL B. LLOYD, Menominee, Mich. Filed Apr. 2, 1920. Serial No. 370,886. Term of patent 14 years.

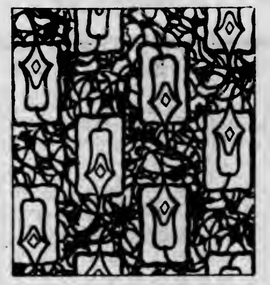


An ornamental design for a table, or similar article substantially as shown.

56,184. RING. SAMUEL MITCHELL, New York, N. Y. Filed Mar. 20, 1920. Serial No. 367,488. Term of patent 7 years.

The ornamental design for a ring as shown.

56,185. TOY AEROPLANE. ERNEST MONTELEONE, Jersey City, N. J. Filed June 16, 1919. Serial No. 304,713. Term of patent 7 years.

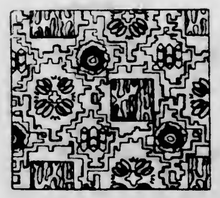


The ornamental design for a toy aeroplane as shown.

56,186. BARBER'S COMBINATION WORK-TABLE. EINAR J. NELSON, Tacoma, Wash. Filed May 11, 1920. Serial No. 380,672. Term of patent 7 years.

The ornamental design for a barber's combination work table, as shown.

56,187. TEXTILE FABRIC. LEON F. ORCUTT, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,401. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

56,188. TEXTILE FABRIC. LEON F. ORCUTT, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,402. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

56,189. TEXTILE FABRIC. LEON F. ORCUTT, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 18, 1920. Serial No. 382,403. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

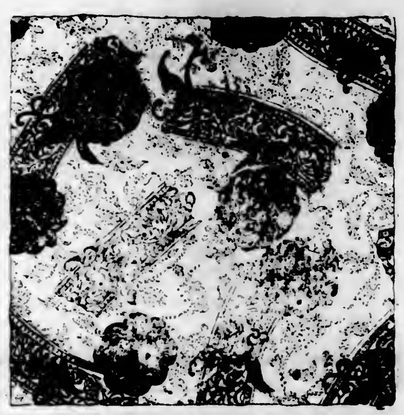
56,190. DOLL. ERNESTO PERUGGI, New York, N. Y. Filed Mar. 2, 1920. Serial No. 362,780. Term of patent 3½ years.

The ornamental design for a doll, as shown.

56,191. DOLL. ERNESTO PERUGGI, New York, N. Y. Filed June 7, 1920. Serial No. 387,191. Term of patent 3½ years.

The ornamental design for a doll, as shown.

56,192. PIANO-CASE. WILLIAM M. PLAISTED, Larchmont Manor, N. Y., assignor to Hazelton Brothers, New York, N. Y., a Corporation of New York. Filed May 24, 1920. Serial No. 383,994. Term of patent 3½ years.

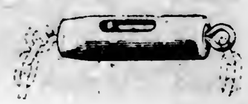


The ornamental design for a piano case as shown.

56,193. AUTOMOBILE TRAFFIC-SIGNAL. ERNEST RAPATTONI, Los Angeles, Calif. Filed June 7, 1920. Serial No. 387,194. Term of patent 7 years.

The ornamental design for an automobile traffic signal, as shown.

56,194. TEXTILE FABRIC FOR DECORATIVE PURPOSES. GEORGES REYBET, Jersey City, N. J. Filed June 1, 1920. Serial No. 385,839. Term of patent 3½ years.



The ornamental design for a textile fabric for decorative purposes, as shown.

56,195. TEXTILE FABRIC FOR DECORATIVE PURPOSES. GEORGES REYBET, Jersey City, N. J. Filed June 1, 1920. Serial No. 385,840. Term of patent 3½ years.

The ornamental design for a textile fabric for decorative purposes, as shown.

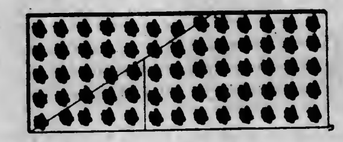
56,196. CLUTCH. WILLIAM ANTON SCHULER, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,391. Term of patent 14 years.

The ornamental design for a clutch, as shown.

56,197. POLE-HOLDER. RAYMOND A. SCHULTZ, Rochester, N. Y., assignor of one-half to Albert S. Donaldson, Watertown, N. Y. Filed Mar. 8, 1920. Serial No. 364,302. Term of patent 14 years.

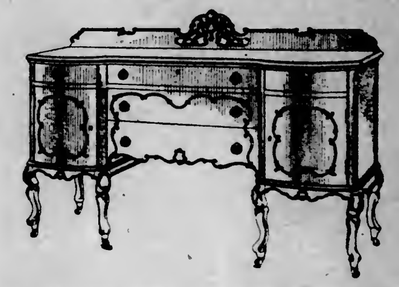
The ornamental design for a pole holder as shown.

56,198. EMBROIDERED LACE COLLAR. HENRY SCHWARBER, Weehawken, N. J., assignor to Inflexible Co., West New York, N. J. Filed May 8, 1920. Serial No. 379,992. Term of patent 3½ years.



The ornamental design for an embroidered lace collar substantially as shown.

56,199. EMBROIDERED LACE COLLAR. HENRY SCHWARBER, Weehawken, N. J., assignor to The Inflexible Co., West New York, N. J. Filed June 1, 1920. Serial No. 385,837. Term of patent 3½ years.

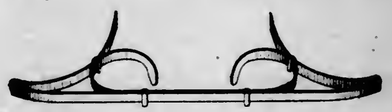


The ornamental design for an embroidered lace collar substantially as shown.

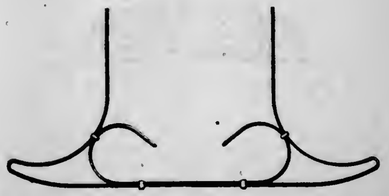
56,200. GAME-BOARD. EPHRIAM J. SCOTT, East Providence, R. I. Filed Sept. 22, 1919. Serial No. 325,560. Term of patent 3½ years.

The ornamental design for a game board, as shown.

56,201. BUFFET OR SIMILAR ARTICLE. HYMAN SILVER, Brooklyn, N. Y. Filed May 29, 1920. Serial No. 385,369. Term of patent 3½ years.

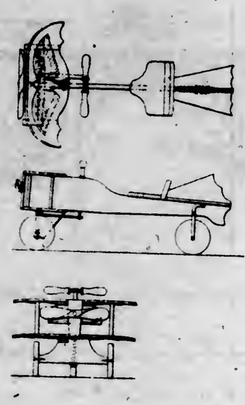


The ornamental design for a buffet or similar article, as shown.



56,202. SERVICE PICTURE-MAT. MILTON J. SMITH, Philadelphia, Pa. Filed July 24, 1918. Serial No. 246,603. Term of patent 3½ years.

The ornamental design for a service picture mat, as shown.



56,203. AUTOMOBILE-BUMPER. LEWIS F. STAFFORD, Chicago, Ill. Filed Mar. 17, 1920. Serial No. 366,710. Term of patent 7 years.

The ornamental design for an automobile bumper, as shown.

56,204. FOOT-PROPELLED CHILD'S CAR. JOHN H. STRAIN, Boston, Mass. Filed May 5, 1920. Serial No. 379,141. Term of patent 7 years.

The ornamental design for a foot propelled child's car as herein shown.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

BLAINE *v.* WHITE.

Decided June 2, 1920.

PATENTS—INTERFERENCE—REVIEW OF CONCURRING DECISIONS OF THE PATENT OFFICE.

Where the line which separates the respective contentions of the parties to an interference is quite attenuated and not easily perceived and the just consideration of the case calls for expert knowledge, the concurring decisions of the Patent Office tribunals will not be disturbed by the court except where error very clearly appears.

Mr. L. T. Greist and *Mr. W. N. Cromwell* for the appellant.

Mr. J. Edgar Bull for the appellee.

SMYTH, *C. J.:*

Blaine appeals from an award of priority against him in an interference proceeding. The invention involved relates to a sheet-guide adjustment on a printing-press. We do not think it necessary to set out any of the counts of the issue in view of the manner in which we think the matter should be disposed of. Blaine moved to dissolve the interference on the ground that count 1 was unpatentable in view of the prior art, and that the party White had no right to make count 2 of the issue. This motion was overruled by the Law Examiner. Blaine stood upon the record, took no testimony, and judgment of priority was given against him, he being the junior party. Afterward he filed several motions in the Office, all of which were denied. On appeal from the decision of the Examiner of Interferences he was defeated before the Board of Examiners, and their action was affirmed by the First Assistant Commissioner.

The subject involved is intricate, and its just consideration calls for expert knowledge. The line which separates the respective contentions of the parties is quite attenuated and not easily perceived. It is the settled rule of this court that where the three tribunals of the Patent Office concur in the disposition of such a case, the decision of the Commissioner will not be disturbed by this court except where error very clearly appears. (*Creveling* v. *Jepson*, 47 App. D. C., 597; *Lindmark* v. *Hodgkinson*, 31 App. D. C., 612; *Murphy* v. *Meissner*, 24 App. D. C., 260; *Stone* v. *Pupin*, 19 App. D. C., 396; *Podlesak* v. *McInnerney*, 26 App. D. C., 399.)

Blaine admits the rule but denies its applicability. He says that the three tribunals, while reaching the same conclusion, did so by different routes, some of which are inconsistent, or at least are not identical with the others. We think not. The Law Examiner held that the counts were patentable and readable upon the disclosures of both parties. In this he was affirmed by the Examiner of Interferences. On appeal the Board of Examiners rejected Blaine's contention that the counts were inconsistent, and refused to consider the prior art, because the meaning of the counts were not obscure and therefore needed no construction.

The necessity for judicial construction never arises until uncertainty is encountered. *Mayo* v. *Whedon*, 47 App. D. C., 138, 140.

The Board sustained the lower tribunals in their holding that the counts were patentable and readable on the claims of both parties. In this they were affirmed by the Assistant Commissioner, who held that Blaine had in no way established that the claims were not readable on the application of White. Having failed to do this, White was necessarily entitled to priority, being the senior party, and Blaine taking no testimony to overcome his date. We think the rule pertinent, and that there is a total absence of such error as would warrant us in overruling the Commissioner.

There is nothing in *Podlesak* v. *McInnerney* (26 App. D. C., 399) requiring a different conclusion. It was there ruled that if a certain course was followed in construing the claims, it might be found that there was no interference in fact, and the court sent the matter back to the Patent Office "for further consideration as to the identity of invention." Between this and what was held in the instant case we perceive no conflict.

For the reasons stated the decision of the Patent Office is affirmed and priority is awarded to Joseph White, the senior party.

Affirmed.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

BLAINE *v.* WHITE.

Decided June 2, 1920.

PATENTS—INTERFERENCE—REVIEW OF CONCURRING DECISIONS OF THE PATENT OFFICE.

Where the line which separates the respective contentions of the parties to an interference is quite attenuated and not easily perceived and the just consideration of the case calls for expert knowledge, the concurring decisions of the Patent Office tribunals will not be disturbed by the court except where error very clearly appears.

Mr. L. T. Greist and *Mr. W. N. Cromwell* for the appellant.

Mr. J. Edgar Bull for the appellee.

SMYTH, *C. J.:*

Blaine appeals from an award of priority against him in an interference proceeding. The invention involved relates to a sheet-guide adjustment on a printing-press. We do not think it necessary to set out any of the counts of the issue in view of the manner in which we think the matter should be disposed of. Blaine moved to dissolve the interference on the ground that count 1 was unpatentable in view of the prior art, and that the party White had no right to make count 2 of the issue. This motion was overruled by the Law Examiner. Blaine stood upon the record, took no testimony, and judgment of priority was given against him, he being the junior party. Afterward he filed several motions in the Office, all of which were denied. On appeal from the decision of the Examiner of Interferences he was defeated before the Board of Examiners, and their action was affirmed by the First Assistant Commissioner.

The subject involved is intricate, and its just consideration calls for expert knowledge. The line which separates the respective contentions of the parties is quite attenuated and not easily perceived. It is the settled rule of this court that where the three tribunals of the Patent Office concur in the disposition of such a case, the decision of the Commissioner will not be disturbed by this court except where error very clearly appears. (*Creveling* v. *Jepson*, 47 App. D. C., 597; *Lindmark* v. *Hodgkinson*, 31 App. D. C., 612; *Murphy* v. *Meissner*, 24 App. D. C., 260; *Stone* v. *Pupin*, 19 App. D. C., 396; *Podlesak* v. *McInnerney*, 26 App. D. C., 399.)

Blaine admits the rule but denies its applicability. He says that the three tribunals, while reaching the same conclusion, did so by different routes, some of which are inconsistent, or at least are not identical with the others. We think not. The Law Examiner held that the counts were patentable and readable upon the disclosures of both parties. In this he was affirmed by the Examiner of Interferences. On appeal the Board of Examiners rejected Blaine's contention that the counts were inconsistent, and refused to consider the prior art, because the meaning of the counts were not obscure and therefore needed no construction.

The necessity for judicial construction never arises until uncertainty is encountered. *Mayo* v. *Whedon*, 47 App. D. C., 138, 140.

The Board sustained the lower tribunals in their holding that the counts were patentable and readable on the claims of both parties. In this they were affirmed by the Assistant Commissioner, who held that Blaine had in no way established that the claims were not readable on the application of White. Having failed to do this, White was necessarily entitled to priority, being the senior party, and Blaine taking no testimony to overcome his date. We think the rule pertinent, and that there is a total absence of such error as would warrant us in overruling the Commissioner.

There is nothing in *Podlesak* v. *McInnerney* (26 App. D. C., 399) requiring a different conclusion. It was there ruled that if a certain course was followed in construing the claims, it might be found that there was no interference in fact, and the court sent the matter back to the Patent Office "for further consideration as to the identity of invention." Between this and what was held in the instant case we perceive no conflict.

For the reasons stated the decision of the Patent Office is affirmed and priority is awarded to Joseph White, the senior party.

Affirmed.

Court of Appeals of the District of Columbia.

BRUCKMAN *v.* MILLER.

Decided June 2, 1920.

1. PATENTS—INTERFERENCE—REOPENING AFTER APPEAL TO COMMISSIONER TO TAKE FURTHER PROOFS.

In an interference between B. and M., in which the question was one of originality, where, after hearing on appeal to the Commissioner from a decision of the Ex-

aminers-in-Chief awarding priority to M., B. filed a motion to reopen the interference to take the testimony of M., supporting the motion by affidavits executed by M. to the effect that B. disclosed the invention to him, it was error to refuse the motion to reopen.

2. SAME—SAME—POWER OF COMMISSIONER TO REOPEN INTERFERENCE TO TAKE ADDITIONAL TESTIMONY.

Interference proceedings are of an equitable nature, and so long as a case is pending in the Patent Office it is within the supervision of the Commissioner, who is charged with the duty of seeing that full justice is done, and he may, under his supervisory power, order a case reopened for the taking of additional testimony.

3. SAME—SAME—ORIGINALITY.

In an interference between B. and M., involving the question of originality, evidence considered and *Held* that B. disclosed the invention in issue to M.

Mr. A. E. Dieterich for the appellant.

Mr. F. S. Geisler for the appellee.

VAN ORSDEL, *J:*

The issue of this interference relates to the invention of a machine for making cones used as receptacles for ice-cream.

It is unnecessary to set out the claims or to consider the invention in detail, since the appeal turns wholly upon the question of originality.

It is urged by appellant, the junior party, that appellee Miller derived from him the information which enabled him to file his application for patent.

Certain conceded facts are important. Both parties were employed by the Crystal Ice & Storage Company, of Portland, Oreg. Miller had access to the room where Bruckman was engaged in building a rotary cone-making machine which he had invented, and of which the present invention is a modification. Miller admits that he frequently visited the room where Bruckman was at work, and admits that Bruckman disclosed to him the broad idea of the present invention, but denies that he derived from him any information as to the details by which the problem could be solved.

The Examiner of Interferences found in favor of Bruckman, but was reversed by the Board of Examiners-in-Chief and the Assistant Commissioner, upon the ground, as stated by the Commissioner—

if the claims cover broadly the mere reversal of the moving parts (the molds and the batter carriage) in the machine of this patent, then it is clear that either there was no invention, or that Miller got the broad idea from Bruckman. If, on the other hand, the invention is more narrowly the specific means of operating; that is to say, the solution of the problem of reversing the relative motions of the heavy and light parts,—then Bruckman entirely fails to show any disclosure to Miller.

We are convinced from a careful review of the testimony that Bruckman not only disclosed to Miller the broad idea of the invention, but the means of operation, to enable Miller, with the additional knowledge he had of the Bruckman rotary machine then in course of construction, and with the assistance of counsel, to prepare his application for patent. In these matters Miller stands alone, while Bruckman is amply corroborated. This deduction from the testimony is verified, however, by the sworn admissions of Miller. When the case was pending on appeal before the Assistant Commissioner, Miller voluntarily made two affidavits in which he admitted that he derived the whole invention from Bruckman. He states in the first affidavit as follows:

I make this affidavit for the reason that I have been instrumental in causing Mr. Bruckman a good deal of trouble and expense and that Mr. Bruckman originated the idea of the machine I have been heretofore claiming as my own.

In the second affidavit, after stating in detail the circumstances under which he derived the information from Bruckman, he says:

As heretofore stated, I made this affidavit and the affidavit dated December 25, 1918, of my own free will; that I have not received any money or property of any kind or promise of reward for making the same; that I voluntarily approached Mr. Bruckman and told him what I would do; that we have discussed what occurred, when he was working on his machine and from talking the matter over, my mind has been refreshed and matters that did not transpire have been called to mind; that I had entirely forgotten. I very much regret to make this affidavit. I feel it my duty now to make the affidavit; that I am convinced that I would not have been able to build this machine if I had not obtained the original idea from Mr. Bruckman.

The Commissioner, in denying Bruckman's motion to reopen the proofs and introduce the testimony of Miller, gave, as a reason, that in the affidavits—

Miller fails to say that Bruckman disclosed to him the real invention in issue,

and also that the affidavits did not disclose newly-discovered evidence—

for not only was it open to Bruckman to take Miller's testimony at the time of taking his proofs, but Miller was bound to know when he testified, all that he now alleges he knows and proposes to testify.

These proceedings are of an equitable nature, and, so long as the case is pending in the Patent Office, it is within the supervision of the Commissioner, who is charged with the duty of seeing that full justice is done, proceeding with due regard for the requirements of the statutes and the rules of practice affecting procedure in the Patent Office. There was nothing, however, to prevent the Commissioner in the exercise of his supervisory power to order the case reopened for the taking of additional testimony.

While the denial of the motion to reopen the case constitutes reversible error, which would, standing alone, necessitate sending the case back for the taking of further testimony, we deem this course unnecessary, since on the evidence, regardless of the affidavits, Bruckman is entitled to priority.

The decision of the Commissioner of Patents is reversed, and the clerk is directed to certify these proceedings as by law required.

Reversed.

The decision of the Assistant Commissioner reads as follows:

CLAY, *Assistant Commissioner:*

Bruckman appeals from a decision of the Examiners in-Chief which, reversing the decision of the Examiner of Interferences, awarded priority to Miller on an issue in ten counts sufficiently illustrated by the following:

1. In a baking machine including a carriage for conveying batter to the oven and moving adjacent the latter, an oven comprising a core, a conforming mold for said core comprising separable parts, pivoted arms operating the separable parts, means for heating the oven, and means on the carriage for operating said pivoted arms, whereby said molds are opened and closed in time with the movement of the carriage.

3. In a machine of the class described, a plurality of sets of molding devices relatively stationarily located, a carriage adapted to be passed along from one set of molding devices to another, each of said molding devices including parison molds and cores therefor, and mold-section securing latches, a batter reservoir on the carriage, devices on the carriage for engaging said mold-section securing devices to unlock the same and open the molds, devices on the carriage for raising the cores in the molds to strip the molded product from the same, a device on the carriage for engaging the mold securing means to reclose the parison mold sections, instrumentalities on the carriage for transferring the batter from the reservoir to the molding devices.

6. In a machine of the class described, a plurality of sets of molding devices relatively stationarily located and each comprising a pair of female half molds and a core for the same, devices connecting said half molds together, a carriage designed to be passed by said molds, a batter reservoir on said carriage, means on said carriage for engaging said half-mold connecting means to open the half-mold sections, means on said carriage for raising the cores to strip the cones from the same, means on said carriage for engaging said half mold connecting means to reclose said half mold members, and mechanism on the carriage coöperating with the molding devices for supplying batter thereto, said molding devices including heat applying instrumentalities for baking purposes.

9. In a machine of the class described, a plurality of sets of molding devices arranged in a row, each set of molding devices comprising sectional molds and cores for the same, a carriage arranged to be passed along by the molds, batter supplying instrumentalities on said carriage, mold opening and closing mechanism on the carriage, and means for holding the carriage in position with respect to the different molds while effecting the operation of charging the molds with batter.

The main question seems to be one of originality; but a proper determination of this requires a clear delineation of the invention in issue. The Examiner held that Bruckman had disclosed it to Miller. The Examiners-in-Chief held this to be error. In reaching their conclusions these tribunals attributed to the claims very different scopes. Bruckman developed the rotary machine of his patent, No. 1,071,027, August 26, 1913. If the claims cover broadly the mere reversal of the moving parts (the molds and the batter-carriage) in the machine of this patent, then it is clear that either there was no invention or that Miller got the broad idea from Bruckman. If, on the other hand, the invention is more narrowly the specific means of operating—that is to say, the solution of the problem of reversing the relative motions of the heavy and light parts—then Bruckman entirely fails to show any disclosure to Miller.

The claims originated in part in each of the applications; but it is obvious from the histories of both applications that the invention is not broad enough to read upon a mere reversal of the parts in Bruckman's patented rotary machine. There was no invention in the mere idea of making the mold stationary and moving the carriage for the batter: but the invention was in the means of successfully accomplishing this desired end. Yet what Bruckman disclosed to Miller, even according to his own testimony, was just this. This was a statement of the problem, not its solution. Not only does Miller flatly deny Bruckman's statement that Bruckman disclosed the invention to him, but I think Bruckman himself corroborates Miller's position. Over and over again he says that he disclosed only the general idea of the stationary mold and the moving carriage as an alternative form of his own rotary machine, which had traveling molds. Bruckman says at page 25 that in 1909 he conceived two ways of making an automatic cone-baking machine:

One way was to place the molds on a bench or in a row and operating them with a carriage with devices for operating the molds, or by placing the molds on a rotatable wheel and have the operating devices stationary, which would operate the molds as they passed.

He went on and developed the rotary machine of the patent referred to and abandoned the reciprocating machine. In Miller's machine the mold or "oven" (Figures 6 and 7) is composed of the two halves *m* on pivoted arms *n* and a core *i*, which has a vertical reciprocation to strip off the cone when the female mold is open. The whole mold remains in place, while the carriage *p* passes under it, acting to open the mold by means of *a* cam *q*, lifting the slotted cam-plate *k*. Before this the core *i* is raised, as in Fig. 7, so that the baked cone may drop off. Thereupon, the carriage being now stopped and the female mold out of the way, the batter-dipper *s'* is raised to coat the core *i* with new batter. Both parts of the mold carry electric heating devices. This machine is in many ways different from Bruckman's patented machine, and Bruckman is in error in thinking that it is—

simply a reversal of the parts; that is, in the rotary machine the parts that are movable are stationary in the reciprocating type and the parts that are movable in the reciprocating type are stationary in the rotary. (p. 30.)

All Bruckman's testimony rests on this error. At page 32 he agrees with the Examiner's attempted testimony that the invention in issue is this mere reversal of parts. While he says at page 42 that he had the idea of lifting the batter-cup to apply batter to the cone, he says that he gave up that idea and that he never built any machine of that type at all, (p. 43 and p. 59.) He seems reluctant (p. 63) to state that the machine of his present application was patentable over the patented machine.

I think it reasonably clear that whatever specific idea Bruckman may have had at the time of his conference with Miller he deliberately abandoned it in favor of the rotary type of machine. (See X-Q. 16, p. 67.)

As to what he actually described to Miller, he says, (p. 70:)

I don't remember whether I had any drawings or not. I think, though, I made some sketches in order to explain to him how I had planned on building it. * * * They would only show the broad construction of it. I would not draw out any detail work on it; simply showing the difference between how the machine could be constructed in this form of a reciprocating type rather than the rotary.

What he explained to Miller was just what he explained to others, (p. 68.) When specially urged to state definitely just what he disclosed to Miller, he was unable to recollect anything more than the mere matter of reversibility, broadly considered. (R. D. Q. 2, p. 80.) Nowhere in his record is there any statement of any particular construction disclosed to Miller.

To construe the issues to mean what Bruckman disclosed to Miller is to construe them out of existence, for in that case there is no invention involved. On the other hand, the broadest of the claims in issue requires a batter-conveying carriage moving past an oven which comprises a core and a female mold in separable parts mounted on pivoted arms and devices on the carriage for operating said arms, together with heating means for the oven. In the machines of both parties this heating means for the

oven is a part of or fixed to the oven and has no relative motion, as is the case of the gas-jets in the rotary machine of the patent. Supposing one to have the patent before him and to be told that the parts might be reversed, so as to leave the molds stationary and move the battery-carriage relatively thereto, he would still have about as much of a problem to solve in order to arrive at the invention in issue as if he had had the disclosure of the patent alone.

Not only does Bruckman's testimony entirely fail to show a disclosure to Miller of the particular construction which constitutes the invention in issue, but I think what Bruckman and his witnesses do say substantially corroborates Miller's testimony that Bruckman did not disclose the invention to him. Bruckman's brother, L. A. Bruckman, although attempting to state on hearsay that Miller got his ideas from Bruckman, is yet unable himself to relate any conversation in which Miller could have gotten anything more than the bare suggestion—

that the movable parts on the rotary machine would be stationary and placed on a bench on a straight line and some kind of a device to travel along to open and close it and operate it, (p. 111.)

Witness Fosdick not only makes it clear that Bruckman abandoned the idea of the reciprocating machine, but he says that from the information he got from Bruckman he would still "have had to work out the dimensions and all the details," (p. 120.) He nowhere states anything definite as being disclosed even to him, and it is obvious that he does not because he cannot.

After hearing was had on this appeal Bruckman filed a motion to reopen the proofs and introduce testimony of Miller to the effect that he, Miller, received a disclosure from Bruckman. The motion is supported by affidavits of Miller attempting a disclaimer of inventorship; but even in this attempted disclaimer Miller fails to say that Bruckman disclosed to him the real invention in issue. After saying—

I lost track of the fact that I got the idea of my machine from Mr. Bruckman,

and although he has, since giving his testimony, discussed with Bruckman what occurred at the time of the alleged disclosure of Bruckman to Miller and although he has had his mind refreshed and says he—

felt convinced that he would not have been able to build this machine if he had not obtained the original idea from Bruckman,

yet when he comes to state what idea he did get from Bruckman he does not state any idea that constitutes the invention in issue. With the rotary machine before them both, he says, Bruckman—

stepped over to the bench and he demonstrated how he could take these ovens and set them spaced the proper distance apart in a longitudinal way, or in other words, side by side on this bench and then have a carriage or device which I can operate by hand or operate the molds that would travel forward and backward and operate the different cams much better than as set up on this frame or round wheel. (Affidavit dated December 25, 1918, p. 2.)

This is all of the description, and it falls short of covering the invention in issue. There is not in the entire record any description of any means for operating the reciprocating machine, as in the applications of the parties hereto nor as contemplated by the issues.

It is clear enough that Miller would be estopped to deny that he is the inventor so far as such denial is detrimental to the interests of his assignee and as against that assignee, (Rob. on Pats., Vol. III, p. 250;) but I know of no law by which the estoppel could bind Bruckman unless there is some privity between Miller and Bruckman. (A. and E. Encycl., Vol. II, p. 439.) Bruckman was at the proper time entitled to use any witness he could find to prove his disclosure to Miller and could have used Miller himself. Thus if on cross-examination Miller had admitted that Bruckman disclosed to him that would certainly have been admissible evidence for Bruckman, notwithstanding it operated in derogation of the rights of Miller's assignee, the real party in interest against Bruckman. In other words, the estoppel against Miller does not go to the extent of making his testimony inadmissible to show that he was not the inventor when that testimony is taken for the benefit of Bruckman, who was not a party to the transaction which worked the estoppel. (See *De Laval Co.* v. *Vermont F. M. Co.*, 135 Fed. Rep., 772.)

But Bruckman's motion to reopen is refused on other grounds. There is here no newly-discovered evidence in any such sense as would warrant a reopening, for not only was it open to Bruckman to take Miller's testimony at the time of taking his proofs, but Miller was bound to know, when he testified, all that he now alleges he knows and proposes to testify. The sources of his knowledge were the same then as now. A mere change of mind or better recollection upon further thought is no ground for reopening. Besides which, his change of mind is open to suspicion under the circumstances. No new facts have been found. His interests have changed somewhat, since he is now an employee of Bruckman's company. Moreover, in any case his testimony would not be any stronger proof than his present attempted admission against interest, and his affidavit is not only not convincing, but even if believed it apparently shows that if he did testify he would only corroborate his previous testimony, at least so far as it is concerned with the particulars of the invention in issue. He does not state any good reason why he was mistaken in the first place or why his testimony on this point now would better accord with the rest of his testimony.

The motion to reopen the proofs being denied, I am satisfied that Miller was the first inventor of the issue for the reasons more fully given by the Examiners-in-Chief. I entirely agree with them, and their decision is affirmed.

Court of Appeals of the District of Columbia.

THE PREST-O-LITE COMPANY, INC., *v.* PLAY-O-LITE COMPANY, INC.

Decided June 2, 1920.

TRADE-MARKS — "PREST-O-LITE" — RIGHT TO PREVENT REGISTRATION OF "PLAY-O-LITE" IN FIELD OCCUPIED BY SIMILAR MARKS.

Where opposer adopted the mark "Prest-O-Lite" in 1904 for use on gas-tanks and did not extend its use to storage batteries until 1915, it is not entitled to successfully maintain opposition to the registration of "Play-O-Lite," adopted by applicant in 1917 for electric lamps, where others had adopted and used the words "Linolite," "Tubolite," "Portalite," and "Pract-El-Lite" prior to opposer's extension of its mark to storage batteries and had registered the same.

Mr. E. W. Bradford for the appellant.

Mr. Wm. F. Hall for the appellee.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office in a trade-mark opposition proceeding.

In 1904 appellant adopted the mark "Prest-O-Lite" for use on gas-tanks, and in 1915 it applied the same mark to the manufacture of storage batteries. In 1917 appellee adopted the mark "Play-O-Lite" for use on electric lamps for illuminating the front of pianos. The record shows that "Linolite" was registered for use on incandescent electric lamps in 1907, the application showing use of the mark since 1902. "Tubolite" was registered in 1909 for the same goods, the date of use being 1906. "Portalite" for use on electric lamps was registered in 1912, while "Pract-El-Lite" for incandescent electric lights was registered in 1915, with July of 1914 as the date of use. So far as appears, all these marks are in use and were in use when appellant extended its business to cover or include storage batteries. We have just ruled, in *French Battery & Carbon Company* v. *The Prest-O-Lite Company*, present term, where the facts were the same, that the Prest-O-Lite Company was not in a position to prevent the registration of "Ray-O-Lite" for use on electric lamps. The same reasoning applies here. When "Linolite," "Tubolite," "Portalite" and "Pract-El-Lite" were registered for use on electric lamps and lights the field was open, for at that time appellant was using its mark on gas-tanks. Appellant's subsequent use of its mark in 1915 on storage batteries did not entitle it, of course, to strike down the prior registrations made in good faith or destroy the business of the various firms securing those registrations. (See *United Drug Co.* v. *Rectanus*, 248 U. S., 90, 101.) As the field already was occupied, it follows that appellant is not in a position to object to the registration by appellee of its mark for use on electric lights.

The decision is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

H. KUHN & SONS (INC.) *v.* LETTS.

Decided June 2, 1920.

1. TRADE-MARKS—USE NECESSARY TO ESTABLISH RIGHT TO REGISTRATION.

Use of a trade-mark in interstate commerce or in commerce with foreign nations or with Indian tribes is a prerequisite to its registration, and the use contemplated is use by the applicant himself or by some one for him and not an independent or incidental use by a third party. Hence where persons outside the State of California, where appellee was doing business, procured appellee's goods in California and had them sent outside that State appellee could take no benefit from such transaction, and the business being otherwise local appellee failed to show the requisite use.

2. SAME—EVIDENCE OF INTERSTATE USE—SUFFICIENCY—TAKING ADDITIONAL TESTIMONY.

Where in a trade-mark interference proceeding, an applicant is refused permission by the Commissioner to take further testimony to prove interstate commerce on the ground that the testimony in the case shows such use, and on appeal the court concluded that the testimony is insufficient for this purpose, although such use is alleged in the declaration, *Held* that the denial of the request to take further testimony was error, and the case reversed and remanded with directions to permit the introduction of the same.

Mr. Harlan Moore for the appellant.

Mr. C. J. O'Neill for the appellee.

ROBB, *J.:*

Appeal from a decision of the Commissioner of Patents in a trade-mark interference proceeding involving the mark "American Boy."

Appellant was granted registration of the mark in 1917, on an application filed in 1915, and its use of the mark commenced just prior to the filing of its application.

Appellee is the proprietor of a department store in Los Angeles, California, and the testimony clearly shows local use of "American Boy" as a trade-mark long prior to the earliest date claimed by appellant. The sole question is whether an interstate use has been shown. The evidence on this point tended to show that parties outside California had written to friends or relatives in Los Angeles and, through them, had purchased "American Boy" clothing, and that those purchases were shipped by such friends or relatives to their ultimate destination. Aside from vague and unsatisfactory testimony by a representative of appellee's firm, this was the evidence upon which appellee depended to show interstate use.

The Trade-Mark Act, (33 Stat., 724.) requires an applicant for registration to accompany his application—

by a written declaration verified by the applicant that such trademark is used in commerce among the several States, or with foreign nations, or with Indian tribes * * *.

Applicant complied with this provision in the present case by declaring under oath—

that said trademark is used by him in commerce among the several States of the United States.

Clearly the use contemplated by the statute is a use by the applicant himself, or by some one for him, and not an independent or incidental use by a third party, the reason being that before an applicant is entitled to registration he must show that his business extends beyond the boundaries of his own State or into the territory of an Indian tribe. Appellee's business, so far as the present record shows, was local. That persons outside the State procured appellee's goods in California and had them sent outside that State is beside the question, for appellee was in no way responsible for, and hence could not benefit by, such a transaction. The sale was local and not interstate. Appellee evidently appreciated the difficulty, for in the Patent Office he requested an opportunity to introduce further testimony "to prove interstate commerce" but the Commissioner, being of the view that appellee had "fairly proven the interstate use" of the mark, did not deem it necessary to reopen the case.

The decision must be reversed but, in the circumstances, the case will be remanded with directions to permit appellee to introduce further testimony on the question of interstate use. Reversed and remanded.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 2, 1920.

Ampere Manufacturing Co., its assigns or legal representatives, take notice:

A cancelation proceeding having been instituted by this Office upon the application of Diamond Electric Specialties Corporation, 103 South Orange avenue, Newark, N. J., to effect the cancelation of the trade-mark registration of Ampere Manufacturing Co., Nos. 408–412 West Thirteenth street, New York, N. Y., No. 65,605, dated October 8, 1907, and the notice of such proceeding sent by registered mail to the said Ampere Manufacturing Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ampere Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 11, 1920.

Peter S. Maroosis, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William S. Maroosis, corner of Washington avenue southeast and Oak street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered January 28, 1902, No. 37,688, to Peter S. Maroosis, 257 and 259 First avenue south, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said Peter S. Maroosis at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Peter S. Maroosis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 17, 1920.

Frederick Gardner, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Ward Baking Company, Southern Boulevard and East One Hundred and Forty-third street, New York, N. Y., for registration of a trade-mark and trade-mark registered January 8, 1907, No. 59,440, to Frederick Gardner, 151 East Van Buren street, Chicago, Ill., and a notice of such declaration sent by registered mail to said Frederick Gardner at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Frederick Gardner, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., August 17, 1920.

H. Chaloner & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Pendleton Creamery Company, Pendleton, Ind., for registration of a trade-mark and trade-mark registered June 18, 1901, No. 36,614, to H. Chaloner & Co., 36 Water street, New York, N. Y., and a notice of such declaration sent by registered mail to said H. Chaloner & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said H. Chaloner & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 17, 1920.

Retailers' Cooperative Association, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Henry Thayer & Co., Inc., of 150 Broadway, Cambridge, Mass., for registration of a trade-mark and trade-mark registered November 12, 1912, No. 89,143, to Retailers' Cooperative Association, of 423 Market street, Camden, N. J., and a notice of such declaration sent by registered mail to said Retailers' Cooperative Association at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Retailers' Cooperative Association, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

Correction of Drawings.

RULE 72. • • • • •

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Substitute drawings will not be admitted in any case unless required by the Office.

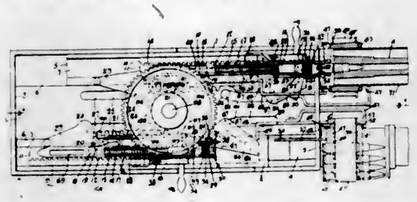
PATENTS

GRANTED AUGUST 31, 1920.

1,351,015. TIRE-CASING. ARTHUR V. ANDERSON and ALFRED M. MORGAN, Fort Worth, Tex., assignors to Ford Tire & Rubber Company, Fort Worth, Tex., a Trust Estate. Filed Jan. 2, 1920. Serial No. 348,800. 1 Claim. (Cl. 152—18.)

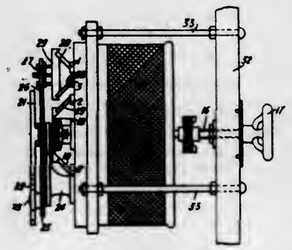


In a tire casing, a carcass formed of fabric and rubber, and puncture preventing means embedded in the tread portion of the carcass, such means comprising a plurality of separate transverse sections, each separate transverse section being formed of a transverse imperforate plate and sections of wire fabric arranged upon the outer and inner faces of the imperforate plate, said sections of wire fabric extending beyond the opposite sides and ends of the imperforate plate for substantial distances, means connecting the imperforate plate near its ends with the end portions of the wire fabric, the separate transverse sections being arranged in overlapping relation with their imperforate plates overlapping.

1,351,016. KNITTING DEVICE. FREDERIKA G. BELL, St. Paul, Minn. Filed July 30, 1917. Serial No. 183,406. 1 Claim. (Cl. 66—17.)

An attachment for knitting needles comprising a sleeve having a hook at one end, and adapted to be slipped over and frictionally retained on the end of the needle.

1,351,017. AUTOMATIC GUN. CHARLES C. BLACKMORE, Dayton, Ohio. Filed Nov. 7, 1918. Serial No. 261,446. 12 Claims. (Cl. 89—2.)

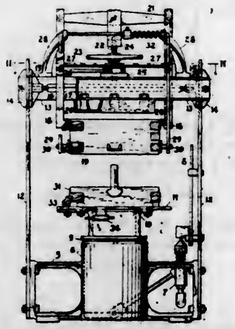


1. In an automatic gun, the combination, a frame, a plurality of longitudinally operable barrels each having a receiver slide secured thereto and operable in said frame, a breech bolt operable in each of the receiver slides, a firing pin operable in each breech bolt, a rack and gear interposed between the opposite receiver slides and breech bolts, respectively, said gears operating in unison and said racks being operable independently of each other, and loading mechanism whereby the firing and recoil of one barrel will actuate said mechanisms in sequence to load and fire another barrel.

1,351,018. BISCUIT-STACKING MACHINE. FRANK BLANDO, New York, N. Y. Filed Dec. 27, 1919. Serial No. 347,692. 17 Claims. (Cl. 107—45.)

1. In a biscuit stacking machine, the combination with means for carrying pans of biscuits through the machine, of means for removing said biscuits from the pans, and means for loosening said biscuits from the pans before removal.

1,351,019. ELECTRIC REGULATING-RHEOSTAT. LAWRENCE BOOTHMAN, Manchester, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 4, 1915. Serial No. 12,214. 7 Claims. (Cl. 219—48.)

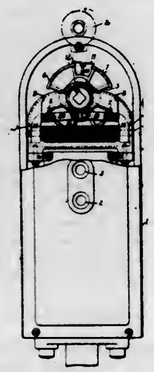


1. A rheostat for electric circuit control comprising a main series of rheostat elements, a subdividing rheostat associated therewith, contact members adapted to progressively engage the said main and subdividing rheostats, and gearing for operating the said contact members in timed relation to each other, said gearing comprising a gear wheel carrying the contact member belonging to the main rheostat, a second gear wheel meshing with the said contact-carrying gear wheel, a third gear wheel adapted to rotate in unison with the said second gear wheel, and a lever secured to move in unison with the contact member belonging to the subdividing rheostat and adapted to periodically engage the said third gear wheel and to partially rotate the said gear wheel at each such engagement.

1,351,020. MOLDING-MACHINE. WILLIAM F. BRADY, Newark, N. J., assignor to Crocker-Wheeler Company, Ampere, N. J., a Corporation of New Jersey. Filed June 11, 1919. Serial No. 303,390. 7 Claims. (Cl. 22—25.)

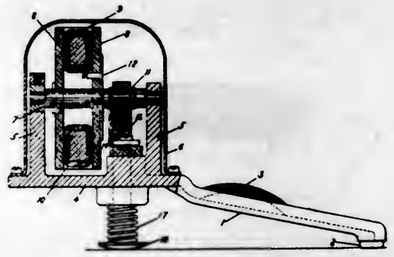
1. In a sand molding machine, the combination of a horizontal flask-supporting table, a crosshead, a rammer

attached to the crosshead, drawing hooks carried by the crosshead for engaging the cope of the flask when it is



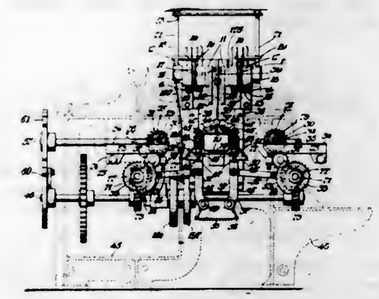
under the rammer, and means for effecting relative vertical movement of the crosshead and table, substantially as described.

1,351,021. ABRASIVE-DISK WHEEL. SAMUEL M. BULLOCK, Chicago, and HARRY S. LLOYD, Oak Park, Ill. Filed July 15, 1919. Serial No. 310,968. 1 Claim. (Cl. 51—209.)



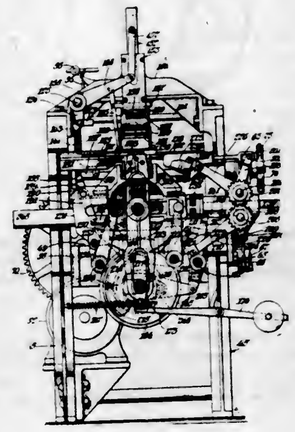
An abrasive disk for disk grinders comprising a fabric disk and a layer of abrasive particles bound together and to the fabric by magnesium chlorid and magnesite, the ratio of magnesium chlorid to magnesite being higher in the fabric than in the layer of abrasive material.

1,351,022. CONTROL APPARATUS. ANDREW H. CANDEE, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1915. Serial No. 65,687. 9 Claims. (Cl. 200—50.)



2. In a controller, a contact drum having a central position and an off position on each side of said central position, a switch, a controller handle provided with means for preventing the operation of said switch unless said drum is one of said off positions and for locking said controller in an off position.

1,351,023. CONTROLLER FOR SMALL MOTORS. JOSEPH L. CHANTEMERLE, Turtle Creek, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1918. Serial No. 211,763. 6 Claims. (Cl. 219—48.)

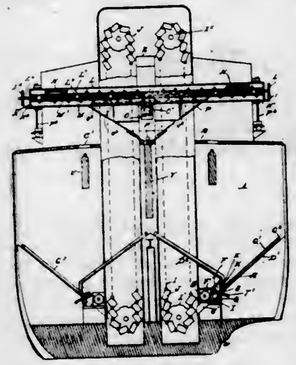


1. In an adjustable rheostat, the combination with a revolubly mounted resistor, and stationary contact fingers adapted to coact therewith, of a pedal member operatively connected to said resistor and adapted for movement in one plane only.

1,351,024. LABELING-MACHINE. SIMON COOPER, Brooklyn, N. Y., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1918. Serial No. 255,955. 8 Claims. (Cl. 216—54.)

1. In a labeling machine, the combination with a package support, of a label receptacle in spaced relation thereto; a label pasting and transferring element including a member having a paste and label receiving surface normally positioned adjacent the package support; means, including a carrier, for moving said element between the said support and receptacle; a source of paste supply; a body movable in a plane between the said source of supply and the path of said member; a paste-applying roll resiliently supported on said body; means for actuating said body to position the paste-applying roll in the path of the receiving surface of said member during the travel of the latter toward the label receptacle; means for independently moving the said element to present the paste bearing surface thereof to a label in the receptacle, and for permitting said member, with the label attached thereto, to return to its normal position; and means on said body for stripping the label from said member and applying it to a package on said support.

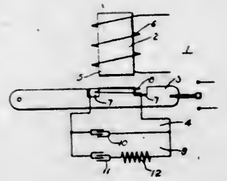
1,351,025. PACKAGE-WRAPPING MACHINE. SIMON COOPER, Brooklyn, N. Y., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1918. Serial No. 255,956. 30 Claims. (Cl. 93—2.)



1. In a wrapping machine, the combination of means for supporting and feeding a row of boxes, including a bottom member for temporarily supporting successive groups of said boxes, and spring-pressed side strips spaced apart and arranged above said member so as to embrace and grasp the boxes, means for moving said member into and from its supporting position, a box and wrapper support below said member, means for vertically-reciprocating said support in respect to said member, means for supplying wrapper material to said suport and in position thereon to receive the boxes when they are released by said member, and pressure means for acting upon and depressing the released boxes.

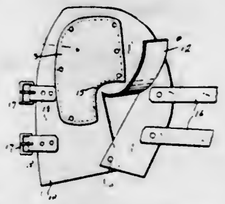
17. In a wrapping machine, the combination with a wrapper-and-article support, and means for vertically-reciprocating the same, of a turret having a central space and a series of spaced apart open receptacles extending radially outward therefrom, and means for intermittently rotating said turret to position the receptacles successively within the path of the support, whereby said support is reciprocated through the successively positioned receptacles and in its downward movements enters the common space connecting the receptacles.

25. In a wrapping machine, the combination with means for supporting a partially wrapped package having end-projecting wrapper portions, of wrapper folding mechanism comprising opposed pairs of pivotally-mounted members, means for simultaneously swinging the pairs of members toward or from each other at the respective ends of the package, whereby the upper and lower projecting portions of the wrapper at each end thereof are simultaneously folded toward each other, and means operative to bear against and insure the proper positioning of the package preparatory to the folding action of the said members.



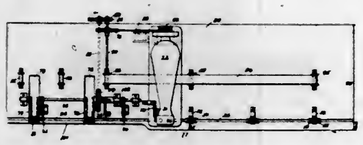
1,351,026. CARGO-STORAGE FOR BOATS AND UNLOADING MECHANISM THEREFOR. STANFORD T. CRAPO and JOSEPH R. JENKINS, Detroit, Mich., assignors to Huron Portland Cement Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1917. Serial No. 195,304. 6 Claims. (Cl. 214—15.)

1. In a boat, a hold for containing dry comminuted material, a discharge spout therefor, a series of pipes adjacent to the bottom of said hold having a plurality of



spaced holes for the exit of air, and a fabric covering for said pipes.

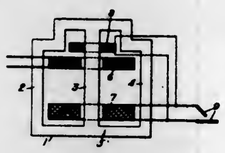
1,351,027. RELAY. DAVID C. DAVIS, Wilkinsburg, and CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1918. Serial No. 240,286. 11 Claims. (Cl. 175—338.)



1. A relay comprising an electromagnetic actuating means, an armature therefor, means inductively related to the actuating means for controlling the operation of the armature and a resonant circuit connected to said means.

1,351,028. HANDSHIELD FOR RIVETERS. JAMES P. DONOVAN, Quincy, Mass. Filed Feb. 17, 1919. Serial No. 277,533. 2 Claims. (Cl. 2—104.)

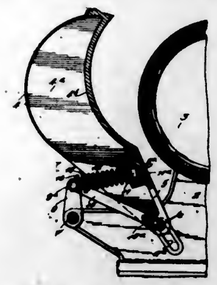
1. A hand shield of the character described comprising a blank of flexible material adapted to be longitudinally folded to extend over the back and palm of the hand and embrace the first and second fingers, straps attached to the margins of the blank whereby it may be held upon the hand, the blank being longitudinally slitted at two points to provide a tongue, the margins defining said tongue being brought together at the base of the blank and overlapped to thereby provide a thumb opening, and a hollow thumb piece attached to the blank and extending therefrom, said tongue extending upward through said thumb piece.



1,351,029. APPARATUS FOR SEWING-MACHINE CONSTRUCTIONS. ALEXANDER EIG, New York, N. Y. Filed Apr. 3, 1919. Serial No. 287,120. 16 Claims. (Cl. 112—2.)

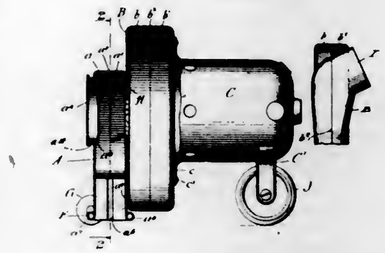
1. In an apparatus of the kind described, the combination of a sewing-machine having a needle, a longitudinal guideway located at one side of the path of the needle, a longitudinal fabric carrier traveling in said guideway to draw material to be sewed across the path of said needle whereat the sewing operation is accomplished, and mechanism for automatically removing the fabric carrier from said guideway.

8. In an apparatus of the kind described, the combination with a longitudinal work-table having a guideway extending lengthwise thereof, a sewing-machine disposed transversely of the table and provided with a needle working at one side of the guideway and with a feeding plate oscillating therein, train coupled carriers slidable in the guideway and consisting each of top and bottom members between which material to be sewed may be held, said carriers having on their under surfaces means on which the oscillating plate may act to cause the travel of the carriers through the guideway, each carrier at it advances drawing its material across the path of the needle whereat the sewing is effected, means yieldingly bearing on the top members of the carriers to prevent the displacement of the material, mechanism for automatically severing the threads between the materials held by successive carriers, automatically operated mechanism for uncoupling the carriers and removing them individually from the guideway, and mechanism for automatically returning the individual carriers to a convenient place for the next operation.



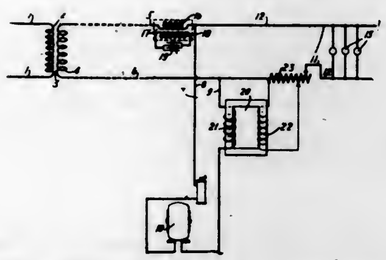
1,351,030. ARC-WELDING SYSTEM. HANS FAHNOE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,411. 7 Claims. (Cl. 219—15.)

1. In an arc welding system, a transformer comprising core member, a plurality of windings mounted thereon including primary and secondary windings and an auxiliary winding, the primary winding being adapted to be connected to a source of alternating current, the secondary winding being connected to a plurality of electrodes and the auxiliary winding being connected in parallel relation to the secondary.



1,351,031. IRONING-MACHINE. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1916. Serial No. 127,246. 15 Claims. (Cl. 68—9.)

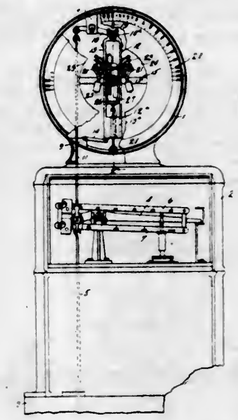
1. In an ironing machine, the combination of a roll, a coacting shoe, mountings for said shoe permitting the shoe to turn into and out of contact with the roll in normal operation about a pivotal axis that is beyond the roll-contacting surface of the shoe and permitting the rearward



displacement of said shoe bodily from said normal-operation-position, and means for controlling the rocking of the shoe pivotally and for bodily displacing it as aforesaid.

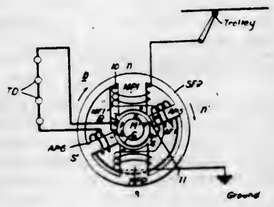
1,351,032. VACUUM-CLEANER. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1916. Serial No. 136,602. 3 Claims. (Cl. 15—60.)

1. A vacuum cleaner structure comprising a nozzle casing and a fan casing secured together, the former casing having a bottom nozzle opening whose front edge is rolled into a tube, a rod passing into such tube and supporting a roller on the end of the rod.



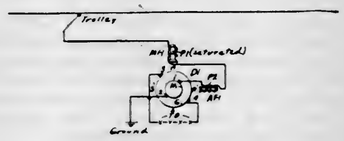
1,351,033. SYSTEM OF DISTRIBUTION. CHARLES LE GEYT FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 4, 1915. Serial No. 65,082. 7 Claims. (Cl. 171—119.)

1. The method of maintaining the voltage impressed upon one branch circuit of a composite load circuit constant and in phase with the voltage impressed on the load circuit which consists in impressing upon said branch circuit an electromotive force that is in phase with the current flowing in the mains of the composite load circuit and substantially in proportion to the current delivered to a second branch circuit, and impressing an electromotive force on the load circuit that is opposite in phase to the reactive voltage drop obtaining in the load circuit.



4. In a system of electrical distribution, the combination with a main circuit, a branch circuit requiring varying amounts of power connected thereto, and a second branch circuit requiring a constant electromotive force, of means inserted in the main circuit for compensating for the reactive drop therein, and means influenced by the varying currents flowing in said first branch circuit for impressing upon said second branch circuit an electromotive force to automatically compensate for the ohmic drop in the main circuit caused by the current of the first branch circuit.

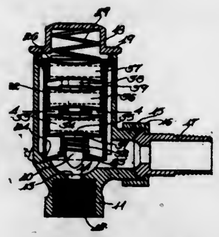
1,351,034. WEIGHING-SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 23, 1916. Serial No. 127,283. 10 Claims. (Cl. 265—62.)



1. In a weighing scale and in combination with the indicating mechanism thereof, a vertically movable frame, oppositely-disposed pendulums carried by said frame and adapted to be rocked upon movement of the frame, means adapted to retain said frame in a true vertical position during its entire movement, and means carried by said pendulums for actuating the indicating mechanism.

1,351,035. DYNAMO-ELECTRIC MACHINE. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1915. Serial No. 66,725. 5 Claims. (Cl. 171—123.)

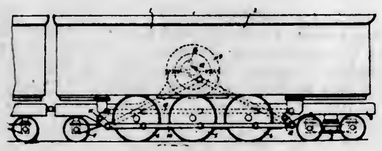
4. In a dynamo-electric machine, the combination with a rotor having a high voltage and a low voltage winding and a commutator for each of these windings, of a plurality of spaced sets of brushes for said commutators, a stator frame having a plurality of polar projections and a plurality of sets of field windings to excite said projections and the rotor, means whereby the excitation of one of the sets of field windings is changed so as to increase the total voltage induced in the low-voltage winding without substantially changing the total field flux between the commutating coils of the high-voltage winding.



1,351,036. DYNAMO-ELECTRIC MACHINE. RUDOLF E. HELLMUND, Pittsburgh, and RALPH E. FERRIS, Swissvale, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 8, 1916. Serial No. 96,051. 2 Claims. (Cl. 171—123.)

1. In a dynamo-electric machine, the combination with a rotor having a plurality of commutators, of a plurality of spaced sets of brushes for said commutators, and a stator having pairs of main and of auxiliary polar projections of the same sign disposed intermediate certain corresponding brushes, one of said pairs of projections being normally saturated so as to emit a substantially constant flux.

2. In a dynamo-electric machine, the combination with a rotor having a motor and a generator commutator, of a stator having pairs of main and of auxiliary polar projections of the same sign disposed intermediate certain corresponding brushes, one of said pairs of projections being normally saturated so as to emit a substantially constant flux, the forward or toe portions of the brushes for the motor commutator being disposed adjacent to said saturated polar projections.

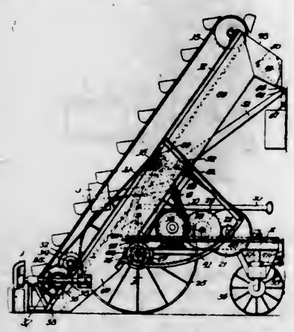


1,351,037. STEAM-TRAP FOR RADIATORS. GEORGE D. HOFFMAN, Pasadena, Calif., assignor to Hoffman Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1915. Serial No. 36,859. 6 Claims. (Cl. 236—58.)

1. A steam trap comprising a casing provided with a valve seat at one end, and an abutment contiguous thereto, a cap removably engaging the other end of the casing, a cage removably supported within said casing independently of the valve seat and of the cap, a thermostatic motor inclosed within said cage, a valve coöperating with said seat, said valve being movable independently of the motor and guided by the cage, a spring acting to move the valve away from its seat, said cage, motor, valve, and spring constituting a single unitary

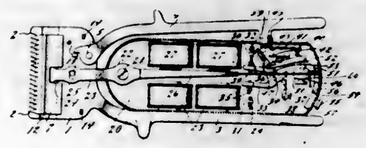
structure, said motor acting to move the valve to its seat, and a spring interposed between the cap and the cage to hold the latter yieldably in operative position.

1,351,038. LOCOMOTIVE. GEORGE H. F. HOLY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 2, 1917. Serial No. 151,946. 11 Claims. (Cl. 105—120.)



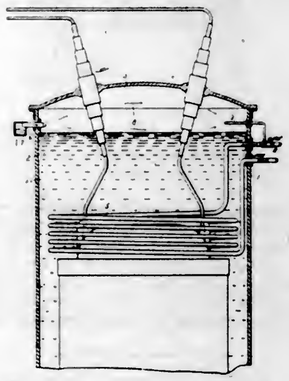
1. In an electric locomotive, the combination with a plurality of driving wheels and electric motors disposed above the driving wheels, of means for transmitting the driving effort of the motors to the driving wheels, said means comprising inclined motor rods disposed in a central vertical plane of the locomotive.

1,351,039. ELECTRIC LOCOMOTIVE. GEORGE H. F. HOLY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1918. Serial No. 227,430. 10 Claims. (Cl. 105—175.)



1. A vehicle comprising a plurality of single frame rigid wheel base trucks, a portion of said trucks being equipped with two or more center pins for maintaining pivotal connection with vehicle bodies mounted on said trucks, and having articulation links for connecting adjacent trucks whereby the draft strains are transmitted through said trucks.

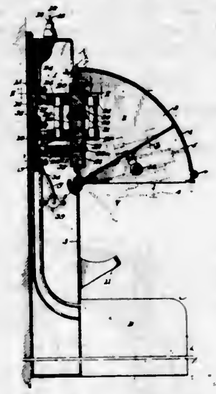
1,351,040. WAGON-LOADING APPARATUS. WILLIAM T. JAMES, Chicago, Ill. Filed July 26, 1915, Serial No. 41,829. Renewed Dec. 11, 1918. Serial No 266,320½. 3 Claims. (Cl. 37—29.)



1. A wagon loading apparatus comprising, in combination, a conveyer, buckets on said conveyer, a pair of members arranged immediately in front of and to the sides of said conveyer adapted to move transversely with respect to the conveyer and move the material rearwardly with respect to the conveyer and lift it directly into the buckets of the conveyer.

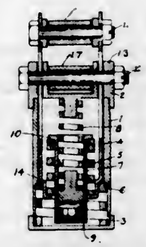
1,351,041. CONVERTIBLE HAIR-CLIPPER. JOHN N. JOHNSON, Albuquerque, N. Mex. Filed Dec. 16, 1919. Serial No. 345,199. 16 Claims. (Cl. 30—1.)

1. A clipper comprising relatively movable cutter plates, power operated means for producing relative movement of the plates, manually operated means for also producing relative movement of the plates, and means for selectively rendering the manually operated means, effective or ineffective in producing relative movement of the plates.



1,351,042. SYSTEM OF VENTILATION FOR TRANSFORMERS. CARL G. JONES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1917. Serial No. 184,237. 5 Claims. (Cl. 175—361.)

1. The combination with a closed container partially filled with a gas-evolving liquid, of a coil for circulating cooling fluid within said container, means for utilizing said cooling fluid to eject the air-and-gas mixture that forms above said liquid and for introducing air into the space above said liquid.



1,351,043. ELECTRIC SWITCH AND FUSE BOX. LAWRENCE F. KAIES, Baltimore, Md., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 9, 1917. Serial No. 167,398. 10 Claims. (Cl. 200—114.)

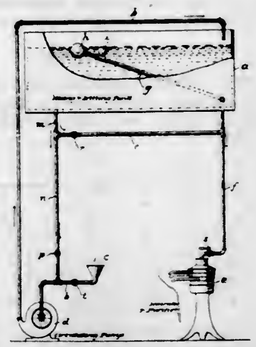
8. The combination with a casing having an opening and a door for the opening, of customers' fuses within the casing accessible only when the door is open, load-limit fuses within the casing, a switch within the casing, and means in the casing for rendering the load-limit fuses

and the switch inaccessible through said opening in all positions of the door.

1,351,044. COMPOUND SHOCK-ABSORBING SPRING. ALBERT S. KUX, Chicago, Ill. Filed Oct. 7, 1915. Serial No. 54,687. 18 Claims. (Cl. 267—29.)

1. In a device of the class described, the combination with hanger members, of two compression springs arranged in series between said hanger members, one spring coiled within the other and spaced therefrom, means for connection between said two springs comprising a tube having an outward extending flange on its upper end and a screw nut on its interior at its lower end, and a third coiled compression spring always under tension arranged to counteract or take up the recoil of said first named springs.

1,351,045. SPOON AND FORK COMBINED. ALBERT LARSON, Lucan, Minn. Filed Dec. 30, 1919. Serial No. 348,431. 5 Claims. (Cl. 30—22.)



5. A basting spoon or other spoon having its bowl divided longitudinally into a rigid middle member and two side members, the latter arranged to spread with their front ends away from the middle member, and means for spreading and holding spread the side members when so desired.

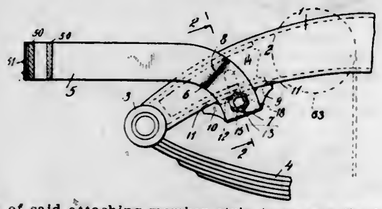
1,351,046. SPOON AND FORK COMBINED. ALBERT LARSON, Minneapolis, Minn. Filed Apr. 16, 1920. Serial No. 374,486. 3 Claims. (Cl. 30—22.)

1. A combined spoon and fork comprising a handle and extending forward from the handle a central middle tine and a short distance therefrom provided with lateral lugs, two side tines having rigid shanks pivoted to the lugs and normally diverging rearward of the pivots, an operating rod guided to slide upon the handle and having at its front end a crosshead with apertures for said shanks, and means for holding the slide in any desired position.

1,351,047. PROCESS FOR CLEANING GASOLENE. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to the De Laval Separator Company, a Corporation of New Jersey. Filed Sept. 23, 1918. Serial No. 255,348. 12 Claims. (Cl. 196—26.)

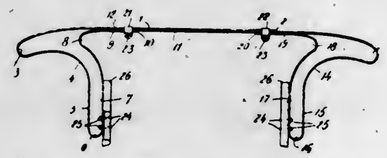
2. The process of purifying used dirty and watery gasolene which comprises adding thereto a saponifying agent, and destroying the resultant emulsion of soap, water and gasolene by applying mechanical force to divide its constituents into a layer consisting of the entire content of gasolene in a pure condition and other layers containing soap, water and dirt unmixed and unemulsified with gasolene, and separately withdrawing the gasolene for re-use.

1,351,048. DIE. BURNS D. LOCKWOOD, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 15, 1919. Serial No. 290,289. 21 Claims. (Cl. 113—49.)



1. A die for shaping metal plates having a hardened pressing face portion comprising granular base materials and a medium for binding said materials together, said face portion being heat resisting.

1,351,049. RETAINER-ATTACHER FOR VEHICLE-BUFFERS. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Nov. 1, 1919. Serial No. 335,052. 23 Claims. (Cl. 293—55.)



11. In attaching devices adapted for use in attaching an automobile buffer or the like to an automobile frame

members having projecting flanges, an attaching member of steel strip having a downwardly bent portion to form a substantially flat bearing member to coöperate with the web of a frame member, an inturned bent portion on said attaching member formed with a bolt socket, and having its inturned upwardly extending end bifurcated to form alining supporting members on either side of said bolt sockets and separated to a greater extent than the

width of said attaching member strip to engage the lower flange of said frame member, and a coöperating hook bolt having a shank extending through said bolt socket and having a hook end extending around the lower flange of said frame member and engaging the inner surface thereof to insure reliable connection between these parts with a minimum of lateral and longitudinal extent of the attaching device adjacent the lower part of the frame member.

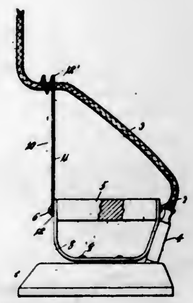
1,351,050. LOOPED-ATTACHER AUTOMOBILE-BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Jan. 14, 1920. Serial No. 351,283. 12 Claims. (Cl. 293—55.)

4. The automobile buffer comprising two generally similar resilient strip elements each having an impact receiving member, and a connected outer end loop and attaching member having an attacher loop and a securing portion adapted to be secured to the automobile frame member, said securing portion having a connector portion adapted to be secured to the coöperating impact receiving member.

1,351,051. METHOD OF MAKING SOUND BRASS CASTINGS. LEON MCCULLOCH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,537. 5 Claims. (Cl. 22—215.)

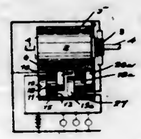
1. The method of making sound castings of copper or copper alloys which comprises oxidizing and consequently removing absorbed hydrogen from the molten metal prior to casting.

1,351,052. VEHICLE-WHEEL. COLIN MACBETH, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, Westminster, London, England. Filed Nov. 14, 1919. Serial No. 338,003. 8 Claims. (Cl. 301—64.)



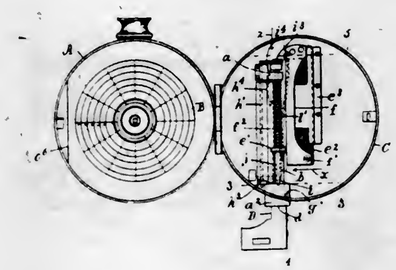
1. A metal vehicle wheel comprising a hub, a rim, and oppositely dished spoke members extending between the hub and rim and adapted to be expanded radially under the action of pressure applied in the direction of the length of the wheel axis, the contacting surfaces of the spoke members and rim being of such form that there may be a slight, relative, transverse rocking between said parts as the spoke members are expanded.

1,351,053. SECTIONAL SCAFFOLD. JOHN J. MACKLEM, Goshen, Ind. Filed Oct. 15, 1919. Serial No. 330,822. 5 Claims. (Cl. 304—3.)



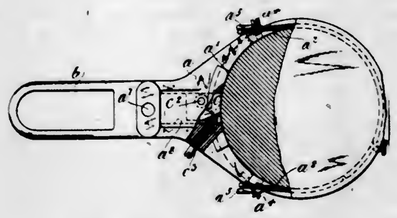
1. In a scaffold including a plurality of superposed ladder sections spaced apart in pairs, side sway braces detachably connecting members of said pairs and including a slotted brace beam, slotted, diagonally disposed arms pivotally connected at one end to said beam, and short U-irons slidably mounted in the slots of the brace beam, and long U-irons slidably mounted in the slots of the pivoted diagonally disposed arms.

1,351,054. ELECTRIC SADIRON. EDWIN MILLER, Hartford, Conn. Filed Jan. 19, 1920. Serial No. 352,467. 1 Claim. (Cl. 219—25.)



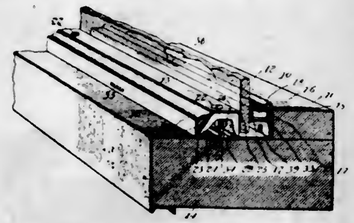
An article of manufacture for use in connection with an electric sad iron and to function as a wire support, comprising an elongated shank having an eye at one end, to receive a screw by which it may be attached to the iron, and also having at the other end a plurality of coils into which the supply wire of the iron may be threaded, the coils being adapted to surround and support said supply wire.

1,351,055. ELECTRIC REGULATION. GEORGE G. MILNE, Rye, and JOHN L. CREVELING, White Plains, N. Y., assignors to Gould Coupler Company, a Corporation of New York. Filed Feb. 17, 1917. Serial No. 149,222. 11 Claims. (Cl. 171—313.)



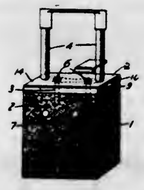
1. In a dynamo having an armature and field exciting means, a plurality of means for regulating the dynamo by independently diverting the field away from said armature and responsive independently to voltage and current, respectively.

1,351,056. WATCHMAN'S TIME-DETECTOR. PAUL MOOSMANN, Brooklyn, N. Y. Filed June 1, 1916. Serial No. 101,015. 14 Claims. (Cl. 234—39.)



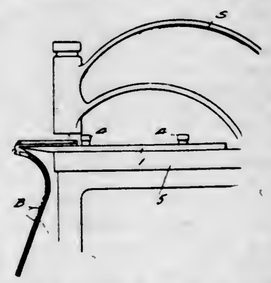
6. In a watchman's time detector, the combination, with a lock having a sleeve held stationary therein, of a spindle movable concentric with the said sleeve, a stop connected with the spindle to obstruct the rotation of the key, and a key having means within its barrel adapted to engage the spindle and remove the stop from the path of the key-ward.

1,351,057. PISTON-GROOVE TOOL. LOUIS DE F. MUNGER, Springfield, Mass. Filed Nov. 14, 1917. Serial No. 201,901. 11 Claims. (Cl. 82—4.)



1. Apparatus for cutting grooves in the periphery of circular stock comprising a support adapted to encircle the stock, a grooving tool projecting inwardly from the support, and a plurality of guides projecting inwardly from the support in spaced relationship therearound, the guides being adapted to extend into an annular slot in the stock and having lateral bearing surfaces adapted to position the apparatus axially of the stock.

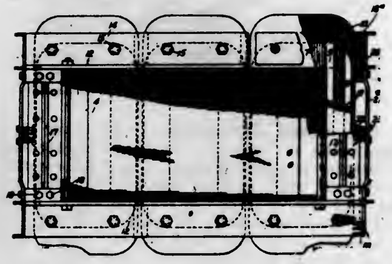
1,351,058. GLASS-SECURING DEVICE. DANIEL J. MURNANE, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed July 30, 1917. Serial No. 183,487. 8 Claims. (Cl. 189—78.)



8. In a window glass setting, a support for the glass, a sheet metal sill covering, securing means for said support passing through openings in said sill covering and into the sill, said openings being in the form of slots wider than the dimensions of the said securing means to afford limited adjustment in position of said support and securing means both longitudinally and laterally on said sill covering and having their edge walls punched up to prevent the entrance of drainage water.

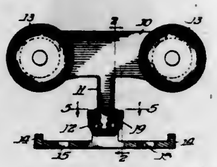
1,351,059. SHUNT ATTACHMENT FOR BRUSHES. FRANK D. NEWBURY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 6, 1917. Serial No. 178,929. 5 Claims. (Cl. 171—326.)

2. The combination with a current-collecting brush and a lead therefor, of means for attaching said lead to said brush comprising a contact plate mounted in engagement with said brush and provided with members enveloping the ends of said leads and an additional plate mounted on top of said enveloping members.



1,351,060. BOOKBINDING-MACHINE ATTACHMENT. JOHN P. NORMANN, Crookston, Minn. Filed Apr. 2, 1917. Serial No. 159,192. 1 Claim. (Cl. 1—4.)

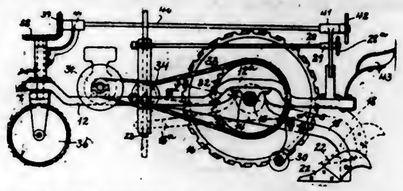
The combination with a machine of the class described including a supporting table having a stationary anvil thereon and an arm carrying a stapler, of a plate bearing upon said table and having a beveled edge extending be-



yond the outer edge of the same, said plate being provided with an opening positioned constantly beneath the stapler upon the anvil, and means for adjustably supporting the plate upon the table.

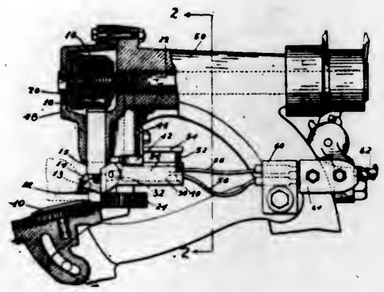
1,351,061. TRANSFORMER. JOHN F. PETERS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1917. Serial No. 163,006. 6 Claims. (Cl. 175—356.)

3. In a polyphase transformer, a three-legged core member, groups of rectangular coils, each of the core legs being embraced by a coil group but only the middle coil group having all its sides embraced by the core, and bracing means surrounding, and forming a box-like inclosure for, the coil edges and faces of those coil groups which are not embraced by the core.



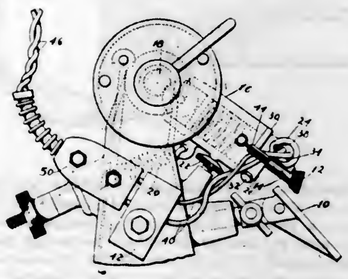
1,351,062. DOOR-HANGER. GEORGE RHINES, Danville, Ill., assignor to Allith Prouty Company, Danville, Ill., a Corporation of Illinois. Filed May 5, 1917. Serial No. 166,539. 2 Claims. (Cl. 16—90.)

1. A slidable door hanger, consisting of a wheeled carriage and a door member, one of said members having an upright shank provided with a cross-head extending in the direction of the path of travel of the carriage, said head having face portions sloping transversely in opposite directions from a median line extending longitudinally of the head, the other member having a continuous stirrup provided with a slot of a size to receive the cross-head therethrough, the cross-head lying transversely of the slot with its sloping portions in coöperative relation with the inner walls of the stirrup, there being a contact engagement between the head and the stirrup in the direction of the length of the head to prevent relative tilting of the members in the direction of said contact.



1,351,063. FARM IMPLEMENT. JAMES E. RICH, Springfield, Mass., assignor to Liberty Ignition Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1919. Serial No. 333,440. 4 Claims. (Cl. 97—50.)

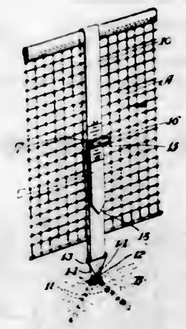
1. A farm implement, comprising a frame having a transverse axle, a wheel journaled to rotate on said axle and supporting a portion of the frame, a draft beam mounted to oscillate on a center formed by said axle, and extending rearwardly and downwardly therefrom, a working member carried by said draft beam, a lever fixed to and constituting a forwardly projecting extension of the



draft beam, and manually operable means carried by the frame for swinging said lever to raise and depress the draft beam and the working member carried thereby, said means being organized to counteract lifting pressure exerted on the working member.

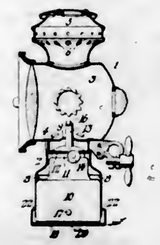
1,351,064. WELT-INDENTING MACHINE. JOHN H. RIGBY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 24, 1916. Serial No. 73,884. 12 Claims. (Cl. 12—78.)

4. A machine for operating upon the marginal portions of shoe soles having, in combination, a support for a shoe, a movable tool comprising a carrier and a working element carried thereby for acting upon the shoe stock, a contact block for engaging the carrier movably mounted adjacent said carrier, means for yieldingly holding said block in engagement with the carrier during its movement, and means to heat the block.



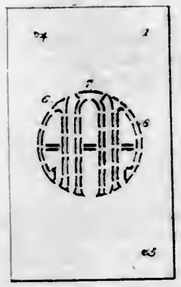
1,351,065. MACHINE FOR OPERATING UPON SHOE-SOLES. JOHN H. RIGBY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 10, 1916. Serial No. 77,395. 8 Claims. (Cl. 12—78.).

2. A machine for operating upon the marginal portions of shoe soles having, in combination, a support for a sole,



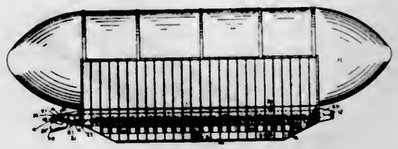
a tool comprising a carrier and a working element on said carrier for burnishing the edge of a sole, a bushing for guiding the carrier in its movements, a heating member fixed on said bushing and having a sliding contact with the carrier, means to heat said member, and mechanism operating upon the end of the carrier to rapidly reciprocate it through said bushing and across the face of the heating member in a direction transverse to the edge of the sole operated upon.

1,351,066. TENNIS-NET APPLIANCE. CHARLES A. ROBINSON, East Orange, N. J. Filed Nov. 9, 1918. Serial No. 261,758. 9 Claims. (Cl. 46—24.)



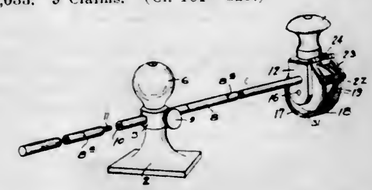
1. A tennis-net appliance comprising a flexible element adapted to be applied to a net, a chain of links adapted to be embedded in the ground to constitute a ground anchor, and means for connecting said element with the body of the chain at a point between the ends of the latter.

1,351,067. LANTERN. EDWIN M. ROSENBLUTH, Wallingford, Pa. Filed Sept. 18, 1918. Serial No. 254,540. 14 Claims. (Cl. 240—50.)



1. In a lantern, the combination with a casing, including a lamp chamber in the lower portion thereof; of a lamp in said chamber; diametrically opposite projections at the lower edge of said casing; a bottom cap for said casing, formed of a single piece of resilient sheet metal, having a unitary spring bottom with a raised central portion to uphold said lamp, and an inwardly turned annular spring flange, having a notch to pass one of said projections, but adapted to overhang and engage both said projections; an inwardly and downwardly extending stop projection on said cap at one side of said notch; and an inwardly and downwardly extending locking projection on said flange; whereby said lamp may be locked in coöperative relation with said casing, prevented from accidental displacement, and prevented from rattling, by said cap.

1,351,068. STENCIL-CARD AND METHOD OF STENCILING MONOGRAMS. FRANK M. SAYFORD, Brooklyn, N. Y. Filed Dec. 18, 1919. Serial No. 345,752. 4 Claims. (Cl. 101—127.)

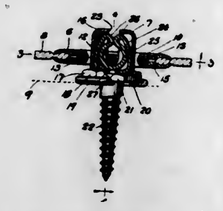


1. A stencil comprising a card having a plurality of forms of the same letter of the alphabet thereon arranged in the form of a monogram.

1,351,069. AERONAUTICAL APPARATUS. HENRY W. SCHMIDT, New York, N. Y. Filed Jan. 6, 1919. Serial No. 269,737. 2 Claims. (Cl. 244—10.)

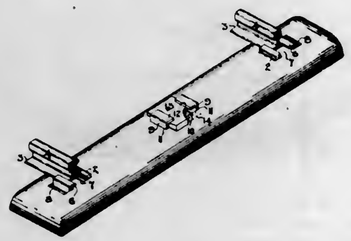
1. In an apparatus of the class described, a lighter-than-air superstructure, an aerofoil, immediately beneath the same, a car beneath said aerofoil, means for drawing air at the front of said apparatus through said car and from between said superstructure and aerofoil through the latter and for discharging said air beneath said aerofoil.

1,351,070. MARKING DEVICE. WALTER T. SEITZ, Pittsburgh, Pa. Filed Feb. 20, 1920. Serial No. 360,033. 9 Claims. (Cl. 101—329.)



1. A marking device comprising a rotary marking wheel and means for revolubly moving the said wheel in a circular path.

1,351,071. RECORDING DEVICE. ALEXANDER SILVERMAN and ROSWELL H. JOHNSON, Pittsburgh, Pa. Filed June 7, 1918. Serial No. 238,797. 5 Claims. (Cl. 234—1.)



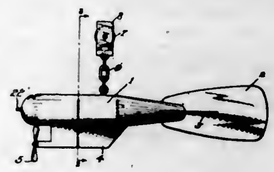
1. The method of producing records which consists in treating a suitable record sheet or strip chemically to render the same susceptible to change under the influence of heat and causing a heated member to travel in contact with said sheet, whereby a contrasting record line is produced on the surface of the sheet.

1,351,072. SPRING-CATCH DEVICE. JOSEPH SOSS, New York, N. Y. Filed Sept. 20, 1919. Serial No. 325,111. 7 Claims. (Cl. 24—214.)

1. A device of the class described comprising an eyelet provided with a cross bar centrally of the aperture of said eyelet, a stud member comprising a hollow portion and a spring in said hollow portion, said hollow portion being provided with a transverse aperture through which the cross bar of the eyelet is adapted to pass and operate in connection with the spring within said hollow portion.

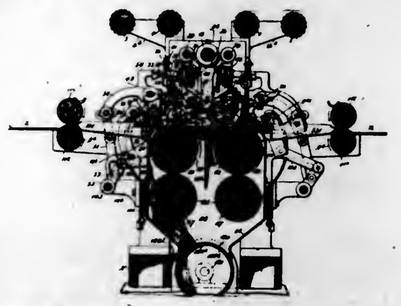
1,351,073. RAIL-FASTENING DEVICE. DIRK ANDRIES TENGE, Krugersdorp, Transvaal, South Africa. Filed Mar. 25, 1919. Serial No. 285,058. 3 Claims. (Cl. 238—348.)

1. A hollow sleeper provided with means toward each end for engaging the inner sides of the bases of rails carried by the sleeper and formed with a central aperture, a tie bar for each rail having a hooked end engaging the outer side of the base of the rail and the underlying part of the sleeper; each of said tie bars having the other end turned upward and engaged in the aperture in the sleeper.



1,351,074. CONDENSER. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 15, 1917. Serial No. 175,047. 8 Claims. (Cl. 250—41.)

1. An electric condenser unit including superimposed layers of conducting material having a dielectric comprising montan wax disposed between the adjacent layers.



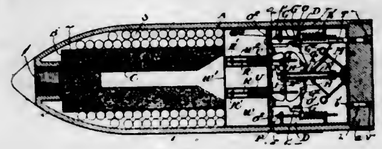
1,351,075. TOY. EDWARD W. TRAUTMAN, Long Beach, Miss. Filed Oct. 22, 1919. Serial No. 332,375. 3 Claims. (Cl. 46—40.)

1. A toy of the character specified comprising a vessel having guiding planes, a pulley connected with the vessel and adapted to run upon a cord connected at one end to a fixed object, a double swivel connection between the pulley

and the vessel, said vessel having means for exploding a torpedo or cap by contact of the toy with the fixed object.

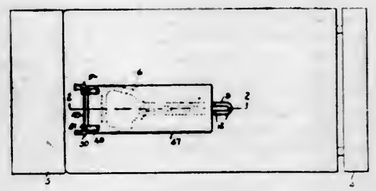
1,351,076. COMBING-MACHINE. HARRY TUNSTALL, Fairhaven, Mass., assignor to Alsatian Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1918. Serial No. 257,089. 44 Claims. (Cl. 19—6.)

11. The machine above described comprising two pairs of lap-combing mechanisms and two pairs of nipper mechanisms, each located in operative relation to one of said combing mechanisms, means for mounting said nipper mechanisms whereby they may be oscillated independently, a main shaft, and means operated by said main shaft to cause each nipper mechanism in turn to present its lap to the combining mechanism.



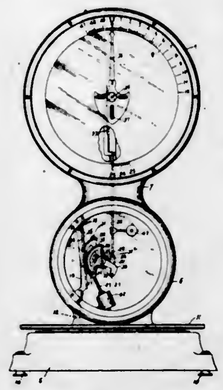
1,351,077. COMBING-MACHINE. HARRY TUNSTALL, Fairhaven, Mass., assignor to Alsatian Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 29, 1919. Serial No. 334,226. 3 Claims. (Cl. 19—6.)

2. In a combing machine, as a means for feeding the sliver, in combination, a cushion plate and a feed roll adapted to press the sliver against, and feed it over, said cushion plate, the feeding surface of said cushion plate being glazed in character, whereby the fibers will be discharged from said cushion plate in the same relation to each other as when received upon it.



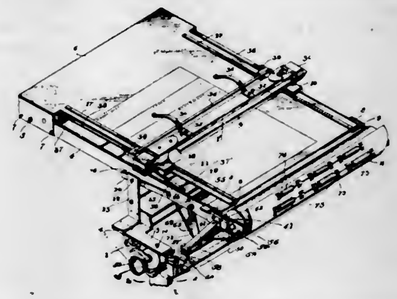
1,351,078. EXPLOSIVE SHELL. WILLIAM L. WALKER, New York, N. Y. Filed Jan. 10, 1917. Serial No. 141,691. 16 Claims. (Cl. 102—29.)

1. In a shell, a supply of material susceptible of generating explosive gas when exposed to a reagent, and a reservoir adapted to receive and contain a supply of said reagent, said reservoir being separated from the gas-



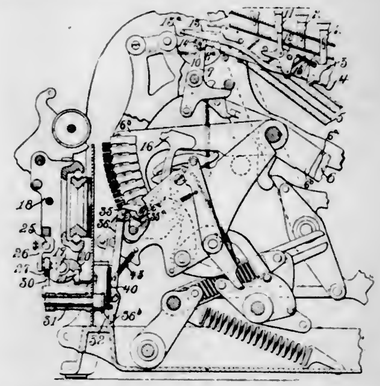
generative material by a solid wall, and means to puncture said wall, to admit the reagent to contact with said material.

1,351,079. SHIRT-FOLDING TABLE. CHARLES E. WAREAM, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 24, 1918. Serial No. 246,506. 12 Claims. (Cl. 223—15.)



1. A shirt folding table, including a shirt receiving bed provided with a recess, and an expansible neck band former in said recess.

1,351,080. AUTOMATIC WEIGHING-SCALE. LEWIS C. WETZEL, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed July 5, 1916. Serial No. 107,719. 5 Claims. (Cl. 265—37.)



1. In a scale, a platform, a casing, indicating mechanism including a pinion rotatably mounted within the casing, guide tracks carried by the casing, a pendulum suspended within the casing and adapted to contact with said tracks, a connection between the pendulum and platform, a rack rod carrying a rack meshing with said pinion, and means for pivotally connecting said rack rod to said pendulum and for adjusting the effective length of said rack rod.

1,351,081. COLLATING DEVICE FOR TYPEWRITERS. JOHN ASHLAND WHERRY, New Orleans, La. Filed Oct. 15, 1918. Serial No. 258,146. 18 Claims. (Cl. 197—127.)

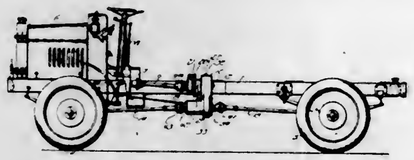
1. The combination with a platen which is bodily movable to and from operative position, of a collating board connected at one of its ends to the platen and movable with it to assume substantially vertical and horizontal positions, said collating board being pivotally supported intermediate its ends and means for actuating the platen when in operative position, said means being disengageable from the platen to permit the latter to be swung forwardly and upwardly to its inoperative position with the collating board face upward.

1,351,082. ADDING-MACHINE. ROY E. WING, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 6, 1916. Serial No. 135,455. 12 Claims. (Cl. 235—60.)

1. The combination with a plurality of sets of depressible keys, detents for holding down selected keys of the different sets, automatic mechanism for tripping the detents to release the keys, and means for causing the detent-engaging member: of said mechanism to idly pass a certain detent or detents leaving the same in action when tripping the balance of the detents.

8. The combination with a laterally shiftable paper carriage and stops for setting it at different columnar positions, and type-carriers and impression-making means; of devices controlled by the carriage and operating to disable part of the impression-making means.

1,351,083. WINDOW. FRANCIS A. WINSLOW, Chicago, Ill. Filed Apr. 15, 1912. Serial No. 690,722. Renewed May 12, 1916. Serial No. 97,182. 9 Claims. (Cl. 189—67.)

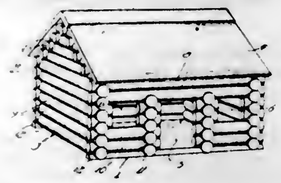


1. A window comprising a frame and a pair of sashes located normally in the same vertical plane with each

other and capable of being bodily raised and lowered in said frame, the upper sash having at its top and the lower sash having at its bottom means for engagement with the sides of the frame, in combination with a balance lever pivoted between its ends to the frame and at its ends

to the upper and lower sashes respectively remote from their ends so that when the upper sash is in the uppermost position and the lower sash is in its lowermost position the bottom of the upper sash engages the top of the lower sash and guiding means for said sashes.

1,351,084. DIFFERENTIAL-DRIVE MECHANISM. ANTHONY WINTHER, Kenosha, Wis., assignor to Marwin Truck Corporation, Kenosha, Wis., a Corporation of Delaware. Filed Oct. 22, 1919. Serial No. 332,494. 11 Claims. (Cl. 180—44.)

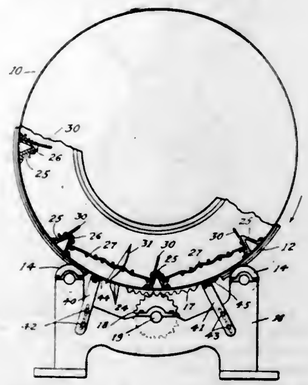


1. In a device of the character described, the combination of a primary driven shaft, a plurality of secondary driven shafts, one of said secondary shafts having positive driving connection with said primary driven shaft and normally in driving connection with the other of said secondary shafts, clutch members interposed between said secondary driven shafts and adapted to automatically disengage the last mentioned secondary shaft when the speed of rotation thereof exceeds the speed of rotation of the positively driven secondary shaft.

1,351,085. FIRE-FIGHTING APPARATUS. JAMES C. WITT, Cairo, Ill. Filed Mar. 11, 1918. Serial No. 221,744. 85 Claims. (Cl. 189—81.)

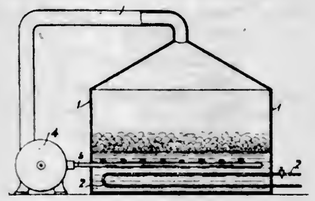
1. A fire fighting device, consisting of a collapsed shield section, a telescopic truck including a fixed truck member, and an extensible truck member carrying said shield section, and rockable standards pivoted on the extensible truck member and adapted to engage the fixed truck member upon telescoping the truck, to rock said standards.

1,351,086. TOY-CABIN CONSTRUCTION. JOHN LLOYD WRIGHT, Chicago, Ill. Filed Jan. 8, 1920. Serial No. 350,095. 3 Claims. (Cl. 46—35.)



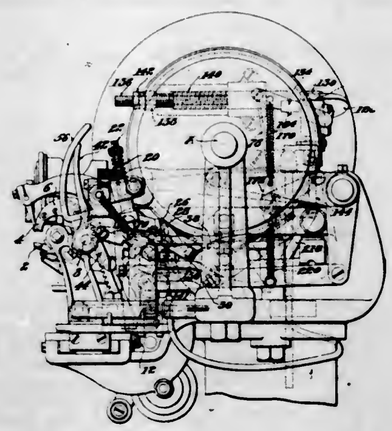
1. A toy structure in the representation of a log cabin or the like comprising a plurality of notched members resembling logs adapted to be assembled one above the other to form the walls of a structure, the members of each wall having interlocking engagement with each other at the corners of the structure, and means for forming end wall gables comprising a series of members of uniformly decreasing length placed one upon the other, a plurality of transverse connecting members interposed between and interlocking the ends of said last mentioned members, and a member positioned at the apex of said end gable extending between the same to form a ridgepole.

1,351,087. WATERPROOFED MATERIAL AND PROCESS OF MAKING SAME. ROSER B. SUTTER, Newark, N. J., assignor to Zenitherm Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 2, 1917. Serial No. 151,962. 16 Claims. (Cl. 106—25.)



15. A structural material, comprising kieselguhr or infusorial earth and a refractory binder by which the particles of said material are held together.

1,351,088. PROCESS OF SNIPPING BEANS. EDWARD J. VAUDREUIL, Eau Claire, Wis. Original application filed Mar. 12, 1917, Serial No. 154,104. Divided and this application filed May 28, 1917, Serial No. 171,405. Renewed Jan. 15, 1920. Serial No. 351,557. 5 Claims. (Cl. 146—11.)



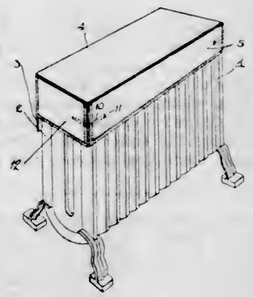
1. The process of snipping bean pods which consists in operating upon several previously assorted lots each containing rods of substantially the same thickness, by presenting each lot of pods to a separate supporting member, each of said members having therein a multiplicity of apertures of a size proportioned to the size of the pods presented thereto and of a different size for each member, acting upon the pods of each lot as they are presented to its member to cause the ends thereof to pass into the apertures of such member and to have the part to be snipped protruding through said apertures, and snipping said protruding parts.

1,351,089. METHOD OF PRODUCING FOAM IN LIQUIDS. ELIAS WIRTH-FREY, Aarau, Switzerland. Filed Apr. 8, 1919. Serial No. 288,644. 2 Claims. (Cl. 8—2.)

1. The herein described method of producing foam by heating a liquid, which consists in drawing off the steam rising from the liquid under treatment and in reconducting it again under pressure into the liquid without contact with atmosphere.

1,351,090. SHOE-SEWING MACHINE. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 1, 1918. Serial No. 231,937. 11 Claims. (Cl. 112—61.)

1. A sole sewing machine having, in combination, stitch forming devices, a work support, a presser foot, a cam shaft, driving mechanism therefor, a stop disk driven by the cam shaft provided with a stop shoulder, a stop dog movable toward and from said disk and normally out of operation while the machine is running, a controlling dog movable with said stop dog and also movable independently at right angles to the movement of the stop dog, a surface on said disk coöperating with the controlling dog to hold the stop dog out of the path of said shoulder, a cam on said disk to move the controlling dog with relation to the stop dog out of the path of said surface, means for throwing the stop dog into operation and the driving mechanism out of operation to stop the machine and normally inoperative mechanism thrown into operation on stopping the machine for lifting the presser foot before said stop dog engages said stop shoulder.



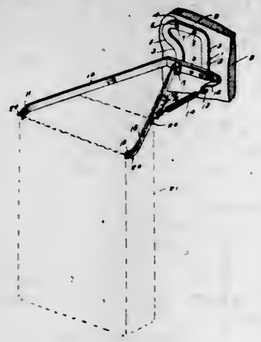
1,351,091. METHOD OF OBTAINING ZIRCONIUM OXID. LOUIS E. BARTON, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a Corporation of Maine. Filed Sept. 24, 1919. Serial No. 325,961. 5 Claims. (Cl. 23—13.)

1. In obtaining zirconium oxid, from a material containing an undesired substance, the steps which consist in melting said material with a carbonaceous reducing agent to production of zirconium cyanonitrid; and subjecting the resulting product to the action of sulfate of an alkali metal.

1,351,092. METHOD OF RECLAIMING PAPER-STOCK. CHARLES BASKERVILLE, New York, N. Y., and CLARENCE M. JOYCE, Leominster, Mass. Filed Oct. 7, 1919. Serial No. 328,982. 4 Claims. (Cl. 92—3.)

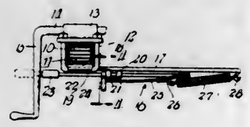
1. The method of reclaiming inked paper which consists in saturating the paper in a mixture composed of kerosene, borax, soap and water.

1,351,093. COVER FOR RADIATORS. RAY G. BROWN, Cleveland, Ohio, assignor to The Carey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 13, 1917. Serial No. 196,499. 4 Claims. (Cl. 237—79.)



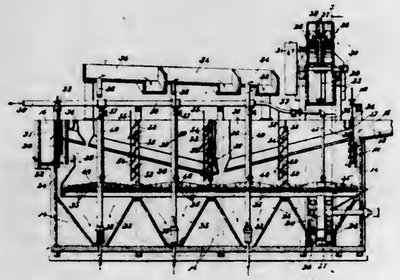
4. A radiator cover comprising a flat central section and a plurality of other flat sections attached to the sides and ends of the central section, the central section being adapted to extend across and rest upon the top of a radiator, and the other sections being adapted to depend from the central section along the sides and ends of the radiator parallel therewith.

1,351,094. SACK-HOLDER. ALBERT BUCKEL, Peru, Ill. Filed May 3, 1919. Serial No. 294,362. 1 Claim. (Cl. 83—26.)



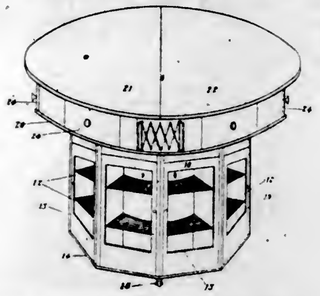
A bag holder comprising a vertical base member arranged to be secured to a support, a bag supporting member secured to the said base member, and having at one end an outwardly extending arm at an angle thereto, a second arm pivotally secured to said supporting member and extending outwardly therefrom, the opposite end of said supporting member being bent forward and curved to form a retaining hook, a contractile coil spring se-

cured to said hooked end and connected with the hinged arm, the free terminals of said arms being curved in-



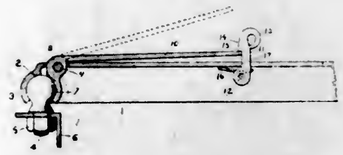
wardly and prongs mounted upon the arms some of them at the curved portions of the arms and others at points spaced therefrom.

1,351,095. LOCKING DEVICE FOR ENGINE-STARTING CRANKS. MAX J. COHN, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,497. 6 Claims. (Cl. 70—130.)



1. A device of the kind described comprising, a plate adapted to be attached to a fixed part of an automobile in the vicinity of the engine starting crank, a yoke longitudinally slidable on said plate, said yoke having laterally spaced side bars, which in one position of the yoke will engage on opposite sides of said starting crank, and a lock for connecting the ends of said side bars together when said crank is arranged between said side bars.

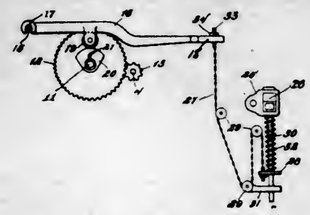
1,351,096. APPARATUS FOR SEPARATING OR CONCENTRATING ORES. DAVID COLE, El Paso, Tex., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Original application filed Aug. 3, 1915. Serial No. 43,444. Divided and this application filed Dec. 4, 1915. Serial No. 64,993. 2 Claims. (Cl. 83—82.)



1. A hydraulic sizer comprising a tank having an inlet at one end, an outlet at the opposite end, and a plurality of sizing compartments at the bottom, said tank being constructed and arranged to permit a free flow of material therethrough in a substantially horizontal direction from said inlet to said outlet and above said compartments, and a series of vertically disposed spaced sets of shutters within said tank, said shutters having slats downwardly inclined in the direction of flow.

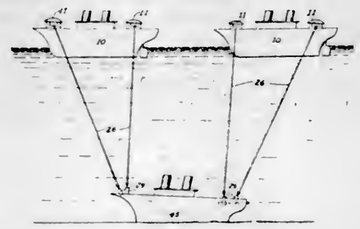
1,351,097. COMBINATION REFRIGERATOR AND TABLE. FREDERICK COOK, Chicago, Ill. Filed June 9, 1919. Serial No. 302,785. 1 Claim. (Cl. 45—71.)

A combined refrigerator and table, comprising a central ice chamber, a provision compartment surrounding said chamber, a top for said compartment projecting therefrom, said top being flush with the top of the ice chamber, the latter being open at the top and provided thereat with a removable closure, a table top located above the ice chamber and the aforesaid top of the provision compartment, said table top being composed of opposite sections which meet above the ice-chamber and cover the same, and said sections being slidable outwardly to uncover the ice-chamber, slides on the provision compartment top clear of the ice chamber, for supporting the table top sections, and drawers in the space between the table top sections and the provision compartment top, said drawers terminating at their inner ends short of the ice chamber.



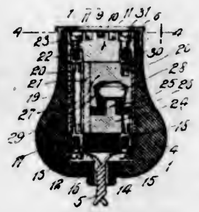
1,351,098. TRAILER-COUPLING. ALLEN W. CORWIN, Wellsville, N. Y. Filed Mar. 13, 1920. Serial No. 365,444. 13 Claims. (Cl. 213—67.)

12. A trailer coupling comprising the combination of a ball member mounted on an upwardly extending shank adapted to be secured to a vehicle, a tongue member having a ball-receiving socket opening through the bottom thereof, securing means on the tongue member comprising a ball-engaging element and a relatively long resilient operating arm therefor, a spring-pressed latch having a locking face thereon adapted to engage and lock the said arm in the securing position, the locking face of the latch and the complemental engaging face of the arm being so formed that the same will not become disengaged even though the latch-operating spring becomes inoperative.



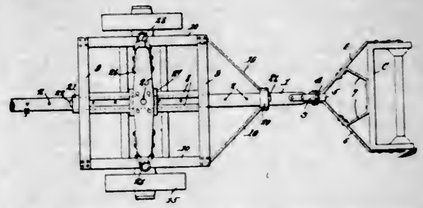
1,351,099. BOX-MOTION FOR LOOMS. WILLIAM JOHN CROWLE, Easton, Pa. Filed Mar. 4, 1920. Serial No. 363,145. 3 Claims. (Cl. 139—28.)

1. In a loom, shuttle-boxes, and shuttle-box raising and lowering mechanism including a lower cylinder gear shaft, of a vibrator gear shedding mechanism, a pattern chain cylinder shaft, gearing between said shafts, a vibratory



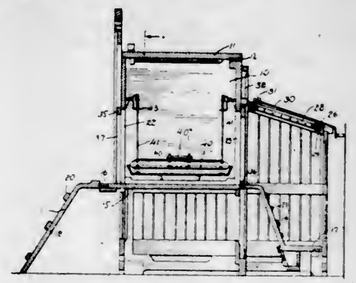
lever, a cam actuated by said gearing for periodically raising and lowering the lever, and connecting means between the lever and the shuttle-boxes.

1,351,100. SHIP-SALVAGE DEVICE. TERENTIE DAVIDENIA, Detroit, Mich. Filed Feb. 4, 1920. Serial No. 356,138. 3 Claims. (Cl. 114—51.)



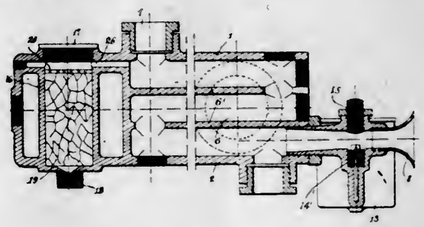
1. In an apparatus for raising sunken vessels, a grappling device adapted to be attached to a cable comprising a casing, a pair of arms pivoted in the lower ends of said casing, a member movable in the casing and engaging the said arms to retain them against outward movement, said member being adapted to have the cable attached thereto, and a spring pressing said member against the said arms.

1,351,101. ELECTRIC MERCURY-SWITCH. RAFAEL ESPINOSA DE LOS MONTEROS, New York, N. Y. Filed Aug. 11, 1919. Serial No. 316,530. 1 Claim. (Cl. 200—152.)



A handle having a chamber in which is placed a plug having an insulated top and two screws, each of which engages a socket, a conducting tube attached to one socket and a plug attached to the other, a projection on said plug and an insulation on the plug and surrounding said projection, a second plug mounted on the insulation with a cavity therein adapted to form a chamber with the first mentioned plug and the insulation, mercury in said chamber and means for holding all of said parts in proper relation so that when the switch is held in one position, an electric circuit is closed through the mercury and plugs, and when the switch is held in another position, a circuit is opened through the mercury and plugs.

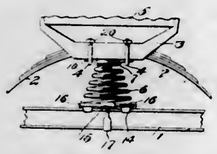
1,351,102. TRAILER. ALEXANDER FRIGELSON, Beaumont, Tex. Filed Aug. 2, 1918. Serial No. 247,992. 9 Claims. (Cl. 280—33.1.)



1. A structure of the character described including a wheel supported frame, a pole carried thereby, said pole and frame being capable of relative longitudinal adjustment, a member slidable longitudinally on said frame, and a bolster pivotally connected to the slidable member.

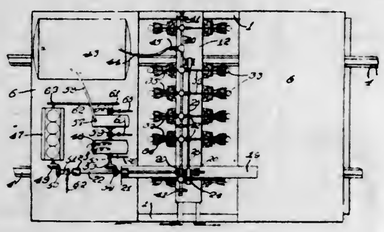
1,351,103. TRAP-NEST. CHARLES EDWARD GLANDER, Jersey City, N. J. Filed Apr. 9, 1919. Serial No. 288,685. 4 Claims. (Cl. 119—50.)

1. A poultry coop comprising a nest inclosure, a main coop extending below and to one side of said inclosure, said nest inclosure having a pair of sliding doors forming entrance and egress openings, a nest within said inclosure, a pair of rods to the lower ends of which said nest is hung, brackets secured to the frames of the respective doors, and a pair of arms pivoted between their ends to the said brackets and having the said rods suspended from one end thereof and their opposite ends adapted to wedge against the said doors to retain the latter in raised position.



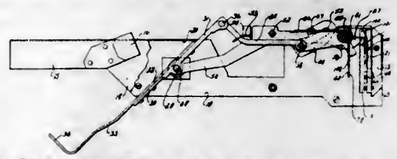
1,351,104. CARBURETER FOR INTERNAL-COMBUSTION ENGINES USING HEAVY OILS. FERNAND GRENIER, Nantes, France, assignor to La Société Robin, Grenier Vidy & G. Zwingelstein, Nantes, France. Filed Dec. 19, 1918. Serial No. 267,525. 2 Claims. (Cl. 48—61.)

1. A carbureter for heavy-oil internal combustion engines, comprising a casing having inlet and outlet ports



for the admission and escape of the hot exhaust gases of the engine; a tortuous vaporizing conduit in said casing around which said hot gases circulate, said conduit having an air inlet at its inlet end and having its outlet end in communication with the intake manifold of the engine, whereby a suction action is exerted in the conduit; a reservoir for containing heavy oil connected to said casing adjacent the inlet end of said conduit and having a device associated with it for spraying the oil into said conduit end to mix with the air drawn thereinto; means for regulating the admission of air through said conduit end; a chamber for containing coal located within said casing in advance of said conduit and exposed to the heating action of the hot gases circulating through said casing; and means for supplying water to the bottom of said chamber to be converted into steam by the heat thereof, said chamber being in communication at its top with the outlet end of said conduit, whereby the steam will be drawn into the conduit for admixture with the mixture of air and vaporized oil passing therethrough by the suction action exerted in said chamber.

1,351,105. AUXILIARY SPRING FOR AUTOMOBILES AND MOTOR-DRIVEN VEHICLES. ANGUS R. GROFF, Birmingham, Ala., assignor to A. R. G. Auxiliary Spring Company, Birmingham, Ala., a Corporation of Alabama. Filed Feb. 19, 1919. Serial No. 277,999. 5 Claims. (Cl. 267—28.)

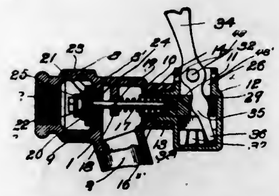


1. The combination with a vehicle body, a supporting spring therefor and spaced connecting elements, of an auxiliary coil spring having a thin attaching plate inserted between its upper coils and engaged and made fast to the body by said spaced connecting elements, and means to attach the base of said auxiliary spring to the vehicle running gear.

1,351,106. TAMPING-MACHINE. CORNELIUS G. HASTINGS, Glendale, Calif. Filed July 15, 1918, Serial No. 245,021. Renewed June 5, 1920. Serial No. 386,922. 15 Claims. (Cl. 104—12.)

1. In a device of the class described the combination of a portable frame, a reciprocal carriage mounted thereon, a vertically adjustable support on the carriage, and tamping means having a universally adjustable connection with the vertically movable support.

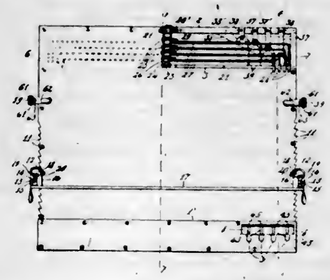
1,351,107. LABEL-AFFIXING APPARATUS. WINCENT KWASIS, Newark, N. J. Filed May 1, 1919. Serial No. 293,958. 4 Claims. (Cl. 216—23.)



1. In a label affixing apparatus, the combination with a hollow sectional frame, and a handle extending therefrom adapted to carry a roll of paper rotatably mounted in said extension, means for guiding and feeding said paper, a knife having serrations at its cutting end mounted in the path of the paper, said knife being spring impelled downward, a detent engageable with said knife whereby it is normally held in a raised position, an actuating lever pivoted in said body, said lever being adapted for a manual operation, a detent releasing lever, a link connecting said actuating lever and said detent releasing lever, a slotted lever pivoted in the outer end of said body, and a lifting toe formed with said slotted lever whereby said knife is raised, and means carried by said knife for pressing the label firmly upon the article.

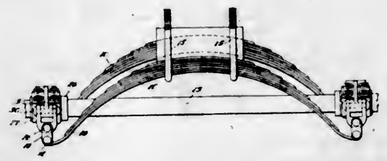
1,351,108. DENTAL IMPRESSION-TRAY. THOMAS F. LITTLEJOHN, Plano, Tex. Filed June 8, 1920. Serial No. 387,494. 3 Claims. (Cl. 32—6.)

1. A dental impression tray comprising plate and end members, the former separably hinged longitudinally, side inclosing members attachable thereto, flanges on said plate and end members, and a clamp adapted to maintain said plates and sides in closed relation.



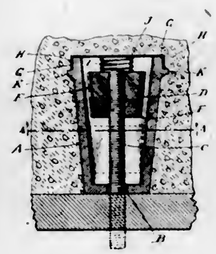
1,351,109. VALVE. WINFIELD S. LIVENGOOD, Kansas City, Mo., assignor to Andrew A. Kramer, Kansas City, Mo. Filed May 9, 1919. Serial No. 295,816. 3 Claims. (Cl. 251—165.)

1. A faucet comprising a casing having a slot extending vertically through it and provided with an inlet and an outlet, a valve between the inlet and the outlet, a spring-actuated slide for normally maintaining the valve on its seat, upstanding flanges on opposite sides of the slot and provided with seats, a flange depending from the casing adjacent to the slot and having teeth, and a valve unseating lever insertible through the slot and having side projections to engage said seats, the lower end of said lever being engageable with the teeth on the flange.



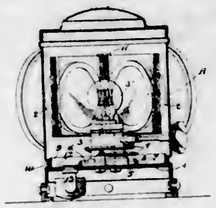
1,351,110. LEAF-TURNER. AMBROSIO VALENTIN LÓPEZ, Marianao, Cuba. Filed Mar. 15, 1917. Serial No. 155,043. 1 Claim. (Cl. 84—17.)

In a music leaf turner, the combination of a pivotally mounted leaf turning arm arranged to swing in a horizontal plane, a pivotally mounted key lever, connections between the arm and the lever to cause the arm to be positively actuated from the key, a spring to move the key lever in one direction and to hence cause the lever



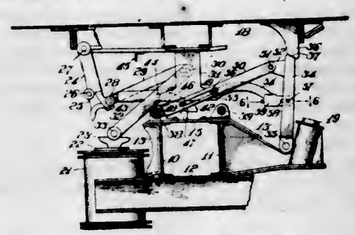
to positively move the arm in one direction, a detent, and means to yieldably engage the detent with the under side of the key lever to cause the detent to yieldably hold the key lever when the latter is moved in the other direction against the tension of the spring.

1,351,111. VEHICLE-SPRING. JAMES A. LUKE, Cleveland, Ohio. Filed Feb. 2, 1920. Serial No. 355,723. 8 Claims. (Cl. 267—19.)



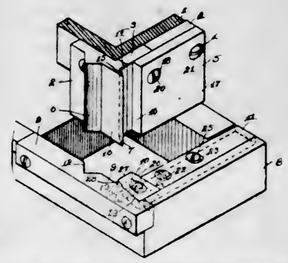
1. In a vehicle, the combination with a vehicle axle, of a pair of leaf springs placed respectively along opposite sides of said axle, and a lever fulcrumed on the axle and connected at its opposite ends to adjacent ends of each spring.

1,351,112. HANGER FOR CONCRETE CEILINGS. EUGENE T. MARTIN, Chicago, Ill. Filed Aug. 28, 1919. Serial No. 320,343. 5 Claims. (Cl. 72—105.)



5. In a device of the character described, an open topped socket having a wall adapted to be placed flush with a face of the concrete, said wall having an opening through which a bolt can project from the interior of the socket, an interlocking cover for the top of the socket, said socket adapted to contain a non-rotatable nut to receive the bolt and deep enough to permit the bolt to be pushed into the socket until the outer end of the bolt is flush with the outer face of said wall.

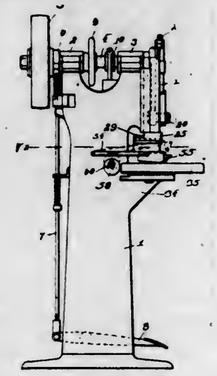
1,351,113. SIGNAL-LAMP. AUGUST MEYER, Wellston, Mo., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 2, 1919. Serial No. 308,210. 2 Claims. (Cl. 240—23.)



1. In a signal lamp, a shell, a lamp centrally disposed in said shell above the bottom thereof, a rim surrounding said centrally disposed lamp, and a screen carrier comprising a ring interposed between said rim and the signal lamp shell, said shell having a rounded annular bead and said carrier ring having a marginal flange contacting with each other.

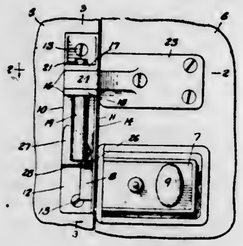
1,351,114. DUMP-CAR. ORTUS E. MOATS, Chicago, and JAMES D. BENBOW, Aurora, Ill., assignors to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 26, 1918. Serial No. 255,795. 12 Claims. (Cl. 105—271.)

1. A dump car composing a suitable under body, a car bed mounted to rock thereon, power operated mechanism for tilting the bed, laterally swinging integral struts between the under body and the sides of the bed for normally holding the bed in its normal position, members connected respectively with the under body and with said struts and coöperating to hold said struts in operative position and operated by the actuation of said power operated mechanism to dump the bed to release the struts at the dumping side of the car, and means for positively moving said struts into operative position when the car bed is righted.



1,351,115. ADJUSTABLE CUTTING-KNIFE. WILLIAM F. MORSE, Rochester, N. Y., assignor to Samuel R. Parry, Rochester, N. Y. Filed Sept. 29, 1917. Serial No. 193,981. 10 Claims. (Cl. 164—58.)

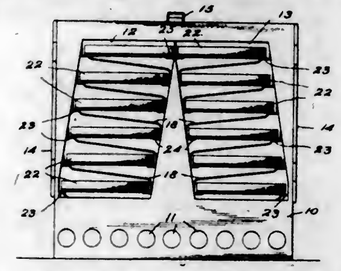
1. A cutting die formed of two cutting bars placed one at the side of the other and having an acute angular



recess between them, one of said cutting bars having an oblique seat on the other cutting bar along which it can be adjusted to take up wear and grinding and preserve the outline of the original cutting edge.

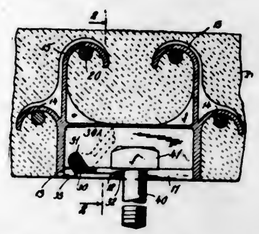
1,351,116. CORNER-CUTTER. WILLIAM F. MORSE, Rochester, N. Y., assignor to Samuel R. Parry, Rochester, N. Y. Filed Oct. 10, 1917. Serial No. 195,830. 5 Claims. (Cl. 164—50.)

1. In a machine for cutting box corners, the combination of a frame having a V-shaped recess extending rearwardly therein, the sides of said recess forming reinforcing members for said frame in the front thereof, a table in front of said recess and a cutter reciprocating above said table and between said table and said recess.



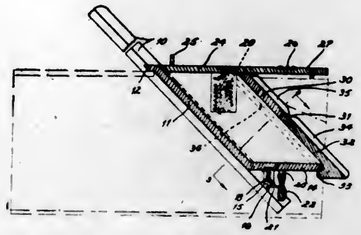
1,351,117. LOCK CONSTRUCTION. FREDERICK A. NEWHALL, New York, N. Y. Filed Dec. 13, 1919. Serial No. 344,530. 4 Claims. (Cl. 70—15.)

1. The combination with a lock, of a supplemental lock comprising a striking plate secured to a stationary support, an apertured lock element movable into and out of engagement with said striking plate, a lock bolt movably mounted in the striking plate and adapted in one position thereof to pass through said lock element to secure in engagement with said striking plate, means operated by the latch bolt of the first named lock for moving said lock bolt into its operative position, and means whereby the withdrawal of said latch bolt will permit said lock bolt and the means for operating the same to move into inoperative position by gravity.



1,351,118. APPARATUS FOR DEHYDRATING FOOD PRODUCTS. FRANK L. NICHOLS, Stamford, Conn. Filed Feb. 4, 1919. Serial No. 274,866. 3 Claims. (Cl. 34—39.)

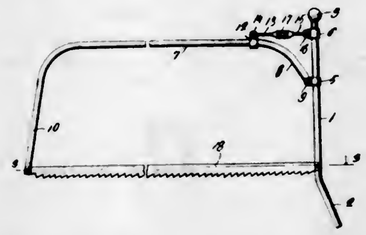
1. In apparatus for dehydrating food products, a casing provided with an inlet and an outlet flue, deflecting plates forming separate branch passages between said flues, said deflecting plates being provided at their inner



and outer edges with tray supporting ledges and perforated trays supported in a substantially horizontal position upon said ledges.

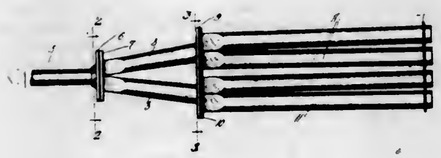
1,351,119. CONCRETE-INSERT. JOHN EDWARD OGDEN, Cornwall, N. Y. Filed Oct. 19, 1918. Serial No. 258,772. 11 Claims. (Cl. 72—105.)

1. A concrete insert comprising a box-like housing open on one side having parallel side walls and flanges near opposite edges of said side walls extending inwardly therefrom in a plane normal to the planes of said side walls and extending substantially throughout the length of said side walls for supporting the head of a bolt or nut, a part of at least one of said flanges being inwardly movable to permit the insertion of a bolt head or nut.



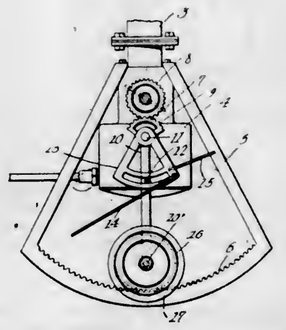
1,351,120. GARBAGE-BOX FOR WAGONS. JOHN ORMANIEC and GEORGE LEMBAS, Novinger, Mo. Filed Oct. 29, 1919. Serial No. 334,134. 4 Claims. (Cl. 220—98.)

1. In a garbage box of the class described, the combination with a rhomboidal container having an open top, a pair of diagonally disposed angular guide rails upon which said container is adapted to slide, detents carried by said container engageable with said rails whereby the container may be held at a desired height, a cover for said container, means for holding said cover in a closed position and a hinged door for the outer wall of said container through which the contents are accessible.



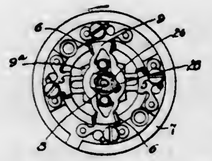
4. In a container of the class described, the combination with a pair of angular guides disposed in spaced parallel relation and in a diagonal plane, of a container slidably mounted in said guide rails, said container having the form of a hollow rhomboid, lugs extending downward from the lower walls of said container, detents pivoted in said lugs, said detents being engageable with the inner surfaces of said angular rails, means for manually actuating both of said detents simultaneously whereby they may be disengaged, and said container raised, said container being adjustable to any height along said rails, a cover element fixedly engaged with the supports of said rails, a hinged cover element engaged with the said fixed element, a handle by which said hinged cover may be operated, a pair of oppositely disposed springs engaged with said cover at one end, and with the side walls of said container at their opposite ends whereby said cover is normally closed, a door hingedly engaged with the outer wall of said cover covering an opening therein, and means at the lower ends of said door engaging with the bottom of said container.

1,351,121. SAW-FRAME. THOMAS OUELLETT, Central Falls, R. I. Filed Oct. 4, 1919. Serial No. 328,365. 1 Claim. (Cl. 145—32.)



A saw frame comprising a rod having an arm connected at one end to the saw, the other end of the rod being pivotally connected to another rod transverse to the body of said first rod and having a saw pivotally connected to the second rod on the other side of the first mentioned pivot and to the body of the first mentioned rod each of the three pivotal connections comprising a like split clamping ring, two of which clamp the second mentioned rod and one the body of the first mentioned rod, and having projecting ears connected by a pin or rivet which forms the pivot of the first mentioned rod and for the two ends of the adjustable brace.

1,351,122. MUFFLER. HANS PAULSON, Ortin, Wash. Filed June 30, 1919. Serial No. 307,562. 3 Claims. (Cl. 137—160.)

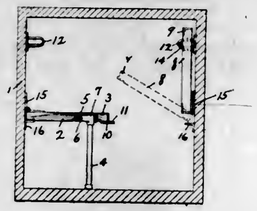


1. A muffler for internal combustion engines comprising a plate provided with an opening adapted to receive an end of the exhaust pipe of the engine, a second plate secured to the first named plate, the second named plate being provided with a plurality of openings partially registering with the opening of the first named plate, and a plurality of diverging pipes secured to the second named plate, the plurality of pipes having their ends secured within the openings of the second named plate so as to receive equally divided portions of exhaust from the exhaust pipe.

1,351,123. GRAVITY CONTROL FOR GAS-ENGINE FEED. EMORY WILLIS PEERY, Lynchburg, Va. Filed Sept. 27, 1918. Serial No. 255,925. 2 Claims. (Cl. 251—11.)

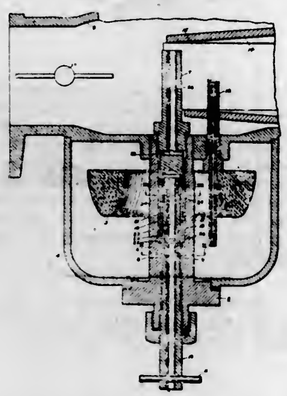
1. A gravity control for gas engine feed, including a carbureter, a valve therein, a gear secured to the stem of the valve, a segmental gear meshing with said valve gear, a rod depending from and movable with the segmental gear, separate frames mounted for oscillation about the axis of movement of the rod and having matching slots concentric with said axis, a pin projecting from the rod and into the slot, and separate means connected to the frames for moving them independently in opposite directions respectively.

1,351,124. ROTARY SNAP-SWITCH. CLARENCE D. PLATT, Bridgeport, Conn. Filed June 30, 1919. Serial No. 307,742. 5 Claims. (Cl. 200—63.)



1. In a rotary snap switch, a base, a rotatable spindle mounted thereon, a rotatable switch piece mounted on the spindle, latch mechanism for permitting only a step by step rotation of said switch piece, a spring surrounding said spindle and engaged at one end with said switch piece, a plate having an elongated opening with one portion wider than the remainder and angularly adjustable on and around said spindle, the other end of said spring being engaged therewith.

1,351,125. FOLDING FLOOR FOR RAILWAY-CARS. ROBERT F. REX, Andover, Ohio. Filed Dec. 8, 1919. Serial No. 343,269. 1 Claim. (Cl. 105—372.)



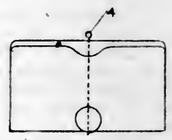
In a device of the class described, having in combination with a railway car, a second floor formed in sections, the outer edge of each section hinged to the sides of said car,

an L-iron secured to the sides of the car directly underneath the hinged edges, folding legs attached to the inner

edges of said section, each leg attached to an offset pivot portion.

1,351,126. FUEL-MIXER. GEORGE F. RITTER and HARRY C. TILLOTSON, Toledo, Ohio, assignors to The Tillotson Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 5, 1916. Serial No. 118,369. 24 Claims. (Cl. 261—41.)

1. In a carbureter, the combination with a fuel supply nozzle, of an air supply passage, a valve comprising a plurality of leaf springs mounted in said passage so that the nozzle is adjacent the greatest movement of the leaf springs and extends transversely of the air supply passage to substantially close said passage when the springs are in their normal position.



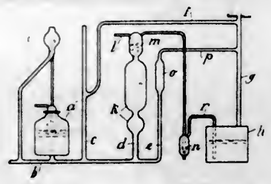
2. In a device of the class described, the combination with a fuel supply nozzle, of an air supply passage, a choke tube section therein comprising a frame having a plurality of triangular shaped sides and a plurality of rectangular shaped sides and a plurality of rectangular sides, and flexible reeds normally closing openings in certain of said sides.

3. In a carbureter, in combination with a main air supply passage, a fuel nozzle projecting into said air supply passage, and a valve comprising oppositely positioned converging flexible reeds having their free ends located adjacent the fuel nozzle and normally coöperating therewith to substantially close said main air supply passage.

4. A device of the class described, comprising the combination of a mixing chamber; a fuel reservoir; a choke tube having side walls formed of flexible reeds adapted to yield under suction to increase the cross section of said choke tube; a primary fuel nozzle extending between the free ends of said reeds, and a secondary nozzle projecting into said choke tube in the rear of said primary nozzle.

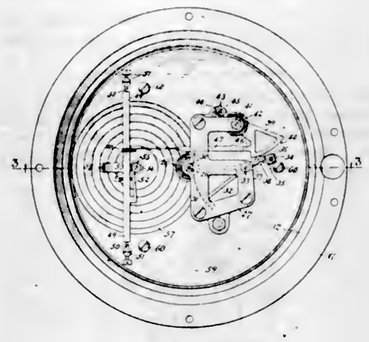
5. A device of the class described, comprising the combination of a mixing chamber; a fuel reservoir; a movable choke tube section having side walls formed of converging flexible reeds secured at the rear edges to said section; a primary nozzle projecting into said mixing chamber between the free end of said reeds, and a secondary nozzle projecting into said section behind said primary nozzle.

1,351,127. CLIP AND SUPPORT FOR VERTICAL FILE-FOLDERS. JOHN L. RIVERS, Seattle, Wash. Filed Jan. 22, 1919. Serial No. 272,415. 4 Claims. (Cl. 129—16.7.)



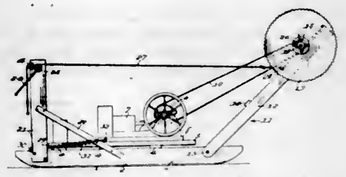
1. A clip and support for a vertical file folder, comprising a body member adapted to support said folder vertically in a file, said member carrying at its top portion a lift, at its lower portion an element adapted to clampingly hold said folder and contents.

1,351,128. UPRIGHT GAS-LAMP. JACOB I. ROBIN, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,079. 4 Claims. (Cl. 67—96.)



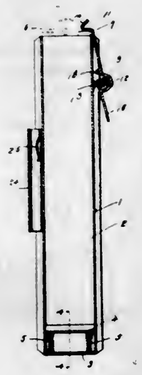
1. An incandescent gas lamp, comprising a bunsen, an upright closed top burner tube thereon, having a plurality of burner holes in its circumference and a central burner hole in its top and an incandescent mantle loosely mounted over the closed-top of said burner tube, so as to extend around said burner holes and be capable of rising under the action of the gas issuing from said central hole to be out of contact with said burner tube.

1,351,129. AUTOMATIC GAS-ANALYZING APPARATUS. OLOF RODHE, Stockholm, Sweden, assignor to Svenska Aktiebolaget Mono, Stockholm, Sweden, a Corporation. Filed Jan. 26, 1920. Serial No. 354,283. 2 Claims. (Cl. 23—3.)



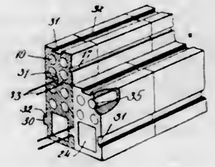
1. An arrangement in automatic gas analyzing apparatus provided with a primary measuring vessel, an absorption vessel and a secondary measuring vessel, characterized by this that a pipe connected with one of the said two last mentioned vessels contains a measuring vessel in which a certain quantity of gas is measured on each analysis, the said quantity of gas being led into one of said two vessels, simultaneously with the gas from the primary measuring vessel.

1,351,130. MEASURING INSTRUMENT. ALFRED ROESCH, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 9, 1918. Serial No. 261,774. 6 Claims. (Cl. 73—74.)



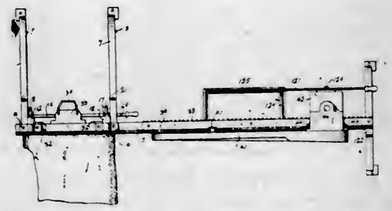
1. In a measuring instrument, the combination of a scale, a pointer coöperating therewith, a shaft carrying said pointer, a pinion on said shaft, a toothed segment in mesh with said pinion, a cam for operating said segment whereby said pointer is actuated, a rock-shaft extending transversely to said pointer shaft, a link connecting said cam and rock-shaft and means located adjacent to said rock-shaft for actuating the same whereby said cam is operated to actuate said segment and pointer.

1,351,131. ICE-CUTTING MACHINE. ETHAN A. RUPLE, Burlington, Vt., assignor of one-half to Raymond F. Ruple, Charlotte, Vt. Filed Mar. 20, 1920. Serial No. 367,346. 4 Claims. (Cl. 262—20.)



1. In an ice cutting machine, the combination with a supporting frame having guides, of a carriage thereon, power means mounted on the carriage, a beam mounted on the support for movement in a vertical plane and provided with an ice cutting mechanism, driving connections connecting the power means and the ice cutting mechanism, and means for returning the carriage to its normal position when the beam is raised.

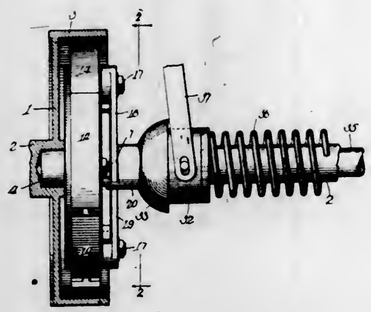
1,351,132. CASE FOR FOLDING RULERS. JAMES HARVY RUTLEDGE, Pittsburg, Kans. Filed May 7, 1920. Serial No. 379,579. 5 Claims. (Cl. 24—3.)



1. A device of the character set forth comprising a ruler receiving chamber, ruler ejecting means in said chamber, means locking a ruler in said chamber against the ejecting means, and a pencil holder carried by said chamber.

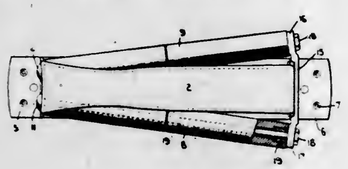
1,351,133. INSULATING-CONDUIT. JOHN A. SCHARWATH, Elizabeth, N. J. Original application filed Jan. 15, 1916, Serial No. 72,197. Divided and this application filed Jan. 15, 1918. Serial No. 211,920. 7 Claims. (Cl. 137—75.)

1. In a structure of the character described, bricks or blocks having interfitting tongues and grooves and provided with coöperating opposed key slots in the sides of said tongues and grooves and rods or keys engaged in said coöperating key slots and removable therefrom for the purpose of enabling separation of the bricks or blocks thus keyed together.



1,351,134. BAG-SEWING MECHANISM. JACOB EMIL SCHMANDT, Harrington, Wash. Filed Nov. 23, 1918. Serial No. 263,858. 18 Claims. (Cl. 112—11.)

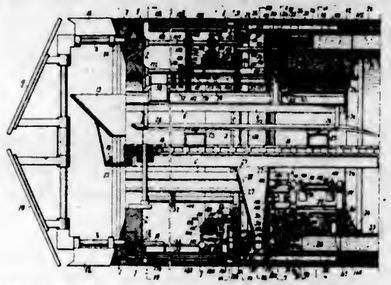
1. In a bag sewing machine, a shiftable case having a longitudinally extending slot to receive a bag, sewing mechanism mounted within said case and including a re-



ciprocating needle movable across said slot, means for actuating said mechanism in the movement of the case in one direction and means for retracting the needle within the case when the case is moved in the opposite direction.

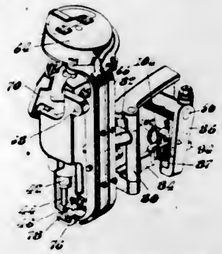
1,351,135. CLUTCH. RICHARD SCHMITZ, Chicago, Ill. Filed Feb. 7, 1919. Serial No. 275,493. 6 Claims. (Cl. 192—5.)

2. In a device of the character described, the combination with a member to be gripped, of a clutch mechanism comprising a tube, a hub fixedly mounted thereon having a radially extending flange, stud bolts mounted in said flange, a segment pivotally secured to each of said stud bolts, stud bolts mounted in said segments, frictional devices pivotally carried by all of said stud bolts having frictional engaging surfaces formed thereon, there being U-shaped recesses in said frictional devices adjacent the bearing for said stud bolts, an annular member mounted on said hub, a plurality of rollers in number corresponding to the number of frictional devices, said rollers being fitted to the U-shaped recesses, longitudinally movable means mounted on said tube the movement of which operates to rotate said annular member whereby the frictional devices are projected outwardly.



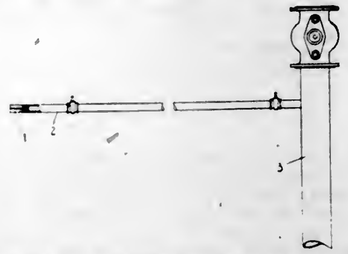
1,351,136. SHOE-POLISHER. WILLIAM E. SHEEHY, East Boston, Mass. Filed Sept. 5, 1919. Serial No. 321,868. 1 Claim. (Cl. 15—58.)

A polishing device comprising a base, a plate having vertical end portions provided with flanges secured to said base and an intermediate shoe supporting portion, the vertical portion at the toe end having a transverse groove therein, shafts, having guiding rollers thereon, anchored at one end in the vertical heel portion and means seated in said groove supporting the other ends of said shafts.



1,351,137. MACHINE FOR BUILDING SEWERS. MILTON ROY SHEEN, Philadelphia, Pa., assignor to Tunnel Machine Manufacturing & Engineering Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 7, 1916. Serial No. 118,812. 61 Claims. (Cl. 61—84.)

1. A machine of the character described comprising a circular casing, a structure composed of sectional blocks formed within the casing, a cam rotatably mounted within

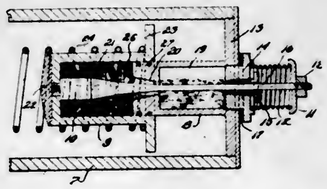


the casing adapted to press against said structure as it is formed, and means for rotating the cam to propel the casing.

1,351,138. EYELETING-MACHINE. ROBERT B. SMITH, Stoughton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 21, 1918. Serial No. 212,972. 7 Claims. (Cl. 218—15.1.)

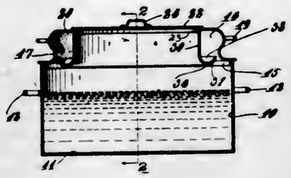
4. In a machine of the character described, a reciprocable fastener-engaging device, means arranged to reciprocate said device, a raceway the delivering end of which is movable into and out of the path of said device, and mechanism arranged to be operated by a reciprocatory element of said means to control the movements of the raceway, said mechanism including a raceway-operating cam having two relatively long dwell portions connected by a relatively short actuating portion, said cam being shiftable to alter the effective timing of said actuating portion, and means arranged to shift said cam during the latter stages of each stroke of said device to postpone the operation of said actuating portion during the next succeeding stroke of said fastener-engaging device.

1,351,139. APPARATUS FOR EXTRACTING LIQUIDS OR GASES. JAN SONNEVELD, Schela Gura Ocnitsei, near Targoviste, Roumania. Filed Mar. 10, 1917. Serial No. 154,604. 1 Claim. (Cl. 299—107.)



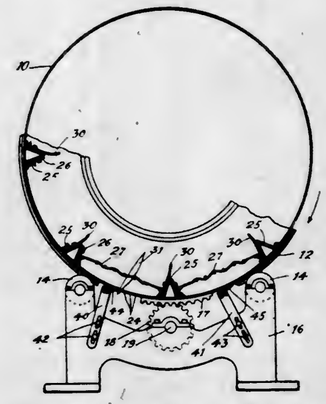
Apparatus for extracting liquids or gases, under pressure and containing granular material, from wells, comprising a discharge pipe connected substantially horizontally to the casing of the well and provided at its outer end with a tubular nozzle of considerable length, the bore of which has a diameter smaller than that of the bore of the pipe, the nozzle bore being coaxial with the bore of the pipe and being rounded at its inner end to reduce the wear caused by the granular material.

1,351,140. DOG-MUZZLE. HENRY LESPINASSE STOKER, New York, N. Y. Filed Oct. 17, 1919. Serial No. 331,442. 4 Claims. (Cl. 119—130.)



1. A dog muzzle, comprising a frame made of a single integral length of wire, said wire frame bent to fit sides of head and form a U distant in front of and a little below the upper teeth, said wire frame to engage an adjustable neck strap near the ends of said wire frame, means for connecting the U-frame and neck strap, said neck strap to have a fixed position relative to the horizontal plane of said wire frame, said neck strap permitted to have a sliding movement on the length of said wire frame, said neck strap to fit snugly around the dog's neck, said wire frame to engage a nose strap, said wire frame to have a fixed position relative to said nose strap, said nose strap to have an adjustable position relative to said wire frame, said nose strap to fit loosely around dog's snout, said nose strap to have an adjustable circumference, not permitted to expand after adjustment.

1,351,141. BUFFER. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor of one-half to Thomas F. Ryan, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,185. 22 Claims. (Cl. 42—3.)



1. A buffer for firearms or the like comprising recoil cushioning means and mechanical means independent of the cushioning means to retard the reaction of said cushioning means.

1,351,142. BOILER. ANTONI TOMASZAK, Cohoes, N. Y., assignor of one-third to Jozef Waz, Cohoes, N. Y. Filed July 20, 1917. Serial No. 181,686. 1 Claim. (Cl. 53—1.)

In a boiler, the combination of a metallic vessel, with a cover fitted thereto, said cover being provided with a flange fitting against the interior wall of said vessel, a central interior tube formed with said cover extending downward therein, an outwardly flaring trough on the lower extremity of said tube having minute perforations and a supplementary flanged cover closing the upper end of said tube.

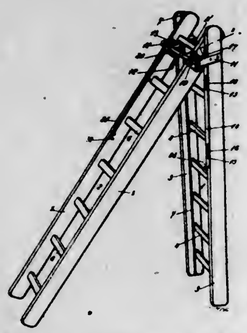
1,351,143. APPARATUS FOR SNIPPING BEANS. EDWARD J. VAUDREUIL, Eau Claire, Wis. Filed Mar. 12, 1917, Serial No. 154,104. Renewed Jan. 15, 1920. Serial No. 351,556. 8 Claims. (Cl. 146—11.)

1. A machine for snipping bean pods comprising a pair of spaced and apertured members, the apertures of the outer member being of a size to receive the end of a pod and to permit only the portion to be snipped to extend outside of the member, and means coöperating with said outer member to snip such protruding ends.

1,351,144. PROCESS OF ELECTRICALLY DEPOSITING ALUMINIUM. GLEN LENARDO WILLIAMS, New York, N. Y., assignor, by mesne assignments, to Henry Walton Campbell, Detroit, Mich. Filed Mar. 11, 1918. Serial No. 221,736. 19 Claims. (Cl. 204—3.)

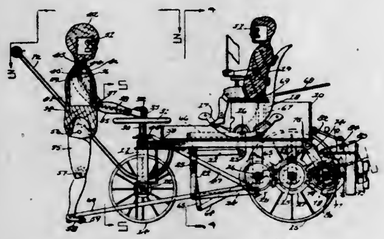
13. The process of producing aluminium which comprises electrolyzing an aluminium sulfate while dissolved in a normally liquid anhydrous vehicle inert to aluminium and of higher electrical resistance than the aluminium sulfate to be electrolyzed while in a heated condition.

1,351,145. GOLF-BALL. GEORGE C. WORTHINGTON and WILLIS E. REICHARD, Elyria, Ohio, assignors to Worthington Ball Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 9, 1916. Serial No. 83,017. 6 Claims. (Cl. 46—4.)



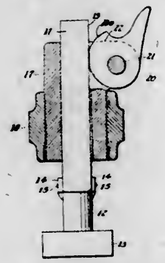
1. In a golf ball, the combination of a center part, a winding of weighted rubber thread or tape about said center part forming a thin stratum, a winding of pure rubber about said first stratum forming a second stratum, a second winding of weighted rubber about said second stratum forming a third stratum of thin weighted rubber, a fourth stratum of pure rubber wound around the third stratum and a shell or cover about the whole.

1,351,146. EXTENSIBLE LADDER. ALESSANDRO ZERLINI, Brescia, Italy. Filed June 26, 1919. Serial No. 306,980. 3 Claims. (Cl. 228—25.)



1. A ladder, comprising a pair of separable flights, each embodying connected side beams and steps; one flight

being provided adjacent its top with a horizontal cross-shaft which is attached to the side beams thereof in front of and in spaced relation to the topmost step; the other flight having inwardly-extending slots provided in its side

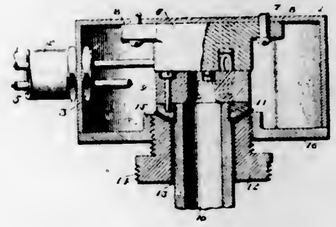


beams adjacent their upper ends to receive the adjacent portions of said shaft, and also having retaining means associated with one of said slots to bridge the same and thereby lock said shaft against displacement.

1,351,147. AUTOMATIC VEHICLE TOY. BÉLA ZSARNAY, Belleville, N. J. Filed Mar. 27, 1920. Serial No. 369,174. 2 Claims. (Cl. 46—45.)

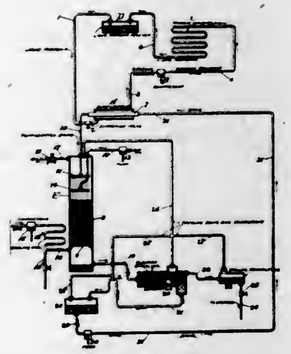
1. A mechanical toy comprising a wheeled carriage, a rocking chair on said carriage manikin seated in said chair, and means whereby rotation of the carriage wheels rocks said chair, and means for causing the body of the manikin to move oppositely to the movement of the chair.

1,351,148. WORK-CLAMP. VERNE P. ALEXANDER, Chicago, Ill. Filed Oct. 25, 1919. Serial No. 333,164. 4 Claims. (Cl. 90—59.)



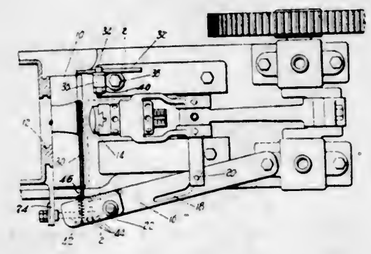
1. A clamping device comprising a headed shank, a sleeve slidably mounted on the shank, means for locking the sleeve to the shank, and a nut threaded on the sleeve and located opposite the base of the head.

1,351,149. FIREPROOFING MATERIAL. HAROLD S. ASHENHURST, Chicago, Ill. Filed Aug. 20, 1919. Serial No. 318,801. 3 Claims. (Cl. 134—45.)



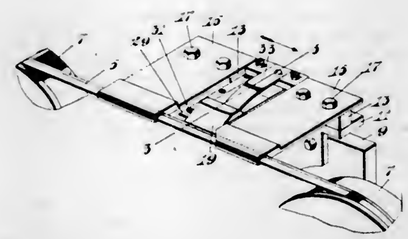
1. A new composition of matter adapted to be sprayed onto surfaces for fireproofing the same, consisting of sodium silicate, water and the finely divided product formed from the waste of asbestos mills.

1,351,150. DEVICE FOR ATTACHING ELECTRIC-LIGHT FIXTURES TO OUTLET-BOXES. RICHARD BATTLE, Okmulgee, Okla. Filed Apr. 11, 1919. Serial No. 289,268. 5 Claims. (Cl. 247—20.)



2. In combination with an outlet box having a cover plate, a pipe connection, a plug and a sectional electrical connection for an electric lighting fixture, one of said sections being secured to the box and the other being supported by the mounting for the fixture, of a collar on the inner end of the pipe connection to which the section is connected, the plug having threaded engagement with the cover for the outlet box, and engaging the collar at its inner end.

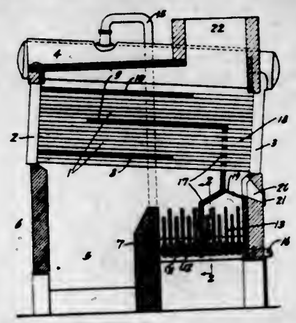
1,351,151. ART OF OBTAINING VOLATILE LIQUIDS FROM GASES. LLOYD FELCH BAYER, Tulsa, Okla. Filed Oct. 11, 1917. Serial No. 196,005. 3 Claims. (Cl. 196—25.)



1. In the art of treating hydrocarbons, the method of obtaining volatile hydrocarbon liquid from gas, said method comprising commingling the gas with a hydrocarbon oil, confining said gas and hydrocarbon oil under pressure, at the same time artificially refrigerating another liquid and commingling the refrigerating liquid with the oil and gas, so as to refrigerate the oil and gas under pressure, thereby condensing volatile constituents of the gas and blending such condensate with the oil, and thereafter separating the refrigerating liquid from the blended hydrocarbons.

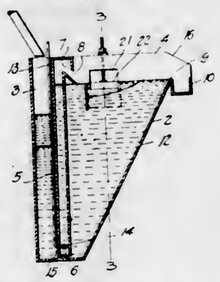
1,351,152. MACHINE FOR OPERATING ON HEELS. CHARLES A. BLISS, Bradford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 21, 1918. Serial No. 213,045. 21 Claims. (Cl. 1—33.)

1. In a machine for operating upon heels, a support, a feeding member arranged to move heels over the support, means for holding the heels during the operation, and a guide for the heels as they are moved along the support, said guide being interposed between the holding means and the heels.



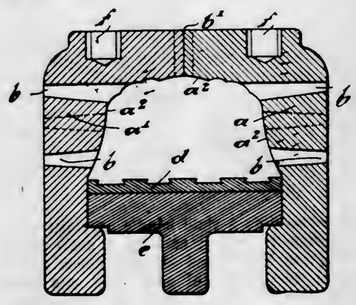
1,351,153. MACHINE FOR REMOVING SURPLUS MATERIAL. BUDD D. BOHANAN, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 24, 1916. Serial No. 110,942. 16 Claims. (Cl. 69—10.)

1. A machine for removing surplus material projecting beyond a seam which joins two or more flexible articles, having in combination, a knife, means for operating the knife, a combined support for the surplus material and cutting bed for the knife, and means for causing the edge of the knife to pass through the surplus material into contact with the bed.



1,351,154. BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to Locomotive Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1918. Serial No. 213,514. 5 Claims. (Cl. 122—469.)

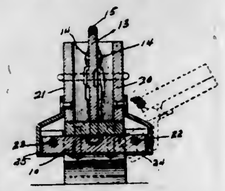
1. In a boiler comprising a front and a rear water leg, horizontal parallel rows of water tubes connecting them, and a furnace under the tubes bounded at the rear by a bridge-wall, the combination of a baffle between two rows of tubes but terminating short of each water-leg, a partition extending downwardly from the rear end of the baffle into the space behind the bridge-wall and terminating short of the bottom of the setting, a second baffle below and parallel to the first extending from the front water



leg and terminating short of the partition, and a superheater behind the bridge-wall.

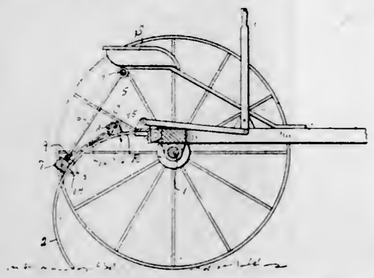
1,351,155. ORE-FLOTATION APPARATUS. JAMES B. BROWN, Denver, Colo. Filed Sept. 4, 1917. Serial No. 189,568. 9 Claims. (Cl. 83—85.)

1. In ore-flotation apparatus, a container divided into a feed chamber, a separating chamber provided with an overflow and a transfer-conduit which, adjacent its bottom, communicates with each of the chambers for the reception of material, and which has an outlet adapted to deliver material in sheet-like form onto the liquid level in the separating chamber, determined by the overflow, and means for introducing a gas into the lower part of the transfer-conduit.



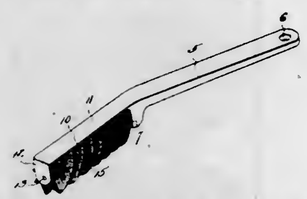
1,351,156. MANUFACTURE OF RUBBER TIRES OF THE SOLID OR BAND TYPE. CUTHBERT BURNETT and ALBERT EDWARD BURNETT, Trowbridge, England. Filed Oct. 17, 1919. Serial No. 331,457. 1 Claim. (Cl. 18—42.)

A tire mold comprising a pair of separable members having a mold chamber formed in their opposing sides,



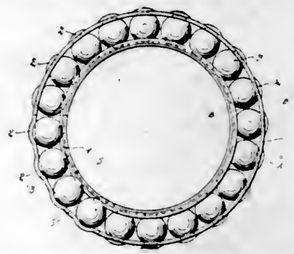
and also provided with spew receiving openings in their side walls out of the midplane of the mold and spew receiving openings in their outer walls at the opposing portions thereof.

1,351,157. MOLDING DEVICE. LEON E. BUTLER, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,527. 4 Claims. (Cl. 25—121.)



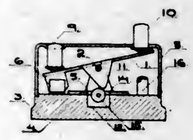
3. The combination with a base of a pattern plate having a relief on each side, each of which forms one half of a figure and is adapted to register with the other, means to hold said plate rigidly in position, a pair of channels pivoted to said base adapted to engage said plate with their edges and to be swung away therefrom and means to hold said channels tightly against said plate.

1,351,158. SULKY-RAKE. STEPHEN N. CANFIELD, Holly, Colo. Filed Apr. 21, 1920. Serial No. 375,595. 5 Claims. (Cl. 56—393.)



1. In combination with a portable body including a rake supported thereby for vertical swinging movement, a draw bar resting upon the tines of the rake, means for supporting the draw bar for swinging movement in a vertical path, inwardly directed rods pivotally engaged with the draw bar, a head secured to the forward end portions of the rods and resting upon the tines, and teeth carried by the head and extending between the tines of the rake.

1,351,159. ROTARY TOOTHBRUSH. WILLIAM N. CAVILEER and RUTH L. CAVILEER, Ray, Ariz. Filed Mar. 27, 1917. Serial No. 157,734. 1 Claim. (Cl. 15—37.)

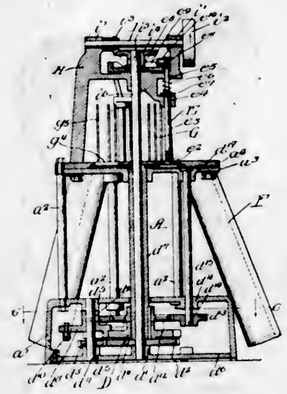


A brush embodying a rigid handle provided at one end with an L-shaped resilient backing, a shaft having one end fixed in the handle and disposed below and in parallelism with the horizontal portion of said backing, a brush body mounted on said shaft, and means for detachably connecting one end of the brush body with the vertical portion of the backing and preventing any accidental displacement of the brush body therefrom.

1,351,160. BALL-CAGE FOR AXIAL-THRUST BALL-BEARINGS. AXEL DANIELSSON, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed July 1, 1919. Serial No. 307,905. 2 Claims. (Cl. 64—59.)

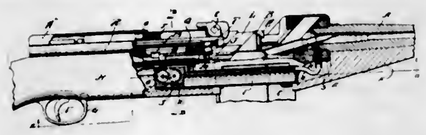
1. A ball bearing including a cage composed of an inner ring having a circumferential ball race in its outer periphery, an outer ring, a plurality of balls free to roll in the ball race and the outer ring being provided with spherical seats about its circumference to effect a proper spacing of the balls and to reduce the friction factor between the balls and cage rings to a minimum.

1,351,161. SWITCH. ERIK ARTUR FAGERLUND, Stockholm, Sweden. Filed Feb. 7, 1919. Serial No. 275,644. 2 Claims. (Cl. 200—72.)



1. In an electric switch the combination with a base and a contact swing lever, of a resilient locking device for said lever consisting of two coöperating members, one of said members being mounted on the lever and the other on the base, one of said members being in the form of an arm and the other member comprising a roller and a flexible pin carrying and forming the axle of said roller, substantially as described.

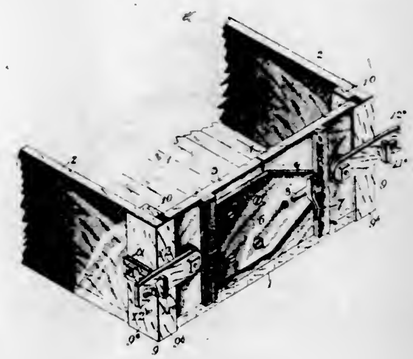
1,351,162. HERMETIC-SEALING DEVICE. CHARLES W. GRAHAM, Crestwood, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1916. Serial No. 72,600. 2 Claims. (Cl. 220—81.)



1. A means of forming hermetic joints in cans having ends secured thereto by double seams, comprising a can body having an outstanding seaming flange formed on its end, and a can cover having an outstanding seaming flange of greater diameter than said can body flange, said seaming flange of the cover folding around said body flange and lying parallel with the under surface of said body flange in the completed seam, together with a flat gasket formed with a bent periphery with one leg of the gasket extending under the body flange before the formation of the double seam is begun, so that when a double seam is formed by interfolding said body and said cover flanges portions of said gasket are in parallel contact with both the inner and outer surfaces of the body flange and the surface of the cover flange is in contact with said parts of the liner to form an hermetic joint.

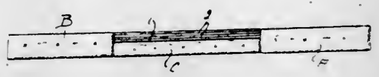
1,351,163. CAN-END-LINING MACHINE. CHARLES W. GRAHAM, Crestwood, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 4, 1916. Serial No. 82,056. 22 Claims. (Cl. 113—80.)

1. In a machine for assembling liners and can ends, the combination of a central intermittently rotatable carrier, means adapted to deliver thereto elements to be assembled, carriers which are intermittently rotatable and which are arranged and spaced around said central carrier and intersect therewith for the alinement of said elements with other elements, means for delivering said other elements to each of said spaced carriers, and sets of assembling devices arranged around the center of the central carrier and alternating with the element-delivering means thereof, whereby a plurality of elements are received by the central carrier at the same intermission during which a plurality of other elements are assembled with can ends, the central carrier and the other carriers having simultaneous receiving and assembling intermissions of movement.



1,351,164. GUN LUBRICATION. OLIVER B. GRAHAM, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed July 2, 1919. Serial No. 308,222. 5 Claims. (Cl. 42—1.)

1. A gun comprising a firing chamber, an automatic breech closure, means for automatically feeding ammunition to said chamber, a lubricant reservoir, a duct extending from said reservoir to the mouth of said chamber, and means actuated by the breech closure in its closing movement to force lubricant through said duct, said automatic breech closure and ammunition feeding means and lubricant forcing means being synchronized to spray lubricant on the ammunition in transit to the firing chamber.

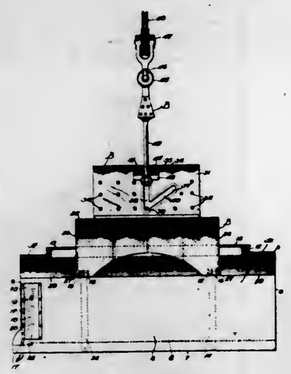


1,351,165. END-GATE. HIRAM E. GRIGGS, Wayne, Nebr. Filed Dec. 26, 1919. Serial No. 347,293. 2 Claims. (Cl. 296—55.)

1. In a device of the character described, the combination with the sides and bottom of a wagon box, of an end-gate hinged between its ends to open rearwardly; spaced cleats on the sides of the box for engaging the free ends of the end-gate sections to hold them against lateral movement while permitting them to move toward each other when the end-gate is opened rearwardly; rearwardly projecting keepers secured to the sides of the wagon box; corner latches pivoted at their inner ends to the hinged sections of the end-gate, and provided at their

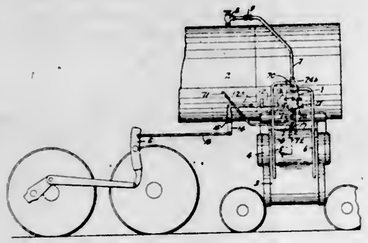
outer ends with means for engaging and disengaging said keepers, said means including longitudinal slots in engagement with said keepers to permit longitudinal movement of the latches on the keepers for permitting the sections of the end-gate to move toward each other when opened rearwardly without becoming detached from the sides of the wagon box; and means for securing the end-gate sections in rigid relation to each other.

1,351,166. MATTRESS. ELIZABETH E. GUNDLACH, Madison, Wis. Filed Mar. 3, 1920. Serial No. 363,038. 1 Claim. (Cl. 5—13.)



A mattress comprising three separable sections, the intermediate section being of a thickness less than the thickness of the remainder of the sections and being of a length greater than each of the end sections, separable pads adapted to be superimposed upon said intermediate section to compensate for the difference between the thickness of said intermediate section and the remainder of the sections, and a sheeting of material impervious to moisture interposed between said intermediate section and said pads.

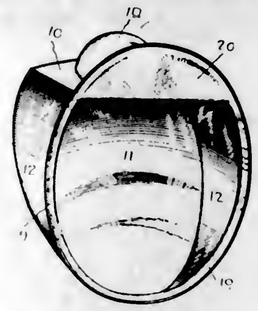
1,351,167. CARGO-HANDLING APPARATUS. JAMES G. GUNN, Cherokee, Iowa. Filed Jan. 2, 1920. Serial No. 348,827. 8 Claims. (Cl. 294—69.)



1. A cargo handling device comprising a receptacle, a lifting device detachably secured to said receptacle and being provided with a V-shaped slot, means disposed in said slot and adapted to be attached to a crane or simi-

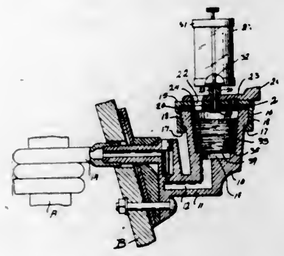
lar power device for raising and lowering the receptacle and its attached lifting device when the said means is in

one arm of the V-shaped slot, and for dumping the receptacle when it is in the other arm of the slot.



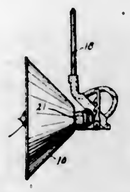
1,351,168. DRIFTING AND BY-PASS VALVE. CHARLES D. HILFERTY, Yonkers, N. Y., assignor to Locomotive Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1917. Serial No. 200,920. 5 Claims. (Cl. 121—137.)

1. In a locomotive, the combination of a valve chest, a main engine cylinder, a by-pass connecting its two ends, a conduit connecting the by-pass with the locomotive steam space, a differential piston valve for controlling the by-pass and for shutting off communication from the conduit to the by-pass, pressure on the smaller and on the larger areas of the piston valve tending to open it and to close it respectively, and means to subject the smaller area to live steam pressure at all times, and the larger area to a pressure substantially equal to valve chest pressure while the locomotive is moving above a low pre-determined speed and to live steam pressure when moving below that speed or standing still.



1,351,169. HEADLIGHT-REFLECTOR. PAUL M. HOTCHKIN, Chicago, Ill., assignor to National X-Ray Reflector Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1916. Serial No. 79,747. Renewed Feb. 16, 1917. Serial No. 149,149. 2 Claims. (Cl. 240—41.)

1. A device for reflecting light, comprising two substantially concaved reflectors, one of which is in a plane above the other, the lower reflector extending under the axis of the upper reflector, and side reflectors having curved walls, the said side reflectors having their edges

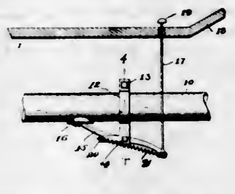


merging with the lower of the first mentioned reflectors, as and for the purpose described.

1,351,170. AUXILIARY AIR AND WATER SUPPLYING DEVICE. CHARLES W. JENKINS, Ellerson, Va., assignor of one-half to Lee B. Hancock, Richmond, Va. Filed Jan. 25, 1919. Serial No. 273,158. Renewed Apr. 21, 1920. Serial No. 375,651. 3 Claims. (Cl. 261—94).

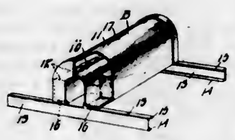
1. An auxiliary air device comprising a chamber having an outlet at one end, a cover detachably closing the opposite end of the container, and having an air inlet opening, a liquid container having a tubular stem extending through the cover and mounted thereon, a rotatable air valve through which said stem passes, the stem forming a pivot for the valve, and a needle valve passing through the container and controlling the outlet through said tubular stem.

1,351,171. LAMP-BRACKET. CARL ALFRED JOHNSON, New Bedford, Mass. Filed Apr. 2, 1920. Serial No. 370,848. 3 Claims. (Cl. 240—88.)



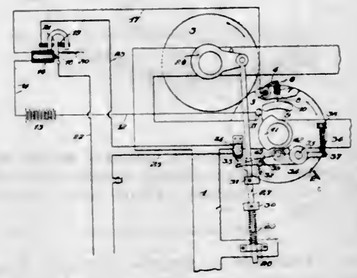
1. An adjustable lamp bracket comprising a supporting arm adapted to engage the flexible suspending conducting cord by one end and the lamp portion by the other end, said arm being jointed intermediate its ends, and a connector between said arms for retaining the members of said arm in adjusted position at different angles to each other.

1,351,172. SHOE-COUNTER. JOSEPH JONES, Cincinnati, Ohio, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 10, 1916. Serial No. 83,382. 1 Claim. (Cl. 36—68.)



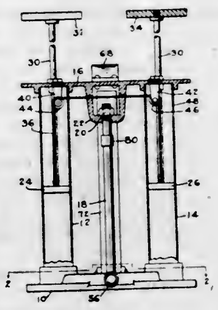
A heel stiffener adapted to interline the rear portion of a shoe and having wings arranged to terminate adjacent to the heel breast line of the shoe, the body of the stiffener being adapted to embrace the ball of the heel and terminating substantially at the junction of the vamp and top of the shoe, said stiffener having a vertical skived and lapped joint at its rear end comprising a plurality of rows of stitches arranged vertically of the stiffener to render the stiffener flexible widthwise without impairing its stiffness vertically.

1,351,173. MUFFLER CUT-OUT. ORSON F. KIRKPATRICK, South English, Iowa. Filed June 10, 1918. Serial No. 239,294. Renewed June 28, 1920. Serial No. 392,514. 1 Claim. (Cl. 251—10.)



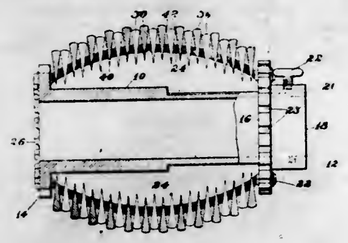
A muffler cut-out for automobile engines comprising an exhaust pipe having an opening in its lower side, a band clamped around the pipe in the rear of the opening and having an arm extending from its lower end forward and bent aside, a lever pivoted between its extremities to said lower end of the band and having its rear end bent aside, a plate carried by its front end and adapted to close said opening, an operating rod rising from the rear end of the lever, and a contractile spring connecting the lateral bent portions of the arm and the lever and passing the lever-pivot in its neutral position, whereby the lever is held in either extreme position.

1,351,174. SPRING-LEAF OILER. FREDERICK KLEINSMITH, Indianapolis, Ind. Filed Mar. 22, 1919. Serial No. 284,364. 3 Claims. (Cl. 184—1.)



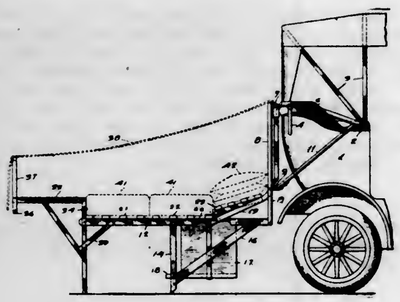
2. An oiler for leaf springs comprising an oil container formed with a chamber surrounding a central passageway and having closed ends and bottom with oil outlet passages at said ends, a clamping bolt extending through said central passageway for securing said oiler in position, the ends of said chamber being provided with extension bars extending each way from said chamber and adapted to embrace the edge of the spring and serve to guide the oil lengthwise of the spring from said container, substantially as set forth.

1,351,175. PRINTING-PRESS. FRANK J. LEHR, Rochester, N. Y., assignor to Stecher Lithographic Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1917. Serial No. 188,347. 5 Claims. (Cl. 101—234.)



1. In a printing press, the combination of a frame, an impression cylinder rotatively mounted therein and adapted to receive a work sheet, a rotatable plate cylinder normally in contact with said impression cylinder, a rock arm pivoted to the frame, means actuated by said impression cylinder for rocking said arm, and an electrically controlled bell crank pivoted to said rock arm and adapted to separate said cylinders in the absence of a work sheet on the impression cylinder.

1,351,176. AIR-PUMP. CHARLES G. LILLOS, Minneapolis, Minn. Filed Aug. 25, 1919. Serial No. 319,777. 2 Claims. (Cl. 230—27.)



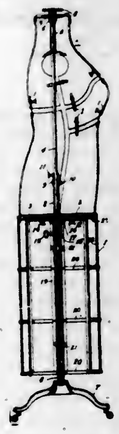
1. An air pump comprising a base, a pair of cylinders secured to said base, a plate fitting the tops of said cylinders, a lug depending from the middle of said plate, a rod secured to said base and to said lug, plungers in said cylinders, a pair of rods extending up from each of said plungers, foot-plates secured to the upper ends of each pair of rods, rollers mounted at the tops of said cylinders, and a cable running over said rollers and attached at its ends to said plungers.

1,351,177. FINISHING DEVICE. EDWARD B. LIMLE, Cincinnati, Ohio, assignor, by mesne assignments, to United-Xpedite Finishing Company, Berwick, Me., a Corporation of Maine. Filed Mar. 5, 1918. Serial No. 220,493. 31 Claims. (Cl. 12—105.)

4. In a finishing device, a revoluble flexible member, and a plurality of work-engaging members each provided with an elongated opening through which the flexible member extends.

1,351,178. FOLDING CAMPING DEVICE. JAMES F. LONG, San Francisco, Calif. Filed Aug. 29, 1919. Serial No. 321,243. 5 Claims. (Cl. 5—72.)

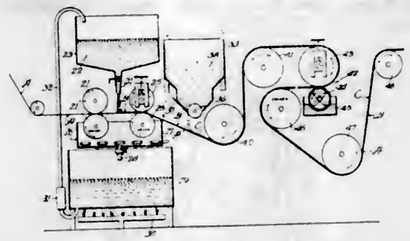
1. A folding camping device comprising a frame arranged to be attached to the rear of a motor vehicle or the like; vertically disposed stringers pivotally mounted at their lower ends to the frame and arranged to be lowered to extend horizontally from said pivotal points; suitable legs secured to the stringers; braces between said legs and stringers; a receptacle pivotally mounted between said braces; means for maintaining the receptacle in an upright position; a table portion pivotally mounted upon the upper ends of the stringers and having legs on one side of said table whereby the top of said table will extend above the top of the stringers when lowered to a horizontal position; and a U-shaped crate comprising three sections hingedly connected, one vertical section of said crate having depending legs to engage the bottom of the receptacle, and the horizontal or central section of said crate being adapted for locking engagement with the frame to hold the stringers in a vertical or folded position.



1,351,179. DRESS-FORM. MICHAEL LUERY and BEN S. NELSON, Chicago, Ill.; said Nelson assignor to Model Form Company, Chicago, Ill, a Corporation of Illinois. Filed Mar. 19, 1917. Serial No. 155,841. 5 Claims. (Cl. 112—18.)

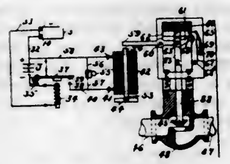
1. A dress form comprising a vertical standard, a clutch drum carried at the top of the standard, a form supporting rod extending downwardly through the drum, a clutch collar, rotatable elements carried by the collar

and disposed between the rod and the drum so as to lock the rod, and means for operating the collar to release said elements to unlock the rod.



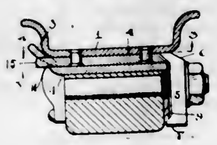
1,351,180. DRESS-FORM. MICHAEL LUERY and BEN S. NELSON, Chicago, Ill.; said Nelson assignor to Model Form Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1917. Serial No. 155,842. 3 Claims. (Cl. 223—18.)

1. A dress form comprising a base, a tubular standard extending upwardly from and fixed to the base, an adjustable body, a bracket secured to the base of the body and adjustably embracing the standard so that the body may be dropped down to the base into a compact arrangement, and a guide rod secured to the neck of the body and extending downwardly into the standard so as to support the body but permit reducing it by pressing down upon the shoulders.



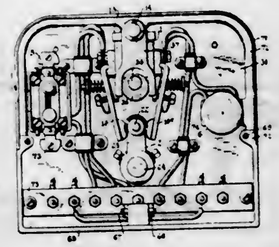
1,351,181. METHOD OF MAKING PREPARED ROOFING. WILLIAM F. MCKAY, La Grange, Ill. Filed Dec. 7, 1915. Serial No. 65,613. 8 Claims. (Cl. 91—67.9.)

8. Steps in the art of making roofing and the like which consist in coating a plastic surfaced sheet with a layer of contrastingly colored granular material, and in selected zones submerging the granules of the layer to



increasing depth into the plastic, thereby blending gradually the colors of the plastic and the granular layers.

1,351,182. TRAIN-CONTROLLING MEANS. JOHN HUGH MCQUILLEN, Philadelphia, Pa. Filed May 8, 1917. Serial No. 167,240. 3 Claims. (Cl. 246—29.)

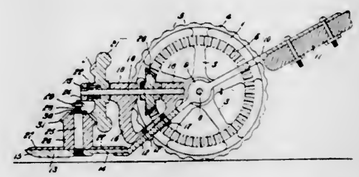


3. In a train control system, the combination of electromechanical control and signal means including a light influenced element and electromechanical control means, said electromechanical control means being arranged normally in an open circuit with a source of electric current supply, said open circuit being closed when said light influenced member is affected by light, and said closing of circuit operating the electromechanical control means, and means arranged to function as a visual signal and to affect said light influenced element, said visual signal means being located adjacent to one section or block of a railway and including an incandescent lamp arranged in a normally open circuit with a source of electric current supply, said circuit being closed by a locomotive or train in an adjacent block of the railway.

1,351,183. WHEEL WITH DEMOUNTABLE RIM. JOHN C. MANTERNACH and CHARLES W. GRESSLE, Cleveland, Ohio, assignors, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1916. Serial No. 101,013. 6 Claims. (Cl. 152—21.)

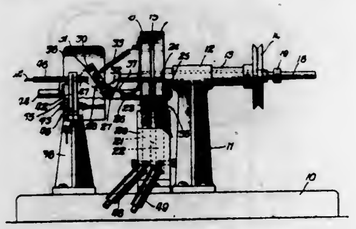
1. The combination with a wheel body; of a demountable rim therefor of the transversely split type, movable laterally onto and off from said wheel body; interfitting plates on the respective ends of said rim adapted to lock the same against relative lateral movement; and means on said wheel body adapted to engage said plates to draw the same, and thereby such rim-ends, together as said rim is placed in position on said wheel body.

1,351,184. CIRCUIT-CONTROLLER. WILLIS S. MORSE, New York, N. Y., and CLARENCE T. EVANS, Milwaukee, Wis. Filed Feb. 18, 1916. Serial No. 79,101. 22 Claims. (Cl. 200—6.)



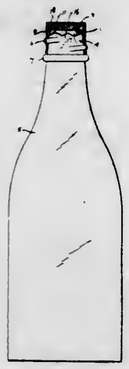
1. The combination with an oscillatable switch arm, and opposed contacts yieldingly mounted thereon, of an electromagnetic ratcheting mechanism to effect adjustment of said arm in steps and a contact member located between said opposed contacts and movable bodily in opposite directions for engaging said contacts selectively.

4. The combination with an oscillatable switch arm and a plurality of sets of opposed contacts mounted thereon for movement therewith, of a contact member located between said opposed contacts and movable bodily in a single direction for interrupting circuit between one set of opposed contacts while engaging another of said contacts.



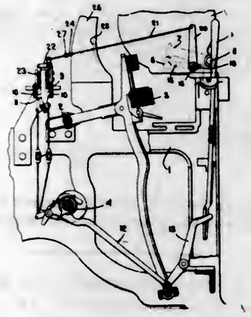
22. In a circuit controller, the combination with an electric switch mechanism, of an electromagnetic ratcheting mechanism for adjusting one of the elements of said switch mechanism, said mechanisms being readily separable, an inclosing casing for said mechanisms having a removable wall for supporting said ratcheting mechanism and means on the exterior of said wall and operatively connected to a member included in said ratcheting mechanism for indicating the position of said element, said means being manually operable to effect direct adjustment of said element.

1,351,185. LAWN-TRIMMER. ERNEST E. MUZZY, Canton, Ohio, assignor of one-half to Charles H. Ritterbush, Canton, Ohio. Filed May 17, 1919. Serial No. 297,719. 1 Claim. (Cl. 56—255.)



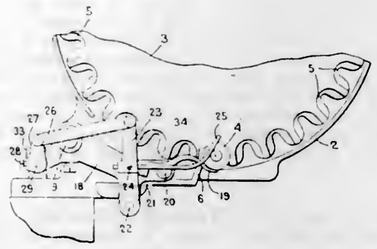
A lawn trimmer comprising a frame, a driving wheel mounted thereon, a stationary cutter bar, a rotary cutter bar coöperating therewith, a balance shaft operatively connected to said driving wheel, a ratchet member provided with beveled recesses carried by said balance shaft, a balance wheel rotatably mounted upon said balance shaft, spring pressed pins carried by said balance wheel and arranged to engage the depressions in said ratchet member and means operatively connecting the balance wheel with the rotary cutter bar, the momentum of the balance wheel thus causing the cutter bar to rotate for a number of revolutions after the driving wheel is brought to a stop.

1,351,186. PROCESS OF AND MACHINE FOR REMOVING COMBUSTIBLE COVERINGS. CARL A. NELSON, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1917. Serial No. 152,016. 14 Claims. (Cl. 81—9.5.)



7. In a device of the character described in combination, a rotatable spindle, an insulating disk secured to said spindle, current conducting rings mounted on said disk, means pivotally secured to one face of said disk, a current carrying conductor associated with said means, current conducting means connected with said rings and said conductor, a source of current supply, article holding means comprising a yielding member which clamps said article in a fixed position and with a protruding end to be operated on, means to force said current carrying conductor against a combustible surface of said protruding end whereby a circumferential groove will be burned in said coating and whereby when the article is withdrawn from said holding means said protruding coating which extends beyond said groove is removed by said holding means.

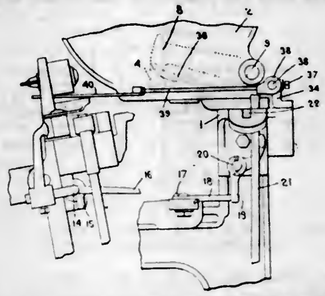
1,351,187. CONTAINER. PATRICK H. QUINN, Somerville, Mass. Filed Dec. 15, 1919. Serial No. 345,112. 2 Claims. (Cl. 215—13.)



1. A container of the class described comprising a body including an exteriorly threaded neck, a shoulder formed inwardly of the neck closely adjacent the mouth, a stopper penetrating jaw projecting from the inner marginal edge of the shoulder toward the mouth in substantially parallel relation to the inner wall of the mouth, said jaw coöperating with the inner wall of the mouth to form an endless groove, a paraffin coated stopper having a portion of its lower surface engaged with the jaw, a cap adapted to engage the neck over the mouth and paraffin coated stopper, said cap compressing the stopper inwardly of the mouth, whereby the same is penetrated by the stopper penetrating jaw, the marginal edge of the stopper being forced inwardly of the neck into the groove.

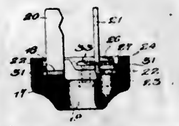
1,351,188. AUTOMATIC FILLING-REPLENISHING LOOM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 20, 1919. Serial No. 339,330. 6 Claims. (Cl. 139—85.)

1. An automatic filling replenishing loom comprising a rotary hopper containing a supply of separately supported fresh filling carriers, means for detecting absence of a fresh filling carrier from the hopper at a predetermined point in its rotation, and mechanical means controlled by the detecting action of the detecting means to effect the stopping of the loom.



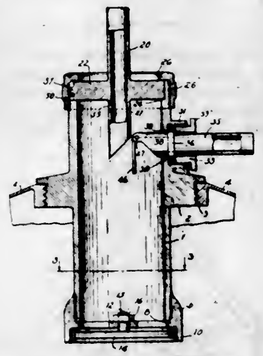
1,351,189. AUTOMATIC FILLING-REPLENISHING LOOM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 20, 1919. Serial No. 339,331. 7 Claims. (Cl. 139—85.)

1. An automatic filling replenishing loom comprising a hopper containing a supply of fresh filling carriers for successive transfer to the lay, means for detecting a predetermined depletion of said supply, loom stopping means, weft fork mechanism operative to effect actuation of the loom stopping means, and means controlled by the detecting action of the detecting means acting to render the weft fork mechanism operative to effect the actuation of the loom stopping means.



1,351,190. AUTOMATIC FILLING-REPLENISHING LOOM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 20, 1919. Serial No. 339,332. 7 Claims. (Cl. 139—85.)

1. An automatic filling replenishing loom comprising a hopper containing a supply of fresh filling carriers for successive transfer to the lay, means for detecting a predetermined depletion of said supply, loom stopping means, protector mechanism operative to effect actuation of the loom stopping means, and means controlled by the de-



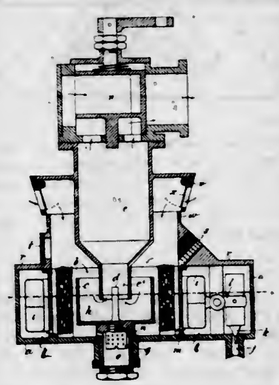
tecting action of the detecting means acting to render the protector mechanism operative to effect the actuation of the loom stopping means.

1,351,191. ELECTRICAL CONNECTING DEVICE. MAXIMILIAN SIDON, Bridgeport, Conn., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1916. Serial No. 133,110. Renewed Feb. 13, 1920. Serial No. 358,409. 2 Claims. (Cl. 173—343.)

1. A device of the class described, comprising a cap, a contact blade having an offset or base provided with an elongated slot, a binding plate over said offset, and a screw passing through said binding plate and said offset into said cap.

1,351,192. VACUUM MILK-RELEASER CHAMBER. CHARLES E. SOMERS, Milwaukee, Wis., assignor to B-V Milking Machine Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 17, 1917. Serial No. 191,697. 19 Claims. (Cl. 31—98.)

1. In a milking machine, the combination of a releaser chamber provided with a valved outlet and a milk inlet, of an air outlet duct leading from the upper portion of said chamber, open at its lower end and having a smaller opening at one side, and means for substantially closing the end of said duct during the final portion of a suction period.

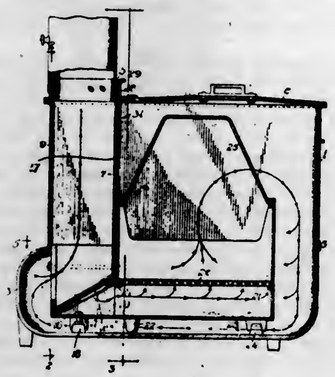


5. In a milking machine, the combination of a releaser chamber provided with a valved milk outlet port, a set of converging ducts projecting through the walls of said chamber near its upper end, and adapted to serve as milk inlet and air outlet ducts respectively, a swinging valve adapted to alternately close the inner ends of said ducts, the ends of said ducts being faced off each in a plane which said valve assumes when swung to closing position thereon, one of said ducts being also provided with an aperture through which air may pass from the releaser chamber into the duct after the valve has been closed upon the end thereof, and means for detachably coupling said ducts to the releaser chamber adapted to permit a removal of the ducts and valve to facilitate cleansing the same.

9. In a milking machine, a releaser chamber provided with removable air outlet and milk inlet fittings extending into the chamber adapted to be non-rotatably adjusted into and out of position upon the walls of said chamber, and means exterior to the chamber for detachably connecting said fittings to the chamber wall, adapted to engage and hold the fittings to the wall under clamping pressure, in their positions of proper adjustment.

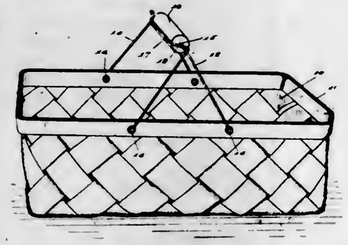
12. In a milking machine, the combination with a releaser chamber having milk inlet, air outlet, and milk outlet ports, of a valve for the milk outlet port, adapted to close inwardly, and a valve for the milk inlet port adapted to close when the vacuum is relieved in the chamber, said valve being arranged to also cover the outlet port when air is withdrawn from the chamber, together with means for allowing a relatively slow withdrawal of additional air after the air outlet port is closed by said valve.

19. In a milking machine, the combination with a vacuum chamber open at its lower end, a collar having a valve seat therein adapted to fit over the lower end of the vacuum chamber, a valve suspended from the collar adapted for limited movement therein, said chamber being also provided with removable coupling fittings adapted for connection with the milk inlet and air outlet passages respectively, and a valve adapted when in one position to seat against the inner end of the milk inlet fitting, and when in the other position to seat against the inner end of the air outlet fitting and preventing milk from entering the air outlet, said air outlet also having an aperture near the point of exit from the chamber, adapted to permit an additional withdrawal of air after the valve has closed the end thereof.



1,351,193. PRODUCTION OF GASEOUS FUEL FOR INTERNAL-COMBUSTION ENGINES. ALFRED WILLIAM SOUTHEY, London, England, assignor to Southey Gas Producers Limited, London, England. Filed Aug. 16, 1916. Serial No. 115,199. 10 Claims. (Cl. 48—211.)

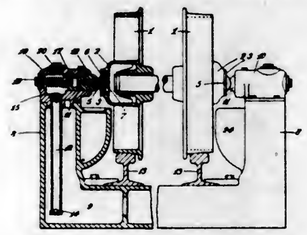
1. The method herein described of making gaseous products which consists in producing a flame, conducting



said flame into a restricted passage so as to reduce the cross sectional area of the flame and thus obtain a zone of high temperature, and subjecting liquid fuel to the flame at said restricted zone of high temperature.

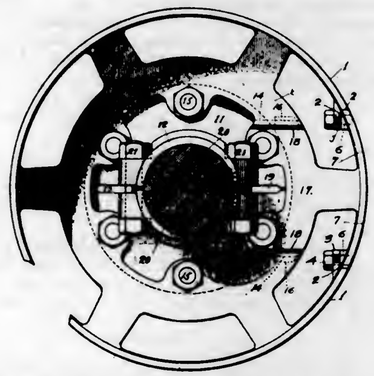
1,351,194. TANK-HEATER. OSCAR A. WENBERG, Batavia, Ill., assignor to United States Wind Engine & Pump Company, Batavia, Ill., a Corporation of Illinois. Filed Apr. 6, 1917. Serial No. 160,154. 13 Claims. (Cl. 126—367.)

7. A tank heater comprising an outer casing to be immersed in the water, a fire-box in said casing having a grate, an ash receptacle underneath said grate, means for supplying air to said fire-box to support combustion, and a passage for conducting substantially all the hot burned gases underneath said ash receptacle and along the sides thereof and along the sides of the fire-box, said passage being located adjacent the walls of said outer casing, whereby a large heating surface is provided.



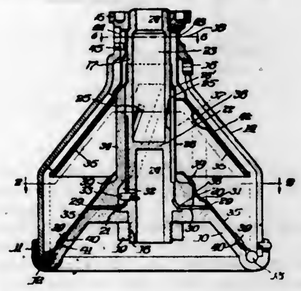
1,351,195. BASKET. HARLAN B. WHITE, Crothersville, Ind. Filed May 22, 1920. Serial No. 383,541. 5 Claims. (Cl. 217—125.)

1. A double-bail basket, comprising a basket with two separably movable wire bails pivotally attached thereto, one of said bails being provided with a carrying handle on its base, and the other bail being provided with an offset base portion which provides hooks which hook around the handle on the first bail.



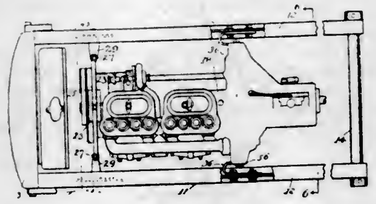
1,351,196. MEANS FOR OILING THE WHEELS OF TRAMWAY AND LIKE VEHICLES. TOM ABBOTT, Pontyclun, Llantrisant, Wales. Filed Jan. 27, 1920. Serial No. 354,489. 4 Claims. (Cl. 64—24.)

1. An oiling apparatus for track-guided vehicles, comprising a stationary cylinder located at right angles to the track, a spring-pressed plunger in said cylinder and provided with passages communicating with a source of oil supply, a spring-pressed plate adapted to be inserted in the hub of the vehicle wheel, and coöperating means carried by the plate and plunger for compressing both of said



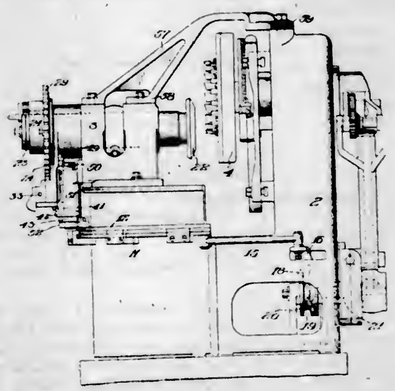
members against the action of their springs, thereby to permit the passage of oil from the plunger into the hub of the vehicle.

1,351,197. SPLIT PULLEY. HORACE T. ADAMS and HUGO ALTMAYER, San Francisco, Calif. Filed Sept. 2, 1919. Serial No. 321,248. 8 Claims. (Cl. 64—18.)



1. A split pulley comprising a hub having an annular flange; a rim detachably mounted upon the flange and having an opening in one side thereof; and a rim segment arranged to seat within the opening in the rim and to be detachably connected to the hub flange.

1,351,198. CREAM-SEPARATOR BOWL. CARL OSCAR ANDERSON, Springfield, Ill., assignor, by mesne assignments, to Thorne Brothers, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1918. Serial No. 228,302. 15 Claims. (Cl. 233—29.)

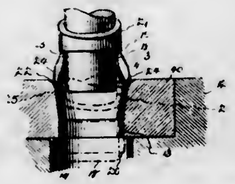


1. In a separator bowl of the class described including a base, a shell associated therewith, and means for holding the same in assembled relation, the combination with an inlet tube carried by said base, said tube having a milk-receiving chamber and a plurality of feed ports communicating therewith, and also provided at its exterior with a series of milk distributing channels into which said ports discharge, of a distributer sleeve surrounding said inlet tube and forming the outer wall of said distributing channels, whereby to direct the flow of the whole milk to the lower portion of the bowl, and a liner surrounding said distributer sleeve and provided with distributing channels in communication with the distributing channels of the inlet tube.

1,351,199. SELF-PROPELLED VEHICLE. OTTO ARMLEDER, Wyoming, Ohio. Filed Apr. 28, 1919. Serial No. 293,170. 8 Claims. (Cl. 180—64.)

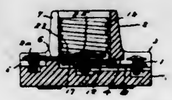
1. In a self-propelled vehicle, the combination of a chassis, a motor for propelling the vehicle, and means for mounting said motor on said chassis comprising a bent leaf-spring the edges of which are presented up and down and the respective limbs whereof are secured respectively to said chassis and to said motor.

1,351,200. GEAR-CUTTING MACHINE. EDWARD W. BULLOCK, SCHUYLER H. EARL, and GEORGE H. BRYAN, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1917. Serial No. 204,686. 19 Claims. (Cl. 90—56.)



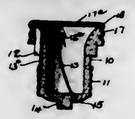
1. In a gear cutting machine, the combination with a blank spindle and an index wheel in fixed relation therewith, of a swinging index frame which is locked to the index wheel during the cutting operation, and actuating means which is normally stationary and is intermittently moved to unlock the index frame from the index wheel and turn it a predetermined distance after which it is again locked to the index wheel and returned to initial position, causing the index wheel to move a corresponding distance.

1,351,201. BAIL-SUPPORT. CHARLES T. CARLAND, Cleveland, Ohio. Filed Oct. 30, 1919. Serial No. 334,579. 1 Claim. (Cl. 220—96.)



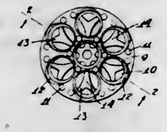
A bail support comprising a single piece of metal having an upright tubular bail clip at its upper end and a cross piece at its lower end, terminating in spaced depending legs the ends of which are turned in at their lower edges to engage the under side of a vessel rim and the cross piece having a notch in its lower edge through which the eye of the bail may extend.

1,351,202. PROCESS OF MAKING METAL BANDS OR RINGS. WILLARD R. CARROLL, Derby, Conn. Filed Jan. 5, 1918. Serial No. 210,422. 2 Claims. (Cl. 29—156.)



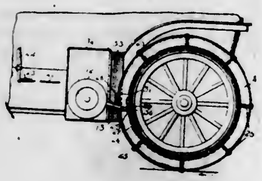
1. The process of making annular shaped articles from sheet metal consisting in forming a perforated disk of substantially uniform thickness and shaping said disk into a coniform ring or band, the ends thereof being of less thicknesses than a point between said ends and finally shaping said ring or band into an article having ends and sides of substantially uniform thickness.

1,351,203. PLUG-CUT-OUT BASE. ROBERT C. COLE, Hartford, Conn., assignor to The Johns-Pratt Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 27, 1919. Serial No. 279,562. 7 Claims. (Cl. 173—342.)



1. A plug cut-out base comprising an insulating socket having a slot in one side with an opening through the side wall into the bottom of the socket at the inner end of said slot, said opening being wider than the slot, and an opening through the side wall into the bottom of the socket on the opposite side from the slot, a threaded metallic shell located in said socket, conducting terminal strips extending from opposite sides through said openings into the socket and held from movement longitudinally out of the socket by the walls of said openings, the inner end of one terminal strip being in contact with the bottom of the shell, an insulating disk separating the inner end of the other terminal strip from the bottom of the shell, an insulating disk in the shell outside of the terminal strip that is in contact with the shell, and a screw turned in from the front through the parts and into the terminal that is insulated from the shell.

1,351,204. FUSE-PLUG. ALBERT F. DAUM, Pittsburgh, Pa. Filed Sept. 12, 1914. Serial No. 861,414. 8 Claims. (Cl. 200—130.)

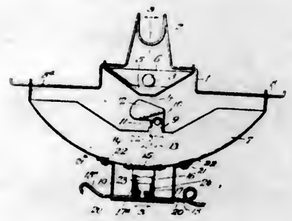


1. In a fuse plug having a cap, a terminal conductor carried by the plug and extending within the plug body with its inner end approaching the axis of the plug, said terminal coöperating with the cap in clamping the fusible element in position.

1,351,205. MOUNTING FOR CLUSTER-TOPS FOR RINGS. ABRAHAM L. ELIASOFF and CHARLES BIRNBAUM, New York, N. Y. Filed Mar. 3, 1919. Serial No. 280,336. 5 Claims. (Cl. 63—28.)

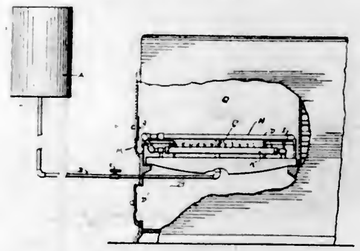
1. As an article of manufacture, a ring cluster mounting comprising a disk-like top having a series of annularly disposed open-ended sockets juxtaposed to the perimeter of said top, the material of said top between the juxtaposed edges of each of said sockets and the perimeter of said top being raised above the contiguous surface of said top in line of those radii of said top which are coincident with the radii of said sockets.

1,351,206. MEANS FOR AUTOMATICALLY APPLYING TIRE-CHAINS TO VEHICLE-WHEELS. WILLIAM W. FARNSWORTH, Littleton, Colo., assignor of one-third to Edward A. Ryan, Kansas City, Mo., and one-third to Edward H. White, Cumberland, Md. Filed Mar. 1, 1917. Serial No. 151,636. Renewed May 5, 1920. Serial No. 379,178. 26 Claims. (Cl. 152—14.)



1. Means for automatically applying an anti-skid chain to a vehicle wheel, embodying a carrier for the chain, and means for actuating the carrier to wind the chain about the wheel and deliver the chain entirely from the carrier, the first recited means also operating to interfasten both ends of the chain upon the wheel and at any point about the circumference of the wheel.

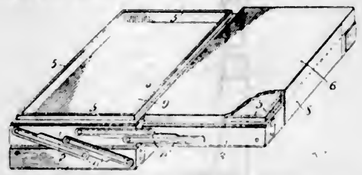
14. The combination of an anti-skid chain, a catch at one end of the chain, a catch engaging portion at the other end of the chain, and means for automatically applying the chain to the wheel, the said means embodying a carrier for the chain, said carrier embodying an arm to which the ends of the chain are detachably connected, means for actuating the carrier at will, said arm operating to deliver one end of the chain to the wheel, and also to form a guide for the catch for directing the catch into engagement with the said catch engaging portion for securing the ends of the chain together, and means for housing and protecting the chain and carrier, said housing having an opening through which the chain is delivered to the wheel, and a closure for the opening, said closure adapted to be opened by the actuation of the said carrier.



18. The combination of a vehicle body, and a chain carriage on the body, said carriage embodying a movable element to which both ends of the chain are detachably connected, and said element embodying means for delivering the chain to the wheel to be wound thereabout and for securing the ends of the chain together upon the wheel.

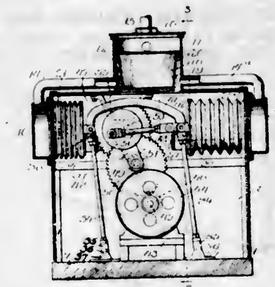
1,351,207. AUTOMATIC CIRCUIT-CLOSER. BENJAMIN GOLBIN, Chicago, Ill. Filed Apr. 2, 1917. Serial No. 159,293. 4 Claims. (Cl. 200—142.)

1. In a device of the class described, a carrier provided with an opening, fusible means covering said opening, a metal counterweight mounted on said material, an interrupted electric circuit, the contact points of which are positioned below said carrier, and means whereby when said fusible material is fused, the metal counterweight will establish an electric circuit through said contact points, said means comprising a plurality of metal balls suspended in the path of said counterweight and adapted to be dropped into engagement with said contact points.



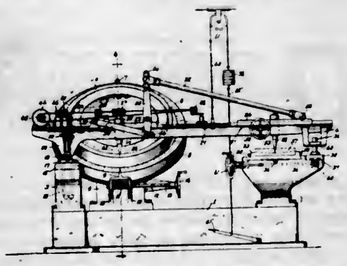
1,351,208. OIL-BURNER. JAMES WILLIAM HAMILTON, Wichita, Kans. Filed Dec. 10, 1918. Serial No. 266,158. 1 Claim. (Cl. 158—63.)

In an oil-gas burner, a coil comprising a series of straight stationary tubes, elbows connecting said tubes, outer tubes rotatably mounted upon said stationary tubes, the latter each having a series of transversely elongated apertures therein, and said outer tubes each having a series of round perforations registering with the respective apertures of the stationary tubes.



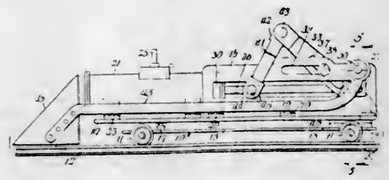
1,351,209. TRAY MECHANISM. MARY M. HAMMOND, Kansas City, Mo. Original application filed Feb. 14, 1916. Serial No. 78,283. Divided and this application filed Oct. 31, 1918. Serial No. 260,530. Renewed Feb. 13, 1920. Serial No. 358,403. 3 Claims. (Cl. 190—17.)

1. In a tray mechanism, two trays adapted to be superposed one upon the other, the lower tray having at its upper edge a continuous flanged portion extending all around said upper edge, the upper tray having side walls which embrace said flanged portion its full length when the trays are superposed one above the other, the flanged



portion holding the upper tray against lateral shifting relatively to the lower tray, a removable bottom fitted in the lower tray, and means supported by said flanged portion for supporting the removable bottom.

1,351,210. PUMPING MECHANISM FOR STATIONARY VACUUM-CLEANERS. PAUL HEILIGER, Chicago, Ill., assignor of one-third to Lyman J. Clarke and one-third to Elmer E. Clarke, Chicago, Ill. Substitute for application Serial No. 51,602, filed Sept. 20, 1915. This application filed Nov. 8, 1919. Serial No. 336,583. 9 Claims. (Cl. 230—2.)



1. In a vacuum cleaner system the combination with a casing, a suction chamber in open communication therewith, a pair of bellows mounted on upright movable supports within said casing, said supporting members being connected with the free end of said bellows, a rigid connecting bar mounted between the free ends of said bellows, and means for operating said bellows to create a vacuum within the system.

1,351,211. DIE SINKING, ENGRAVING, REPRODUCING MACHINE AND THE LIKE. JOSEPH F. KELLER, New York, N. Y., assignor to Keller Mechanical Engraving Co., Brooklyn, N. Y., a Corporation of New York. Filed May 2, 1917. Serial No. 165,871. 9 Claims. (Cl. 90—13.1.)

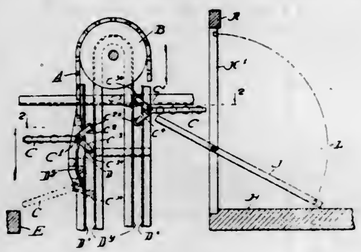
1. In a machine of the character described, a carrier bar mounted to swing about a universal joint, a tracer point and a cutter, both slidably mounted upon said bar, and means connecting tracer point and cutter whereby they can be slid simultaneously, the ratio of the distances of the tracer point and the cutter respectively from the center of the joint remaining constant for all positions of said tracer point and cutter.

1,351,212. EXCAVATING-MACHINE. JAMES A. MACKILLICAN and FRANK L. LIPCSEY, Hibbing, Minn. Filed Sept. 18, 1918. Serial No. 254,558. 9 Claims. (Cl. 214—134.)

1. In an excavating machine, in combination, a shovel adapted to be swung from a normal position in front of said machine into and out of dumping position above the same, means for giving said shovel a straight forward thrust in front of said machine, means located entirely to the rear of said shovel when at the front of the machine for guiding the same during its straight forward thrust, and means automatically brought into operation at the completion of the straight forward thrust of said shovel for swinging the same into its dumping position and to return the shovel to its normal position in front of the machine after said shovel has reached its dumping position.

1,351,213. CLIP-FASTENER FOR SPRINGS. FREDERICK MEADS, Toledo, Ohio. Filed Dec. 3, 1919. Serial No. 342,219. 1 Claim. (Cl. 5—29.)

As a new article of manufacture, a clip comprising an isosceles triangular body portion, necks adapted to extend from the base and intermediate the points of said body portion, rectangular shaped flaps provided upon said necks, said flaps adapted to be bent so as to form sleeves for receiving convolutions of coil springs, and the points of said body portion adapted to be bent for a like purpose.



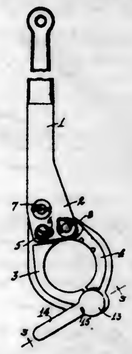
1,351,214. ELECTRIC SWITCH. NORMAN W. NUTT, Trenton, N. J. Filed Jan. 29, 1919. Serial No. 273,711. 2 Claims. (Cl. 173—351.)

2. In an electric switch of the type which has two current carrying contacts, a rotatable current carrying member having a body portion, upturned ends and upturned flanges all extending to the same side of the body portion, and a key shank extending through and secured to the body portion, there being spaces between the adjacent edges of the upturned ends and upturned flanges.

whereby upon the rotation of the rotatable current carrying member in the plane of its body portion an air disturbance will be created.

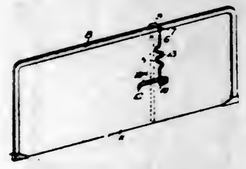
1,351,215. TRAY-ELEVATOR. SAMUEL OLSON, Chicago, Ill. Filed Jan. 5, 1914. Serial No. 810,357. 3 Claims. (Cl. 193—8.)

3. In a conveyer comprising a belt mounted for vertical travel, a tray pivotally engaged therewith and extending to one side of the axis of engagement, upper and lower guide rollers rigidly associated with said tray, and a guide channel positioned to receive the reactions of said rollers upon its opposite walls respectively, said lower roller being positioned to engage such guide below the plane of the tray, and the vertically extending part of the wall of the guide channel which supports the upper roller having a portion which is deflected away from the opposite wall for tilting the tray in its travel thereover whereby said tilting of the tray is accompanied by a slight bodily movement thereof about the lower roller in a direction for discharge of the load.



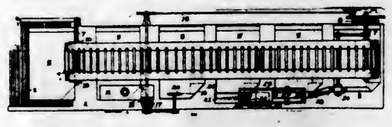
1,351,216. GRAPEFRUIT-CORER. MARIE WATSON PIFER, Sullivan, Ill. Filed May 20, 1920. Serial No. 382,853. 4 Claims. (Cl. 146—6.)

1. An article of the class described comprising a body member including a plurality of expansible spring arms, a cutting blade secured to each arm, and means operatively associated with said arms for flexing them and moving them toward and from each other.



1,351,217. PIPE AND CASING TONGS. LEROY L. RICHARD, Coalinga, Calif. Filed June 23, 1919. Serial No. 306,052. 4 Claims. (Cl. 81—66.)

1. A pipe and casing tongs comprising opposing jaws having at one end interfitting ears with pintle sockets, an associated handle at the other end to effect the gripping and release of said jaws, an axially turnable pintle fitting said sockets and hinging the jaws together, the section of the pintle fitting the socketed ear of one jaw being eccentric to the section of said pintle fitting the socketed ear of the other jaw, whereby the turning of the pintle on its axis will vary the relation of said jaws, and means



for fixing said pintle in the position to which it is turned on its axis consisting of a latch pin interlocking the pintle and an ear of one of said jaws.

1,351,218. WINDSHIELD-CLEANER FOR AUTOMOBILES. OLIVER C. RITZ-WOLLER, Chicago, Ill. Filed Nov. 30, 1917. Serial No. 204,577. 1 Claim. (Cl. 15—59.)

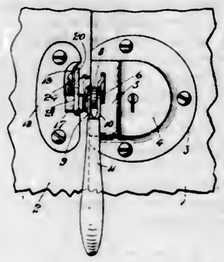
A device of the class described, comprising a supporting member adapted to slidably contact with the edge of a windshield, a wiper arm adapted to engage the outer surface of said shield, a handle disposed on the inner side of said shield, and a shoe integral with said handle and disposed at substantially right angles thereto and to said wiper arm, said shoe being adapted to contact with the inner surface of said shield to prevent said device from rocking during manipulation and to retain said handle spaced from said shield.

1,351,219. MACHINE FOR MAKING VALVED PAPER BAGS. MAXWELL C. ROSE, Cleveland, Ohio, assignor to The Cleveland-Akron Bag Co., Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1919. Serial No. 310,611. 10 Claims. (Cl. 93—8.)

5. In a paper bag-making machine, means for feeding a flat bag or tube forwardly with one longitudinal edge in advance of the body, means for tucking the corner of the advance edge of the bag or tube, means for creasing the bag or tube parallel to the end thereof, means adapted to apply paste between the creased folds of the bag or tube, and means adapted to press said pasted folds together.

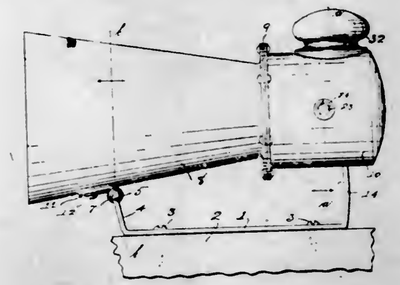
1,351,220. SKIASCOPE. NATHAN A. SHIGON, New York, N. Y. Filed Feb. 1, 1919. Serial No. 274,410. 10 Claims. (Cl. 88—20.)

1. In combination, a skiascope, a spherical reflecting mirror supported in proximity thereto, a chart adapted to be reflected in said reflecting mirror, said reflecting mirror being disposed relatively to the head of the examiner viewing the patient's eye through the skiascope, so that the virtual image viewed therein is at a distance rearwardly of the examiner's eye at variance with the distance between the reflecting mirror and the patient's eye.



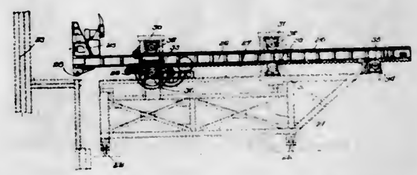
1,351,221. OPTICAL INSTRUMENT. NATHAN A. SHIGON, New York, N. Y. Filed Mar. 30, 1920. Serial No. 369,917. 5 Claims. (Cl. 88—20.)

1. In an optical instrument, a mirror, illuminating means arranged in proximity to the mirror and the latter being adapted to reflect light from the illuminating means, a chart arranged adjacent the mirror to be viewed by the patient, a second illuminating means arranged in position for illuminating the chart, a common support for said mirror, chart means, and both of said illuminating means, and electric conductors for both of said illuminating means and including said supporting means as a portion thereof.



1,351,222. LATCH CONSTRUCTION. DANIEL WEBSTER TOWER, Grand Rapids, Mich., assignor to Grand Rapids Brass Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Dec. 4, 1918. Serial No. 265,249. 4 Claims. (Cl. 292—242.)

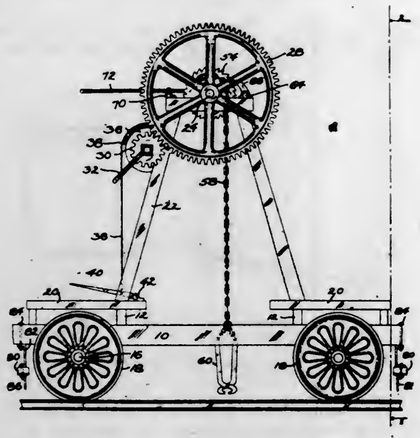
4. In a latch construction, a housing having a raised portion provided with a slot in the top thereof, a member connected to the housing and projecting outwardly from the top thereof, a handle having a divided upper end one part passing to each side of said member and pivotally connected thereto, each part being of flat relatively thin metal and one part passing into the housing through said slot, and the other part passing alongside of the housing and having a section turned laterally at its free end, a sleeve around and secured to said section, and a



spring in the housing acting against the part of the handle passed into the housing, substantially as described.

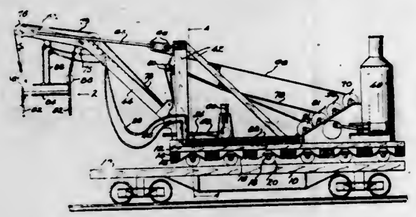
1,351,223. HORN. GEORGE F. VOIGHT, San Francisco, Calif. Filed Mar. 21, 1919. Serial No. 284,028. 6 Claims. (Cl. 116—144.)

1. The combination with the body portion of an oscillatory horn, embodying a resonator, a diaphragm and casing rigidly secured together, and means movable relative thereto disposed inside the casing for operatively engaging and vibrating said diaphragm, of an opening in the lower side of said casing, a bracket having one end disposed below said resonator and pivotally connected thereto and another end disposed below said casing and having a projection extending through said opening and operatively in engagement with said means, and a spring engaging said bracket and horn adapted to yieldingly support the horn against oscillation.



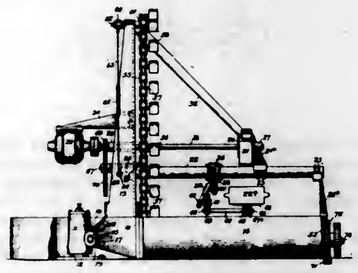
1,351,224. PUSHER-RAM-CHANGING STATION. WILLIAM LAMAR WILLIAMS, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1919. Serial No. 331,959. 24 Claims. (Cl. 214—23.)

1. In combination with a pusher-ram machine embodying, a movable carriage, and a reciprocatory ram supported thereby, said ram having a rack extending longi-



tudinally along its bottom and a head and shoe depending below said rack; a ram receiving and supporting station for receiving the ram head-first from the pusher machine, comprising, a frame, a continuous track supported thereby parallel with the direction of movement of said ram, said track having a supporting level and a lower level at its receiving end connected by an incline with said supporting level, and a plurality of structurally-independent ram-supporting roller trucks movable on said track and each provided with a toothed member for interlocking engagement with the rack of the pusher-ram, said trucks being respectively movable from the lower level of the track to the upper level thereof behind the head of a ram moving from its pusher machine on to the supporting station to support the ram on the supporting level of the track, substantially as specified.

1,351,225. MULTIPLE-HOIST PUSH-CAR. SAMUEL E. BARLOW, Denver, Colo. Filed June 28, 1919. Serial No. 307,396. 6 Claims. (Cl. 212—142.)

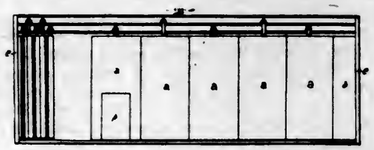


1. In a push car hoist, a frame, wheels thereon, and hoisting means mounted on the frame and adapted to operate between the wheels and within the frame, said hoisting means comprising a plurality of independently controlled elevating devices spaced side by side transversely of the car frame, and spaced means on the under side of the car, adapted to maintain rails held by said spaced devices in spaced relation when elevated.

1,351,226. DERRICK-CAR. SAMUEL E. BARLOW, Denver, Colo. Filed Mar. 1, 1920. Serial No. 362,274. 10 Claims. (Cl. 212—44.)

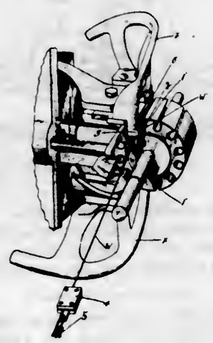
1. A derrick car, comprising a derrick platform and a series of long heavy rollers disposed transversely under said platform and journaled thereon.

1,351,227. MACHINE FOR MAKING MOLDS FOR FOUNDING. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill. Filed Dec. 12, 1919. Serial No. 344,378. 42 Claims. (Cl. 22—36.)



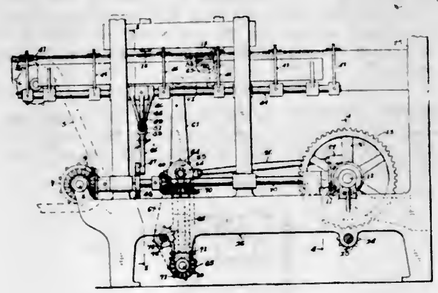
1. In a molding machine, the combination of a movable carriage, a sand projector comprising a stator and a rotor mounted on the carriage, a flask-support mounted on the carriage, means mounted on the carriage for feeding sand to the projector and means to permit relative lateral movement between the projector and the flask-support to fill all portions of the flask.

1,351,228. PUMP-PLUNGER. HANS M. BOE, Minneapolis, Minn. Filed Nov. 22, 1919. Serial No. 339,808. 3 Claims. (Cl. 103—63.)



1. A pump plunger comprising a rod, piston cups of flexible material placed back to back and having means for securing them to the end of said rod, metallic disks fitting within said cups and having a series of radial slits in their peripheral edges, a series of spring tongues being formed by said slits, the edges of abutting tongues lapping by each other and said tongues exerting an outward spring-like pressure on the edges of said piston cups.

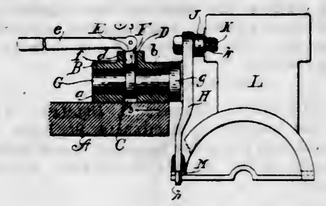
1,351,229. COLLAPSIBLE DOOR, PARTITION, AND THE LIKE AND OPERATING MECHANISM THEREFOR. ANGELO BOMBELLI, Milan, Italy. Filed Feb. 10, 1917. Serial No. 147,971. 2 Claims. (Cl. 20—20.)



1. The combination, with a frame having two vertical side posts and two horizontal tracks arranged at different levels near the top of said frame, of a folding door comprising a plurality of sections pivoted to one another along their vertical edges, one of said sections having one vertical edge pivoted to said frame, a series of pivoted levers connected with the frame and with the individual door sections in such a manner as to form therewith a system of lazy tongs, guiding means pivotally connected with each door section at its point of attachment to the pivoted levers, said means including rollers engaging said tracks, the rollers engaging one track alternating with the rollers engaging the other track.

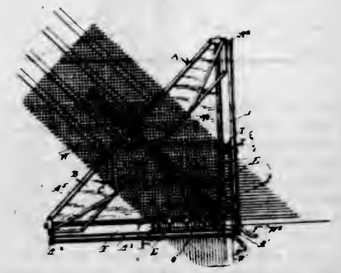
1,351,230. ARMATURE AND COIL WINDING MACHINE. PENROSE E. CHAPMAN, St. Louis, Mo. Filed Feb. 23, 1918. Serial No. 218,785. 9 Claims. (Cl. 242—13.)

1. In a winding device, means for producing windings of the character described consisting of the combination of means for winding "wire" with means for "offsetting" said wire as it comes to a "land" on a straight side in the coil being wound.



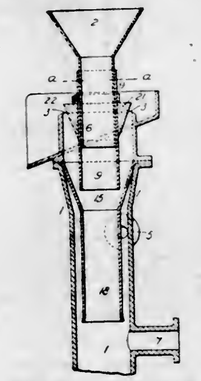
1,351,231. FEEDING MECHANISM FOR BOOK-STITCHING MACHINES. MARTIN CHRISTENSEN, Racine, Wis., assignor to Christensen Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed July 16, 1918. Serial No. 245,201. 9 Claims. (Cl. 1—7.)

3. In a book-stitching machine, the combination, with the stitchers, of a table, means for feeding the books along the table past the stitchers including a reciprocating rod, an oscillatory lever and an eccentric connection between said rod and lever, and means for varying the eccentricity of said connection to thereby vary the length of feed of said feeding means so that the binders of one book will be staggered with respect to those of the next book.



1,351,232. CYLINDER-BLOCK HOLDER. GEORGE J. S. COLLINS, Peoria, Ill. Filed Aug. 22, 1919. Serial No. 319,257. 4 Claims. (Cl. 29—89.)

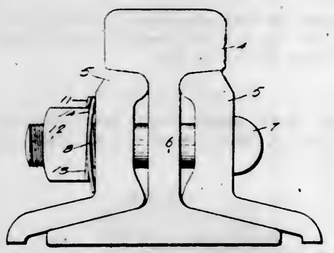
1. In a cylinder block holder, the combination with a base, of housings erected upon said base and having passages through them, the said housings being arranged with a space between them, a block or table connecting the said housings at the tops thereof, a clamping ring movable in said space, said ring having a stem passing upwardly through the table, means acting upon the table



for drawing the ring upwardly, a trunnion pin passing through the ring and the passages of the housings, and a carrier attached to the pin.

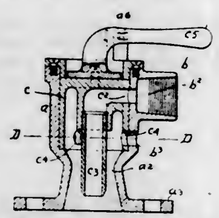
1,351,233. WIRE-LOOM. HARRY DENBY, Cleveland, Ohio. Filed Sept. 2, 1919. Serial No. 321,115. 11 Claims. (Cl. 139—39.)

4. In a wire weaving machine, a platform, a slotted guide member thereon, a transverse support elevated above said guide member, a member movable in said guide for engaging and propelling said fabric, and means mounted on said support for operating said fabric propelling member.



1,351,234. SEPARATOR FOR THE TREATMENT OF COAL, CLAYS, ORES, AND THE LIKE. JOHN MARRIOTT DRAPER, Bridgend, England. Filed Feb. 4, 1919. Serial No. 274,836. 6 Claims. (Cl. 83—82.)

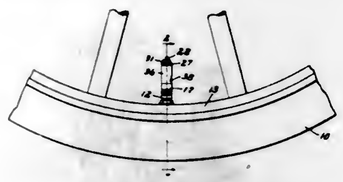
3. A separator comprising an outer tube or receptacle, an inverted conical inner chamber contained within the upper part of said receptacle and from the apex of which a tube extends downward, a central feed fitted with a



telescopic adjustable delivery tube to regulate the point of delivery in relation to the bottom or apex of the inverted conical chamber, a hydraulic connection for the admission of liquid to the outer tube or receptacle below the top of the inner chamber, and a circular or peripheral overflow ledge above the upper end of said chamber, substantially as specified.

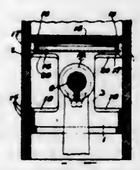
1,351,235. NUT-LOCK. ERNEST E. ELLMANN, FRANK A. KELL, and LEONARD L. ZACHARIAS, St. Louis, Mo.; said Kell and said Zacharias assignors to said Ellmann. Filed Nov. 13, 1919. Serial No. 337,700. 3 Claims. (Cl. 151—41.)

1. A nut lock comprising in combination with a screw threaded bolt, a rectangular concavo-convex washer formed of spring material, an opening formed in the center of the washer for receiving the bolt, a projecting tongue formed on said washer, said tongue extending from the opening to one edge of the washer, and a nut having inclined and flat faces, said inclined and flat faces forming vertical recesses at their conjunction, said vertical faces adapted to hold the nut against rotation in one direction when in contact with the projecting tongue, said flat and inclined faces extending entirely across the face of the nut, said vertical faces being deeper at their outer edges than their inner edges.



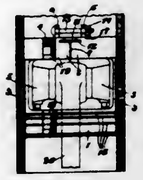
1,351,236. MIXING-VALVE. GEORGE B. EMERSON and CHARLES E. BUYSSE, Detroit, Mich. Filed Sept. 16, 1916. Serial No. 120,441. 1 Claim. (Cl. 48—180.)

In an apparatus of the kind described, a casing having an air passage formed therein, means for delivering air into said passage, said passage being contracted toward the delivery end thereof beyond the portion of said passage to which air is admitted, a pipe c^3 within the larger portion of said air passage and extending into and beyond the most contracted portion thereof at its delivery end, means for supplying gas to the inner portion of said pipe, said casing being adapted to be secured to the intake of the engine so that the suction of the engine shall come directly on the delivery end of said air passage.



1,351,237. SIGNAL FOR INDICATING SUBNORMAL PRESSURE IN PNEUMATIC TIRES. ARTHUR GARFIELD EWING, Los Angeles, Calif. Filed June 24, 1920. Serial No. 391,366. 5 Claims. (Cl. 116—34.)

1. In a pressure signal for pneumatic tires, the combination of a body portion adapted to be secured to the tire valve casing having a central bore and spring actuated plunger therein and an intermediate transverse wall, a horizontal slot below said transverse wall connecting the

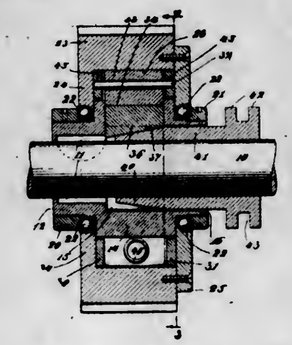


internal bore to atmosphere, an annular channel above said slot, a bevel face on the wall intermediate said slot and said channel and a sleeve member containing a whistle aperture covering said slot and said channel.

1,351,238. PISTON. JOHN FLAMMANG, St. Louis, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed Feb. 25, 1918. Serial No. 219,096. 19 Claims. (Cl. 74—108.)

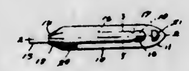
1. A piston, comprising a split upper ring, a lower ring, connections integrally uniting the upper and lower rings, a piston head detachably supported by the upper ring, and means coöperating with said connections to impart outward pressure to the upper ring to cause it to press against the wall of the cylinder in which the piston is mounted.

1,351,239. PISTON. JOHN FLAMMANG, St. Louis, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed May 23, 1918. Serial No. 236,194. 15 Claims. (Cl. 74—108.)



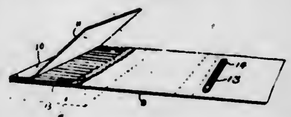
15. A piston, comprising a number of segmental sections arranged to press against the cylinder wall by the resiliency of the material of said sections, a head integral with said sections, and resilient members integral with said sections coöperating with said sections to press the sections outwardly against the wall of the cylinder.

1,351,240. CLUTCH. WILLIAM FRITZ, Philadelphia, Pa. Filed June 14, 1918. Serial No. 240,053. 3 Claims. (Cl. 192—11.)



1. In a clutch, a hub adapted to be fixed upon a shaft, said hub being formed with a plurality of radial slots, a member surrounding said hub, shoes disposed in said radial slots and adapted to bear outwardly on the said

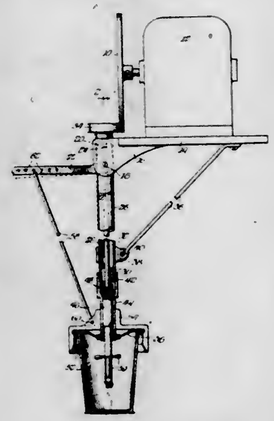
member, wedge blocks located under the said shoes in the said slots, means for forcing said wedge blocks outwardly,



and a common spring operated means for retracting each of said shoes when the first mentioned means is withdrawn.

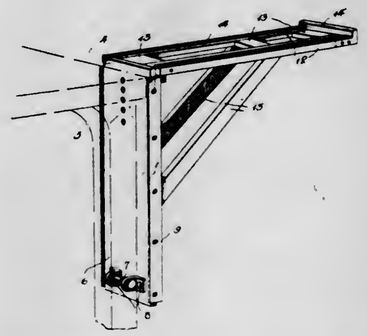
1,351,241. MATCH-PACKET. ANDREW W. GRAHAM, Buffalo, N. Y. Filed Sept. 23, 1919. Serial No. 325,806. 3 Claims. (Cl. 206—32.)

3. A match receiving packet for individual matches consisting of opposed sides having opposed match stem receiving grooves, opposed match head receiving recesses, and a constricted yieldable neck arranged to engage the match stem, there being a second constricted portion between the grooves and recesses yieldably engageable against the match adjacent the head.



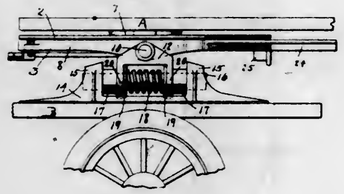
1,351,242. COMBINATION PACKAGE WRAPPER OR LABEL AND MATCH-PACKET. ANDREW W. GRAHAM, Buffalo, N. Y. Filed Sept. 23, 1919. Serial No. 325,807. 2 Claims. (Cl. 206—48.)

2. The combination with a packet for cigarettes and the like, of a member formed in two parts of relatively stiff material formed to conform to a portion of the surface of the packet, said parts being connected by a flexible portion forming a hinge, one of said parts being provided with an opening and being secured to the packet, the remaining part being arranged to cover and uncover a portion of the packet, a striking strip secured beneath the first part and exposed through the opening, and matches having their butts held beneath the first part and their bodies and heads positioned beneath the second part and normally covered thereby.



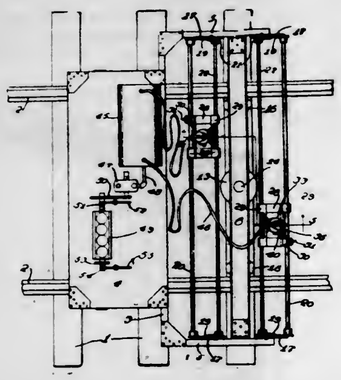
1,351,243. MIXING-MACHINE. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Feb. 21, 1919. Serial No. 278,357. 8 Claims. (Cl. 259—1.)

1. In mechanism of the class described, a continuously moving power member, a second power member adapted to be temporarily moved into engagement with said continuously moving power member, a stirring member driven by the second power member, a cover member adapted to close a receptacle detachably applied to the stirring member for the purpose of having it operate in said



receptacle, and mechanism connecting the cover member to the second power member adapted, when the cover is pressed by such a receptacle containing material to be stirred to throw the second power member into engagement with the first, and otherwise hold it out of such engagement.

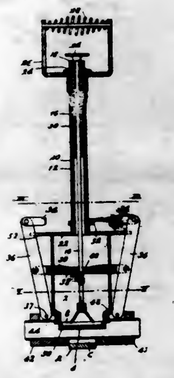
1,351,244. WORK-SUPPORTING RACK FOR SEWING-MACHINES. JOSEPH GUTSTEIN, Chicago, Ill., assignor to Hart, Schaffner & Marx, Chicago, Ill., a Corporation of New York. Filed Mar. 11, 1920. Serial No. 364,902. 1 Claim. (Cl. 248—20.)



In a clothes supporting rack for sewing machines, a standard provided with recesses at different heights therein, means carried by said standard for removably attaching the same to a sewing machine table, flange members secured to the sides of said standard and having their forward edges turned inwardly and spaced from the face thereof, a vertically adjustable member slidably seated within said flanges, a spring-equipped bolt carried by said last referred to member adapted to take into the recesses in said standard whereby to hold the said adjustable member at any predetermined height, clothes supporting bars carried by said adjustable member, and friction exerting means on said bars to prevent the accidental displacement of clothing therefrom.

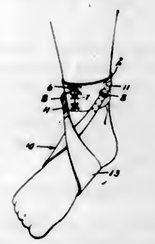
1,351,245. FIFTH-WHEEL. ERNEST F. HARTWICK, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 24, 1919. Serial No. 347,206. 7 Claims. (Cl. 280—33.1.)

1. In combination, a circular member having a pair of alined pins, stirrups mounted thereon and comprising a pair of spaced cheeks, a pair of pedestals adapted to be mounted on the body of a tractor and provided with upright brackets, short shafts mounted in the brackets in planes at right angles to the alined pins, a spring on each shaft, said cheeks extending down between the ends of the springs and the pedestals and inclosing said springs, and means mounted on a trailer adapted to engage said circular member.



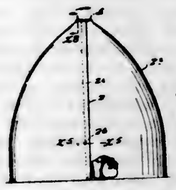
1,351,246. TAMPING-MACHINE. CORNELIUS G. HASTINGS, Glendale, Calif. Filed July 15, 1918. Serial No. 245,022. 6 Claims. (Cl. 104—12.)

1. In a device of the class described, the combination of a frame having track engaging wheels, a transverse guideway on the frame, an upright tamping device movable transversely on the guideway, and means for angularly adjusting the transverse guideway so as to move the lower end of the tamping device longitudinally of the frame.



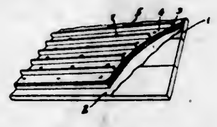
1,351,247. COMBINATION LADLE AND BABBITTING-JIG. WILBUR J. HEMPY, Kansas City, Mo., assignor to Hempy-Cooper Manufacturing Company, a Corporation of Missouri. Filed Dec. 19, 1919. Serial No. 346,009. 13 Claims. (Cl. 22—123.)

1. In a device of the character described, a bottom pouring ladle adapted to rest upon a bearing to be babbitted, means for controlling the outflow of molten metal from said ladle to the bearing, and a member associated with



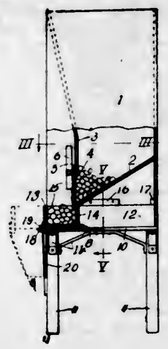
said ladle and arranged to occupy the position of a shaft in the bearing to mold the molten metal to receive such shaft.

1,351,248. ARCH-SUPPORT. WALTER C. HILL, Los Angeles, Calif. Filed Nov. 7, 1919. Serial No. 336,402. 7 Claims. (Cl. 128—166.)



1. An arch support including an ankle band, a stirrup adapted to pass under the instep to support the arch, and means to adjustably secure said stirrup to the ankle band.

1,351,249. TREE-PROTECTING APPARATUS. ORRA VAY HONSTEDT, Upland, Calif. Filed Feb. 13, 1919. Serial No. 276,858. 5 Claims. (Cl. 47—33.)

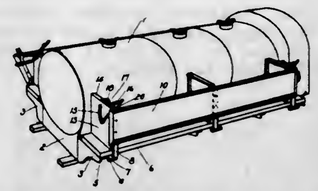


1. In a tree protector, a standard adapted to be adjusted to different heights; means on the upper end of said standard for supporting in either open or closed position a tree covering fabric; an arm pivotally mounted on said standard; adjustable means for retaining said arm at an angle from said standard; and means on the outer end of said arm for retaining the tree covering fabric in a non-covering position.

1,351,250. RUBBER-SET RIFFLE. JOE HORN, Kelvin, Ariz. Filed June 24, 1919. Serial No. 306,438. 4 Claims. (Cl. 83—88.)

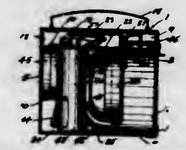
1. In a concentrating table or the like, a wooden deck, a layer of tar paper upon the deck, wooden strips upon the layer of tan paper, linoleum strips upon the wooden strips, and sheet metal riffle plates upon the tar paper between the wooden strips and between the linoleum strips, and water proofing cement coating for the bottom and side edges of the wooden and linoleum strips.

1,351,251. MEASURING AND DELIVERING BIN FOR POTATOES, &c. JAMES E. JEWELL, Kansas City, Mo. Filed Jan. 16, 1919. Serial No. 271,541. 6 Claims. (Cl. 211—9.)



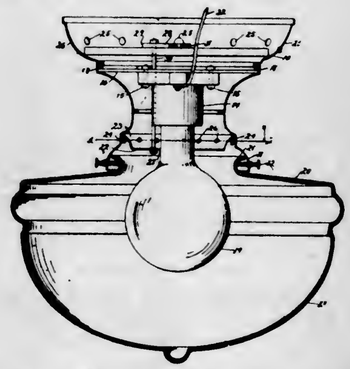
1. In a device of the character described, a hopper having a discharge opening at its lower end, a gate controlling said opening, a receptacle for receiving from the hopper through said opening and movable for discharging what it receives, and a collapsible funnel openable through opening movement of said receptacle, to receive the contents of the latter, and collapsible through closing movement of the receptacle.

1,351,252. VEHICLE-WHEEL. LINWOOD F. JORDAN, Portland, Me. Filed Sept. 30, 1918. Serial No. 256,197. 2 Claims. (Class 301—35.)



1. A vehicle wheel rim comprising two duplicate members, one member provided with locking tongues and the other member provided with tongue receiving sockets, said tongues and sockets being located on the inside of the rim members, and springs fastened at each end to the socket members and spanning said sockets.

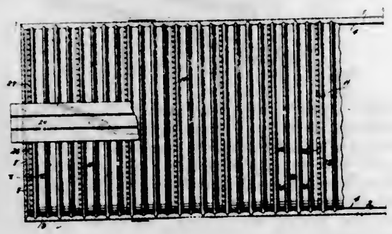
1,351,253. CAN-RACK. ANDREW A. KRAMER, Kansas City, Mo. Filed May 3, 1920. Serial No. 378,365. 3 Claims. (Cl. 280—5.)



2. In a vehicle tank construction, a tank, bolsters supporting said tank, can brackets carried by the bolsters, a floor board carried by the brackets, upstanding walls supported by the floor board, each wall comprising a plate having right angularly projecting flanges and arranged crosswise of the board, a side member extending substantially the length of the floor board and hingedly connected thereto, means connecting the side member to the upstanding walls, said means permitting limited swinging movement of the side member, and locking members carried by the upstanding walls and removably engaging the side member.

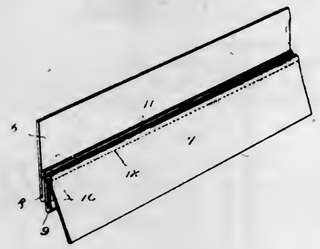
1,351,254. AUDIPHONE. CHARLES LARRICK, Los Angeles, Calif. Filed Mar. 26, 1919. Serial No. 285,377. 6 Claims. (Cl. 179—107.)

4. In an audiphone, a box, a cylindrical lining mounted in the front end of the box, a rectangular shell slid down into the box behind the lining, an amplifier mounted in the rectangular shell, and a transmitter mounted in the amplifier.



1,351,255. LIGHTING-FIXTURE. ABRAHAM LAZERSON, Chicago, Ill., assignor to Solar Illuminating Co., a Corporation of Illinois. Filed Jan. 26, 1920. Serial No. 353,964. 3 Claims. (Cl. 240—78.)

1. A lighting fixture comprising, in combination, a canopy having a collar adapted to engage with a globe

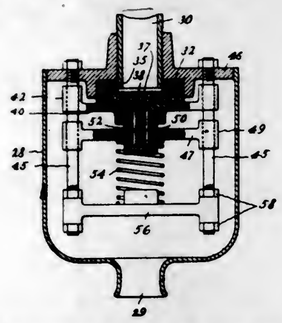


and carrying means to secure a globe in place, a plate having a reflecting surface on its lower side, said plate of the same shape as and slightly less in diameter than said collar, said plate having an opening for passage of source of light parts, an outwardly flaring rim on said plate adapted to contact with the interior of the canopy, said rim having ventilating openings.

1,351,256. CAR-ROOF. BENJAMIN FURMAN LIVELY, Lenoir City, Tenn., assignor of one-half to Raymond C. Dudley, Chicago, Ill. Filed Dec. 14, 1915. Serial No. 66,727. 9 Claims. (Cl. 108—5.)

1. In a metal car roof, in combination: roof sheets having upstanding transverse and V-shaped marginal corrugations, and having intermediate corrugations parallel with and of greater depth than said marginal corrugations, the marginal corrugations of contiguous sheets being lapped and double at their apices; whereby the middles of the sheets are stiffened correspondingly with their margins.

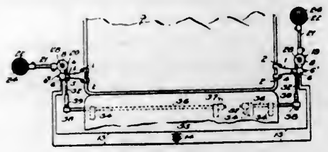
1,351,257. TROUSERS-WAISTBAND. JACOB MARCUS and JOHN F. BERGEN, Brooklyn, N. Y. Filed Feb. 28, 1920. Serial No. 362,170. 1 Claim. (Cl. 2—142.)



As a new article of commerce, a unitary waistband structure for trousers comprising a stiffener element and a liner element, said stiffener element being folded to provide a multiply formation along one of its longitudinal edges, and said liner element being folded along one of its longitudinal edges to provide a skirt in overlying relation to said folded edge of the stiffener, said stiffener and liner elements being jointed together by a line of stitches extending through the plies of their folded portions and the said stitches being adapted to be concealed by a ply of the liner element when in applied position.

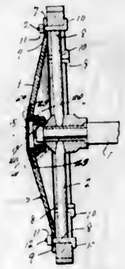
1,351,258. DRIP-PREVENTER AND THE LIKE. GORDON SPENCER MARSTON, Ravenscourt Park, England. Filed May 4, 1920. Serial No. 378,900. 4 Claims. (Cl. 53—3.)

1. Means for preventing liquids from running down the outside of the pouring spout of a liquid-containing vessel comprising a member to be carried by the spout and a second member loosely attached to the first mentioned member so as to be free to move and maintain a substantially vertical attitude, whatever the position of the vessel.

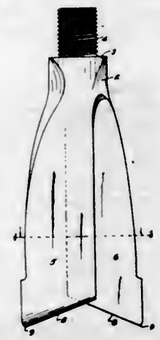


1,351,259. VALVE. LOUIS MASCHEK and CAMILLUS B. HIGGINS, Kansas City, Mo. Filed Oct. 28, 1918. Serial No. 260,023. 7 Claims. (Cl. 137—53.)

1. A valve consisting of a casing having inlet and outlet ports, a valve plug to close one of said ports, a yieldably supported member to normally hold said valve plug in closed position, and resilient means interposed between said member and the valve plug to hold the latter to its seat in case said member should be jarred away from said valve plug.



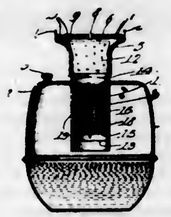
1,351,260. SIGNAL FOR MOTOR-VEHICLES. JOSEPH B. MERWIN, Lincoln, Nebr. Filed Sept. 2, 1916. Serial No. 118,263. 1 Claim. (Cl. 116—54.)



An indicating device for vehicles comprising a supporting bracket extending laterally from the vehicle, a signal, a signal arm adapted to move laterally in the arc of a circle from a normally vertical to a horizontal position having an enlarged joint member pivoted upon said bracket, a vertically movable signal operating rod eccentrically pivoted upon said joint member, a horizontally arranged actuating rock shaft, a crank pivotally connecting said shaft and operating rod, a manipulating lever fixed upon said rock shaft, and means for automatically illuminating said signal when in a horizontal position.

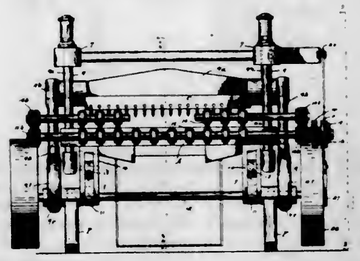
1,351,261. SHIELD FOR WHEELS. EDWIN E. MILLER, Tyrone, Pa. Filed Jan. 3, 1920. Serial No. 349,169. 1 Claim. (Cl. 301—37.)

In a device as set forth, a vehicle wheel, a shield plate conically dished and arranged adjacent one face of the wheel and having its marginal portion detachably secured to the felly of the wheel, the central portion of the conically dished shield plate having an opening axially alined with the hub of the wheel, the outer face of the shield plate in surrounding relation to the opening being rabbeted, a cap plate countersunk in the rabbet of the shield plate and provided with a cylindrical flange telescoping through the opening, and over the hub, and spring fasteners carried by the cylindrical flange and engaging the marginal wall of the opening of the conically dished shield to retain the cap in position.



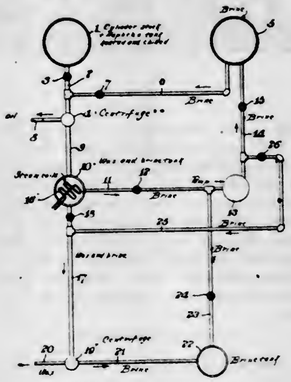
1,351,262. DRILLING-BIT. GEORGE NYMANNING, Los Angeles, Calif. Filed Jan. 9, 1920. Serial No. 350,464. 5 Claims. (Cl. 255—61.)

1. A fish-tail, rotary cutting bit comprising a butt or head portion with downwardly extending laterally spaced rigid cutting blades, the blades relatively offset to each other and a threaded shank extending upwardly from said butt.



1,351,263. FUMIGATING-CONTAINER. WENZEL J. SCHEFF, Manitowoc, Wis. Filed June 3, 1919. Serial No. 301,536. 1 Claim. (Cl. 299—20.)

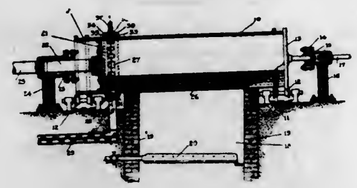
A fumigating container having a body portion, means for admitting a liquid into the container, an extended neck



member projecting a considerable distance into the body of the container, a screen mounted in the lower portion of said neck member, spaced wire rings, one of the rings having an integrally formed wire extending longitudinally of the neck of the container, the other ring having a looped portion slidably engaging said longitudinally extending wire, a spring operatively connected to the two rings and arranged to draw one of the rings toward the other, and a relatively large amount of absorbent material positioned between the two rings.

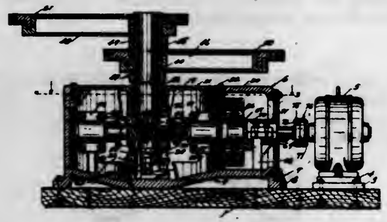
1,351,264. MACHINE FOR MAKING PLASTER-BOARD. JOHN SCHUMACHER, Los Angeles, Calif. Filed Jan. 23, 1919. Serial No. 272,765. 10 Claims. (Cl. 134—89.)

1. A machine for perforating plaster board and like products of that type which comprise a plastic filler interposed between cover sheets, including a die member, a punch member mounted for coöperation with the die member to form openings through the plaster board and leave one of the cover sheets in a torn condition at the openings, means for advancing the plaster board between the die member and punch member, and means for subsequently restoring the torn portions of the said cover sheet to substantially their original positions.



1,351,265. PROCESS FOR SEPARATING SUBSTANCES FROM LIQUIDS. PHILIP T. SHARPLES, St. Davids, Pa. Filed June 28, 1919. Serial No. 307,472. 10 Claims. (Cl. 196—24.)

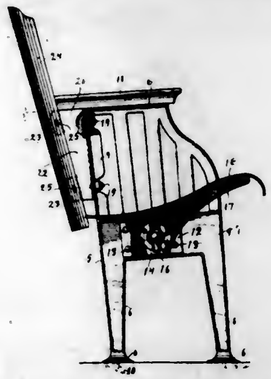
1. In the separation from a liquid of a substance soluble therein at normal temperatures and insoluble at lower temperatures, the process which consists in chilling said liquid to a temperature adapted for precipitating said substance and centrifuging the liquid containing said substance together with a liquid heavier than and immiscible with said substance, thereby separating said substance



from thhe containing liquid, floating said substance on said heavier liquid and separately discharging said substance and the liquid from which it is separated.

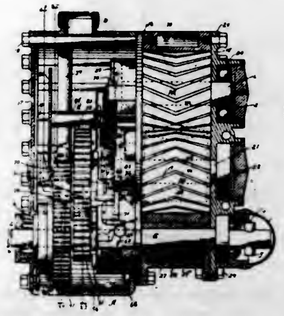
1,351,266. APPARATUS FOR DISTILLING MINERAL OIL. ERNEST VICTOR STONE, Los Angeles, Calif. Filed Nov. 14, 1918. Serial No. 262,519. 3 Claims. (Cl. 196—12.)

3. An apparatus for distilling mineral oils, comprising a retort rotatably mounted, a pipe for supplying oil thereto, a second pipe for leading gases and vapors therefrom, means for heating the retort, iron rods extending substantially throughout the length of the retort loosely mounted in the retort so that the rotation of the retort and the tumbling of the iron rods will pulverize the carbon, and means for discharging the carbon from the retort.



1,351,267. PUMPING POWER. WILLIAM H. TEEL, Los Angeles, Calif. Filed Aug. 26, 1919. Serial No. 319,997. 1 Claim. (Cl. 74—36.)

A pumping power comprising a housing having side walls and a top, a power shaft mounted through the side walls of the housing horizontally and adapted to be connected with an electric motor, a main operating shaft journaled in the base of the housing and extending upwardly through a bearing in the top thereof, a worm gear mounted upon the main shaft within the housing, a worm and shaft adapted to operate upon the gear, means for connecting the worm shaft with the power shaft, and eccentrics mounted upon the operating shaft above the top of the housing.

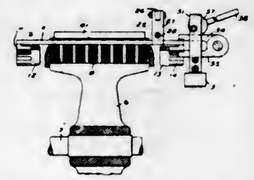


1,351,268. THEATER-CHAIR CONSTRUCTION. RAY TRAVERS, New London, Wis., assignor to The Wisconsin Chair Company, Fort Washington, Wis., a Corporation of Wisconsin. Filed July 13, 1916. Serial No. 108,976. 4 Claims. (Cl. 155—85.)

1. A standard for a theater chair, comprising a cast metal standard member having leg portions, a medial portion and a back portion, a bracket formed of stamped sheet metal connected at its opposite end portions to the medial portion of the standard member and projecting medially outwardly therefrom, and a back bracket formed of stamp sheet metal connected to the rear edge of the

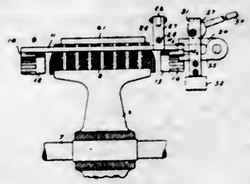
back portion and projecting rearwardly therefrom and having back attaching portions which extend at an angle from said rearward portion and away from each other.

1,351,269. COMPRESSOR AND MOTOR-STARTER. MORRIS C. WHITE, Los Angeles, Calif., assignor to M. C. White Company, Los Angeles, Calif., a Corporation of California. Original application filed Nov. 28, 1914, Serial No. 874,384. Divided and this application filed June 23, 1916. Serial No. 105,418. 5 Claims. Cl. 230—37.)



1. Apparatus of the character disclosed, including a drive shaft, a fluid compressor having a shaft, primary coupling means between the driving shaft and compressor shaft, a clutch controlling the said coupling means, a secondary coupling means connecting the two shafts and arranged to rotate them in a reverse relation and maintain the same direction of rotation of the drive shaft when it is actuated by the compressor, and an automatic clutch in the secondary coupling means constructed to become inoperative when the drive shaft again becomes the source of power.

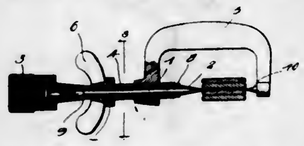
1,351,270. SQUIRREL-CAGE WINDING CONSTRUCTION. NATHAN WILKINSON, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 27, 1914. Serial No. 859,121. 10 Claims. (Cl. 172—120.)



1. As an article of manufacture, a cage-like device including a plurality of metallic bars of the type of copper and a pair of metallic rings of the type of copper directly united to said bars by welds extending throughout the full cross section of the united parts.

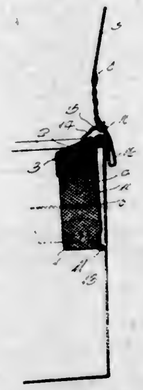
2. In a squirrel-cage rotor, a core of magnetic material having slots, conductor bars disposed in said slots, and

end rings, one at each side of said core, directly united to said bars by welds extending throughout the full cross section of the united arts.



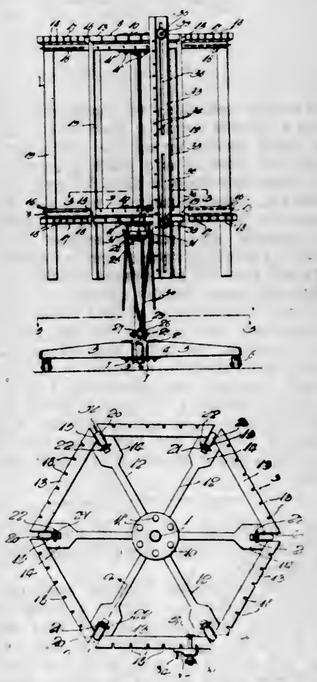
1,351,271. METHOD OF AND APPARATUS FOR ELECTRIC WELDING. NATHAN WILKINSON, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Aug. 27, 1914, Serial No. 859,121. Divided and this application filed June 28, 1919, Serial No. 307,803. Renewed Mar. 1, 1920. Serial No. 363,097. 8 Claims. (Cl. 219—10.)

1. The method of building a cage-like device comprising bars of conducting material and end connecting members disposed at the ends of said bars which consists in disposing a core of magnetic material within the inner periphery of said bars, completing the magnetic circuit about a given bar to be welded by magnetic material coacting with said core, and passing an alternating current through the point of contact of the bar to be welded and its associated end connecting member.



4. In apparatus for electrically welding conductive bars inductively associated with a core of magnetic material to an end ring, a source of alternating welding current, and means to coöperate with the magnetic material of the core for establishing a magnetic field about the bar to be welded of intensity substantially choking off any current in said bar other than the useful welding current.

1,351,272. SPRING-LEAF SPREADER AND LUBRICATOR. LOUIS E. WOOD, Farrell, Pa. Filed Mar. 8, 1920. Serial No. 364,334. 2 Claims. (Cl. 81—3.)



1. A spring leaf spreader and lubricator comprising a tubular lubricant conducting member having a leaf spreading wedge at one end and lubricant feeding means at its other end, a screw for projecting said member to spread the leaves of the spring, the operating means of said screw being located adjacent to said lubricant feeding means, and a spring-straddling yoke through which the screw is threaded, said screw being tubular, receiving said lubricant conducting member therein, and being rotatable about said member.

1,351,273. SOAP-CONTAINER. LOUIS E. WOOD, Farrell, Pa. Filed May 17, 1920. Serial No. 382,146. 4 Claims. (Cl. 45—28.)

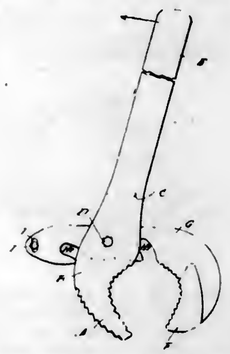
1. A soap holder comprising a receptacle of foraminate material open at its upper end, a carrier pivotally connected with the rear wall of the receptacle for swinging movement from a position extending above the receptacle to a position in front of the receptacle, a cover carried by the carrier for closing the upper portion of the receptacle when the carrier is in a raised position, and a handle connected with the receptacle.

1,351,274. CURTAIN-STRETCHER. LOUIS E. WOOD, Farrell, Pa. Filed May 24, 1920. Serial No. 383,840. 9 Claims. (Cl. 45—24.)

1. A curtain stretcher comprising a rotatably mounted standard, a drum having an upper curtain engaging head

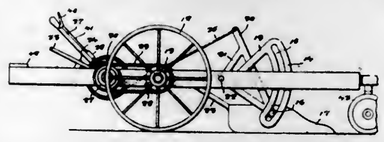
fitting upon the standard and a lower curtain engaging head slidably fitting upon the standard, vertical bars loosely connected with the upper head and slidably engaging the lower head, one bar being provided with curtain engaging means, a vertically extending curtain engaging bar releasably and slidably connected with the heads, and means for drawing the lower head downwardly to stretch a curtain connected with the heads and bars.

9. The structure of claim 3 having each drum head provided with a hub, spokes extending from the hub and having seats cut in their outer ends to receive vertical bars, and side bars connected with the spokes upon opposite sides of the seats and provided with curtain engaging elements.



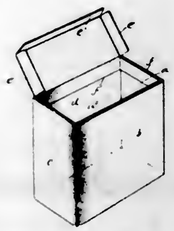
1,351,275. SCREEN. WILLIAM WOROPEL, Lansing, Mich. Filed Dec. 29, 1919. Serial No. 348,153. 1 Claim. (Cl. 156—39.)

A roll screen comprising in combination a shaft supported on a window frame, a drum rotatable about said shaft, a coiled spring having one end attached to said drum and the other to said shaft, a screen adapted to be rolled upon said drum, a hood for said drum and the screen thereon, hingedly mounted upon said frame, vertical runners in the sides of said frames having serrated interior surfaces, said runners adapted to guide said screen in its vertical movement, and releasable means for retaining said screen in any desired position in said frame comprising horizontal tubular members at the bottom of said screen, the inner ends of said members having enlarged chambers, rods passing through said tubes and adjacent chambers, the outer ends thereof adapted to engage said serrated surfaces, a stop on each of said rods within said chambers and coiled springs about said rods within said chambers, a bell crank having one of said rods attached thereto, a link having the other of said rods attached thereto, said link being also attached to said bell crank, and a handle on the latter for actuating said rods.



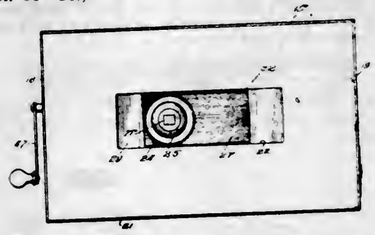
1,351,276. WRENCH. ALBERT H. BENWELL, St. Louis, Mo. Filed Mar. 1, 1920. Serial No. 362,445. 2 Claims. (Class 81—109.)

2. A wrench comprising a slotted head provided with a pin across the slot, and having a handle and a jaw curved laterally with regard to said head and serrated on both sides, and an auxiliary jaw and shank curved laterally with regard to each other and provided with notches on said shank adapted to engage selectively with said pin,—said shank being insertible into the slotted head from either side and the auxiliary jaw being thereby generally parallel to the main jaw for gripping plate or small pipe, or curved opposite to the same when reversed



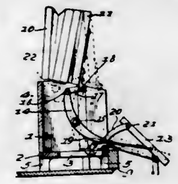
for gripping relatively larger pipe, and variably adjustable in both positions substantially as described.

1,351,277. ROAD-SCRAPER AND LAND-LEVELER. ALEX PETER KARL BERG, Turlock, Calif. Filed Nov. 28, 1919. Serial No. 341,205. 4 Claims. (Cl. 37—33.)



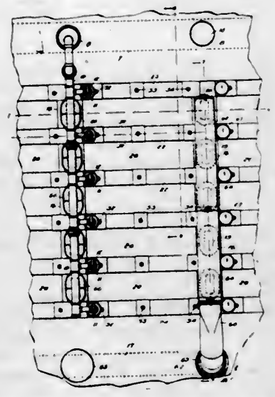
1. A machine of the class described comprising a wheeled frame, spaced guides carried by the sides of the frame, levers pivoted between their ends on the sides of the frame, a shovel or scraper pivoted between the lower end of said levers, the pivots projecting beyond the levers, and movable within said guides, means actuated from the tractor wheel of the frame for operating said levers to move said shovels toward and away from the ground, and means for holding the shovel elevated.

1,351,278. BOX. AARON M. BILSTEIN, Riderwood, Md. Filed July 27, 1917. Serial No. 188,183. 6 Claims. (Cl. 229—38.)



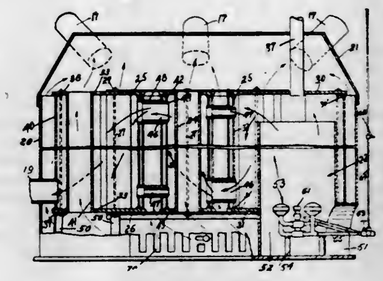
1. The herein described box comprising a body closed at the bottom and provided at its top with a plurality of interior pockets open only at the top formed of thin material folded on itself and one of the folded leaves or sections connected at its edge to the body of the box at the top, and a cover having a plurality of marginal flaps corresponding to and adapted to be received in said pockets when the box is closed, whereby a complete closure is provided and the escape of powder-like contents of the box prevented.

1,351,279. CAMERA. BRUCE BORLAND, Chicago, Ill. Filed Mar. 6, 1918. Serial No. 220,706. 10 Claims. (Cl. 88—16.)



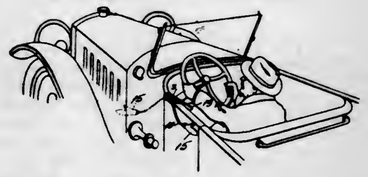
1. The combination with a camera of the type in which the objective is moved relatively to the film, and having driving mechanism for actuating the objective, of means separate from the driving mechanism for positively locking the objective during the periods of exposure whereby the objective is held rigidly in proper position.

1,351,280. DETACHABLE BOTTOM-ACTION UNIT FOR AUTOMATIC MUSICAL INSTRUMENTS. GEORGE P. BRAND, New York, N. Y. Filed Oct. 29, 1917. Serial No. 199,139. 12 Claims. (Cl. 84—169.)



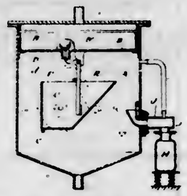
1. A removable unit adapted to be placed in a player piano, comprising a pedal receptacle, pedals adapted to be folded in the same, and exhaust mechanism supported by said receptacle and connected to said pedals, said pedals foldable in a plane below that of said exhaust mechanism and all removable as a unit from said player.

1,351,281. FURNACE CONSTRUCTION. BARTLEY E. BROADWELL, Niagara Falls, N. Y. Filed Mar. 19, 1919. Serial No. 283,470. 10 Claims. (Cl. 25—134.)



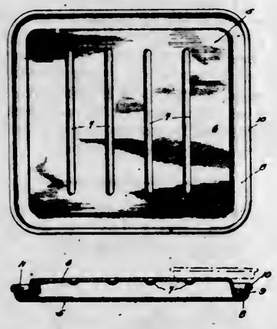
1. In a ring furnace, the combination with a plurality of interconnected gas flues arranged longitudinally of said furnace, of pits arranged parallel to said flues and in proximity thereto and having a passageway extending beneath same throughout their length and connecting with one of said flues, and a vertical baffle in one or more of the flues.

1,351,282. FURNACE. BENJAMIN F. CALDWELL, Pomona, Calif. Filed Apr. 21, 1919. Serial No. 291,746. 1 Claim. (Cl. 126—116.)



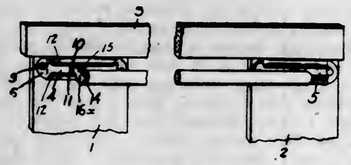
A heating furnace comprising an outer casing, a series of heating chambers mounted in bodily spaced relation to each other and to and within the said casing, each of the sections provided with respective top and bottom forming plates and walls arranged on the respective top and bottom plates to form a unitary section, telescopic flues between the adjacent heating sections at the opposite ends thereof, said flues at the opposite ends of the heating sections being a large and a small flue, respectively, with one pair of flues between the adjacent sections reversely arranged relative to the pairs of large and small flues between the next adjacent sections.

1,351,283. AUTOMOBILE-SIGNAL. SAM D. CARNES, Fort Worth, Tex. Filed Aug. 22, 1919. Serial No. 319,100. 3 Claims. (Cl. 116—52.)



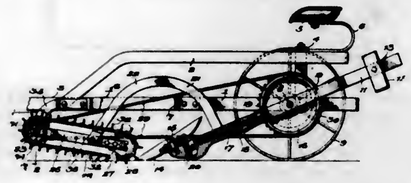
1. In an automobile direction signal, a plate to be fastened to the inner side of the door of an automobile or the like, and carrying an upper horizontal portion, a second plate arranged upon the upper horizontal portion and provided with elongated slots extending transversely of the second palte, clamping elements carried by the upper horizontal portion and operating within the elongated slots, a housing secured upon the second plate and extending transversely thereof, a plunger slidable within the housing and provided at its outer end with a gear rack, a signal arm pivotally connected with the second plate and provided near its pivot with a gear engaging the gear rack, a pedal arranged near and inwardly of the first named plate, means pivotally connecting the pedal and first named plate and spaced from the forward end of the pedal, means connecting the forward end of the pedal and the inner end of the plunger, and a spring to swing the rear end of the pedal outwardly.

1,351,284. AUTOMATIC MILK-MEASURING APPLIANCE. JOHN CROCKER CAWSEY, Hawera, New Zealand. Filed June 1, 1920. Serial No. 385,735. 2 Claims. (Cl. 249—35.)



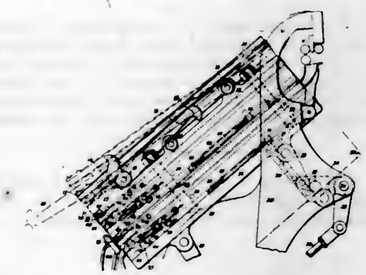
1. In combination with an automatic milk measuring apparatus including a chamber and a measuring tipping vessel therein, means for separating a small proportion of the milk from the main quantity and separately delivering it consisting in a cup arranged to catch a quantity of milk as the measuring vessel tips to discharge its contents, a discharge leading from such cup, a receiving flask into which such discharge leads and a pipe connection between the said flask and the chamber, substantially as specified.

1,351,285. FOOD-TRAY. MATTIE G. CHESS, Oakland, Calif. Filed Sept. 19, 1919. Serial No. 324,858. 1 Claim. (Cl. 65—53.)



A pressed metal article of manufacture comprising a sheet metal blank formed into a tray having a raised food platform provided with depressed reinforcing corrugations constituting essence receiving means, the edges of the blank being turned upwardly to provide an insecticide trough below the level of the food platform whereby insects are prevented from crawling from the outer side of the trough to dishes mounted upon the platform and projecting beyond the same.

1,351,286. BRACKET-SUPPORT FOR ROLLER-BLINDS. WILLIAM CLAYTON, Toronto, Ontario, Canada. Filed Apr. 2, 1920. Serial No. 370,800. 1 Claim. (Cl. 156—24.)

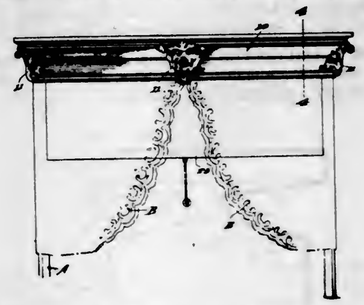


A bracket support for roller blinds comprising a plate member adapted to be permanently secured in position, and provided with parallel guides, and an inverted V-shaped spring bracket, the arms of the V being provided with right-angular outward extensions adapted to bear at one end against the base of the bracket and at the opposite end against the opposing portions of each guide when the V-shaped spring bracket is expanded.

1,351,287. BEET-TOPPING MACHINE. JOHN DEVEY, Lehi, Utah. Filed Dec. 18, 1918. Serial No. 267,312. 5 Claims. (Cl. 55—107.)

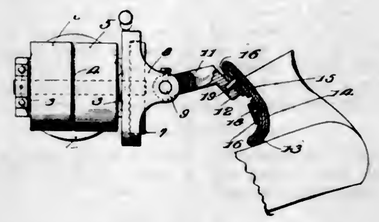
1. In a beet topping machine, the combination with the main frame, of a vertically movable cutting disk, an elongated belt frame pivotally mounted adjacent one of its ends on the main frame with its opposite end in proximity to the surface of the ground, a traveling belt carried by the belt frame, and connections between the cutting disk and belt frame, whereby vertical movement of the belt frame will impart a vertical movement to the cutting disk.

1,351,288. TYPOGRAPHICAL COMPOSING-MACHINE. CLARENCE LEON GEORGE and HENRY HART, London, England, assignors to Linotype and Machinery Limited, London, England, a Limited Liability Company of Great Britain. Filed Apr. 30, 1919. Serial No. 293,818. 47 Claims. (Cl. 199—46.)



47. In a typographical composing machine, the combination of a plurality of superposed magazines, a shift frame therefor movable to bring any selected magazine into operative position, and a sliding frame carrying one of the magazines and arranged to be slid forwardly and backwardly out of and into the shift frame to facilitate the removal and replacement of the magazine thereon.

1,351,289. CURTAIN AND SHADE SUPPORT. IVAN GOSAR, Bethlehem, Pa. Filed Aug. 28, 1919. Serial No. 320,428. 6 Claims. (Cl. 156—13.)

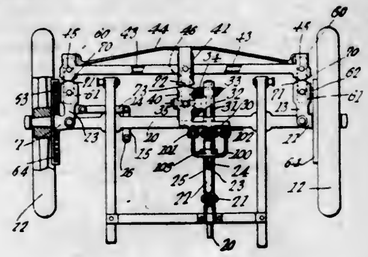


6. In a combined curtain and shade support, the combination of an ornamental frame including a face portion and end portions, said ornamental frame adapted to be mounted about a window casing, attaching brackets carried by the ornamental frame, a pair of substantially L-shaped rods pivotally connected to the ends of the ornamental frame, said ornamental frame provided with recesses in its inner surface adapted to receive portions of said rod therein for clamping curtains in the recesses and

connecting them to the ornamental frame at the inner surfaces thereof, the meeting ends of said L-shaped rods being outturned and concavely curved to provide a hook for receiving the ball of an operator's fingers to permit

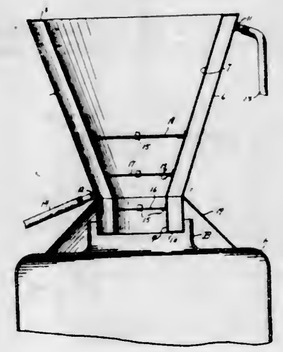
the swinging the rods outwardly to disconnect a curtain from the ornamental frame, and buttons carried by the inner surface of the ornamental frame for engagement with said rods to hold them against accidental pivotal movement.

1,351,290. HEEL-SCOURING MACHINE. RUPERT L. GREENLEAF, Cambridge, Mass. Filed June 17, 1918. Serial No. 240,405. 2 Claims. (Cl. 51—17.)



1. Means for securing the breasts of shoe heels comprising supporting arms carrying a form plate of curved cross section and of approximately uniform thickness throughout its extent, a yieldable cover over the front face of the form plate, an abrading strip fitting over the cover with its longitudinal edges against the back of the form plate, clamping plates fitted against the abrading strip at the back of the form plate and extending longitudinally of the form plate, means for securing one clamping plate and the adjacent side edges of the cover and of the abrading strip to the form plate, and means for securing the other clamping plate and the adjacent side edge of the cover and of the abrading strip to the form plate and to the ends of the supportihg arms, the first-mentioned clamping plate and the parts held thereby being entirely free of the supporting arms.

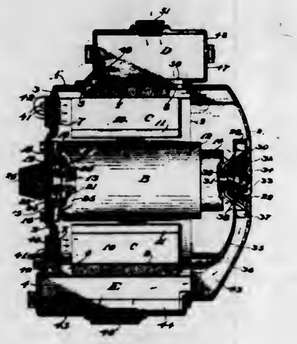
1,351,291. RUBBER SOLE. FRANK HORNQUIST, Mount Jewett, Pa. Filed Feb. 14, 1920. Serial No. 358,741. 3 Claims. (Cl. 36—32.)



1. A rubber shoe sole having a central longitudinal ridge on its upper side terminating a short distance in rear of its front end, said upper side being concave from said ridge to the side edges of the sole and also from the front end of the ridge to the front end of the sole; the lower side of said sole having a central longitudinal channel terminating a short distance from its front end, said lower side being convex from said channel to the side edges of the sole and between the front end of the sole and the corresponding end of the channel; said sole having nail guides at substantially the crest of its convex portion, whereby the attaching nails will flatten the sole and retain its center and edges in tight contact with the shoe to which it is attached.

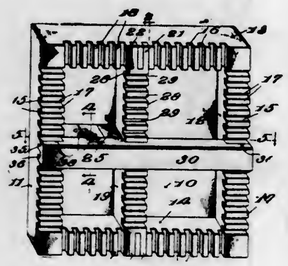
1,351,292. VEHICLE-DRIVE. MARTIN KIMBLE, Highland Park, Ill. Filed Mar. 8, 1920. Serial No. 364,165. 3 Claims. (Cl. 74—103.)

1. In a vehicle of the class described, a front axle; stub axles pivoted thereto; ground wheels journaled on the stub axles; a yoke; a bracket; links connecting the yoke with the stub axles and with the bracket; means for moving one stub axle to effect a steering of the vehicle; interengaging elements on the yoke and on the stub axles for imparting swinging movement from said stub axle to the other stub axle; interengaging eleinents on the yoke and on the bracket for imparting swinging movement to the bracket; a drive shaft; a second shaft journaled in the bracket; an operative connection between the second shaft and the ground wheels; a telescopic shaft; a first universal joint connecting the telescopic shaft with the drive shaft; a second universal joint connecting the telescopic shaft with the second shaft; and means coöperating with the telescopic shaft and with the bracket for preventing lateral movement at the second universal joint.



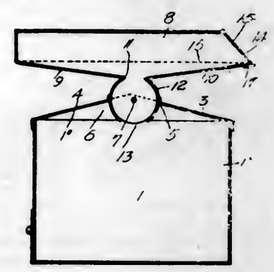
1,351,293. STRAINER. HENRY EARNEST LEECH, Live Oak, Fla. Filed Nov. 19, 1919. Serial No. 339,007. 1 Claim. (Cl. 210—155.)

The combination with a kettle having an enlarged neck, of a strainer comprising a single length of material



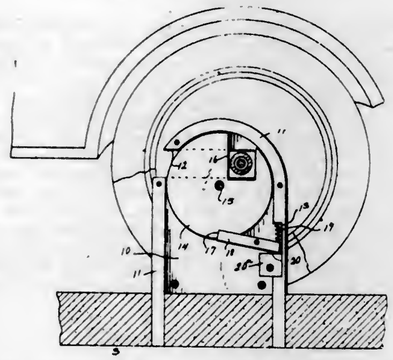
tapered from the intermediate portion to its ends, one end portion of said length being extended back upon said length in spaced parallel relation to the other end portion to provide a heat chamber, said length being formed into a frustum-conical casing, the ends of said length being connected to each other, heat inlet and outlet ports for said chamber, strainers disposed within the inner casing, an inverted frustum-conical stand connected to the outer surface of the heating chamber adjacent the lower end of the strainer, said stand holding the lower end of the strainer within the neck of the kettle in annular spaced relation thereto and coöperating with the kettle to prevent the escape of heat.

1,351,294. ELECTRIC MOTOR. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 7, 1916. Serial No. 89,650. 8 Claims. (Cl. 172—36.)



6. In an electric motor having a coil supporting and armature inclosing field frame, an armature therein mounted upon an armature shaft supported by flame proof bearings, a flame tight starting and controlling box and a flame tight resistance box secured by gas tight joints to the side walls of the motor casing, passages formed in the walls of the casing connecting the starting and controlling box and the resistance box with the interior of the motor casing, flame proof ventilators in the walls of the starting and controlling box and of the resistance box, and means actuated by the rotation of the armature to cause a positive flow of air through the ventilators and passages of the casing as and for the purpose set forth.

1,351,295. GALLEY. ALFRED J. LORIOT, Newark, N. J. Filed Jan. 2, 1919. Serial No. 269,253. 5 Claims. (Cl. 22—136.)

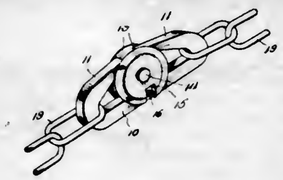


1. A frame whose sides and ends have transverse channels, a bar therein parallel with the sides and having longitudinal fingers adjustably engaging the channels in the ends, this bar also having transverse channels, and a second bar extending across the frame and the first bar and having longitudinal ribs adjustably engaging their channels.

1,351,296. ASH-SIFTER. ISIDOR LUNENFELD, Brantford, Ontario, Canada. Filed Mar. 20, 1920. Serial No. 367,437. 1 Claim. (Cl. 83—60.)

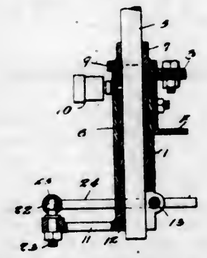
A container having a convex top portion provided at the apex with a slot, the side walls of said slot being formed to project above the top and to present opposed concave bearing surfaces, a sifter having the body portion thereof formed to present a slotted horizontally disposed tubular extension, said extension being disposed for oscillating movement in said slot with the outer surface thereof in sliding contact with the opposed bearing surfaces at either side of the slot, an pivots supporting the ends of said extension in said slot, said pivots being positioned midway between the sides of the slot and in a plane with the opposed concaved bearing surfaces.

1,351,297. AUTOMOBILE-LOCK. EDGAR MCCRACKEN, Albia, Iowa. Filed Aug. 9, 1919. Serial No. 316,362. 4 Claims. (Cl. 70—90.)



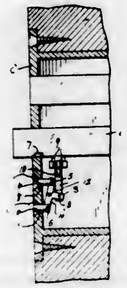
1. An automobile lock comprising a vertical casing having a horizontally extending slot, a rotatable disk disposed within the casing and having a straight tangential slot adapted in one position of the disk to register with the slot in the casing and in the other position to extend transversely to the casing slot, and means within the casing for locking the disk in the last named position.

1,351,298. COUPLING-LINK. DAVID MADILL, Salt Lake City, Utah. Filed Apr. 22, 1919. Serial No. 291,833. 1 Claim. (Cl. 24—232.)



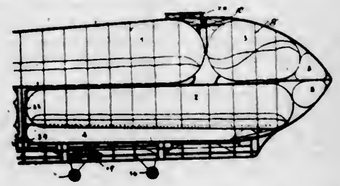
A coupling link for tire chains including a body provided with bills having their ends arranged in opposed

spaced relation thereby forming a gap, said body being provided intermediate its ends with an upstanding lug terminating below said gap, a pivot pin extending through said lug, disks rotatably carried by said pivot pin on opposite sides of said body and having link receiving notches adapted for registration with said gap, the peripheral edges



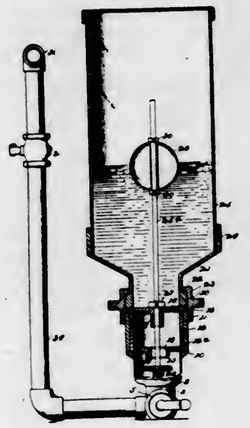
of said disks being beveled, said body being provided immediately below said lug with a transverse opening, and a detachable pin slidably extending through said opening and having its end portions arranged within said link receiving notches for securing the disks against rotation, the ends of said pin terminating inwardly of the outer sides of said disks whereby the same are spaced from the adjacent tire.

1,351,299. DIRIGIBLE HEADLIGHT MECHANISM. MACK O. MEEKS, Wildorado, Tex. Filed Oct. 19, 1917. Serial No. 197,465. 1 Claim. (Cl. 240—62.)



The combination with the frame, of a fixed sleeve, an elongated bushing in the sleeve extending its full length and having its ends flush with the ends of the sleeve, a lamp-bracket-stem oscillatable in the bushing, a cap fixed on the stem and supported on the upper ends of the sleeve and bushing, an actuating arm having a split hub on the lower end of the stem engaging the lower ends of the sleeve and bushing, and a clamp bolt in the free sides of the hub for rigidly securing the arm to said stem.

1,351,300. LATCH. SAMUEL H. MILLER, La Junta, Colo. Filed Dec. 13, 1919. Serial No. 344,578. 1 Claim. (Cl. 292—150.)



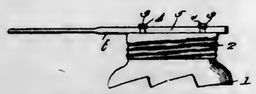
In combination with a lock mechanism including a casing and a latch bolt, a pair of spaced studs having sliding movement through a wall of a casing, a member pivotally engaged with and connecting the inserted end portions of the studs, and provided with an outstanding arm, a vertically disposed member pivotally engaged at one end portion with the opposite end portion of said arm, said last-named member coacting with the bolt when retracted and upon inward movement of one of the studs for holding the bolt against outward movement, a pair of spaced lugs carried by the casing adjacent the latch and between which the free end portion of the last named member is freely disposed, and a spring leaf secured substantially midway its length to the second member, the extremities of said spring leaf coacting with the face of the casing for holding said second member against movement away from the bolt when in working engagement therewith.

1,351,301. AIRSHIP. VINCENZO PRITELLI, Rome, Italy. Filed July 23, 1918. Serial No. 246,394. 1 Claim. (Cl. 244—6.)

An airship including a series of spaced ballonnets, diaphragms dividing the ballonnets into hydrogen and air chambers, the hydrogen chambers of the respective ballonnets being in open communication, and means for delivering air under pressure to the air chamber of any or all of the ballonnets to force the gas therefrom, a platform supported by the ballonnets, propellers arranged on the line of maximum length transverse the longitudinal dimension of the air ship, a vertical wing mounted above the ballonnets, a plurality of vertical wings arranged below the ballonnets, and a plurality of rudders.

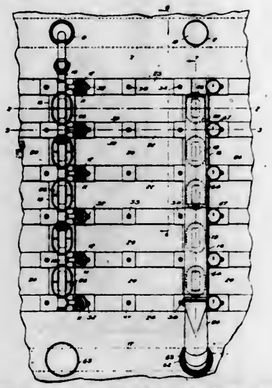
1,351,302. ICE-CREAM MACHINERY. ANTHONY R. SANNA, Washington, D. C., assignor to George P. Sacks, Bethesda, Md. Filed Oct. 3, 1919. Serial No. 328,285. 5 Claims. (Cl. 221—100.)

1. In combination, an ice cream freezer, a mixture supply pipe located to supply "mix" to the freezer by gravity, a regulator between the mixture supply pipe and the ice



cream freezer including means for automatically receiving a predetermined charge of "mix" from the mixture supply pipe, and manual means for simultaneously cutting off the supply of mix in the mixture pipe and discharging the predetermined charge of "mix" in the regulator to the freezer.

1,351,303. AUTOMOBILE-MUFF. CHARLES R. SCOTT, Wyandotte, Okla. Filed Apr. 15, 1920. Serial No. 374,153. 5 Claims. (Cl. 2—104.)

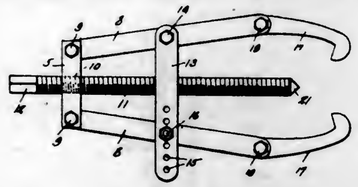


1. In a device of the character described, a substantially arcuate frame embodying upper and lower inwardly diverging sections, means to secure the frame to the steering post of an automobile, and a cover secured to said frame.

1,351,304. CLOSURE-RELEASING MEANS FOR JARS. WALTER M. SHELTON, South Richmond, Va. Filed Feb. 13, 1920. Serial No. 358,353. 2 Claims. (Cl. 215—84.)

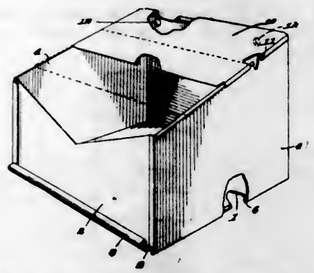
1. As an article of manufacture, a jar closure having located upon its upper face at diametrically opposite points tool engaging lugs, certain opposite faces of said lugs being upwardly converged to cause an upward movement of a closure removing tool for engagement in front of one of the lugs and to the rear of the other lug, whereby upon applying pressure on the tool in one direction, the closure may be rotated, the upper ends of said lugs having heads provided with laterally extending parts curved toward the closure and adapted to overlie and bite upon the tool to limit the tool in its upward movement and retain the tool in a firm engagement with the lugs.

1,351,305. FURNACE CONSTRUCTION. ALBERT G. SMITH and BARTLEY E. BROADWELL, Niagara Falls, N. Y. Filed Mar. 19, 1919. Serial No. 283,469. 7 Claims. (Cl. 25—134.)



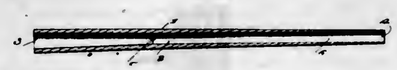
1. In a ring furnace, a gas flue, a hollow head wall at either end thereof, and having an orifice at its upper end discharging into the flue, a fuel gas inlet in the upper wall of the flue in proximity to said orifice, means for closing said orifice, and an observation hole in said flue adjacent to said inlet.

1,351,306. VEHICLE-SPRING. PERCY SMITH, Highland Park, Mich. Filed Sept. 19, 1919. Serial No. 324,816. 10 Claims. (Cl. 267—19.)



1. A device of the character described including pivotally connected arms, springs fixed thereto, and a connection between said springs coupling corresponding end portions of the arms and so arranged that when one of the arms is rocked with respect to the other said springs will be flexed.

1,351,307. GEAR-PULLER FOR AUTOMOBILES AND ALL OTHER KINDS OF MACHINERY. CARL W. STELTING, Medford, Okla., assignor of one-half to Clarence R. Nelson, Medford, Okla. Filed Jan. 26, 1920. Serial No. 354,030. 1 Claim. (Cl. 29—85.)



A gear puller comprising a head having a threaded aperture, a screw threaded therein, arms, means for pivotally connecting the arms to the head, jaws, means for pivotally connecting the jaws to the arms, links pivotally connected to one of the arms, said links having coinciding apertures and a fastener in the other arm extending through an aperture in each link for adjustably connecting the links to the said arms.

1,351,308. KNOCKDOWN HEN'S NEST. EDWARD SWANSON, Sheffield, Ill. Filed July 31, 1919. Serial No. 314,460. 3 Claims. (Cl. 119—45.)

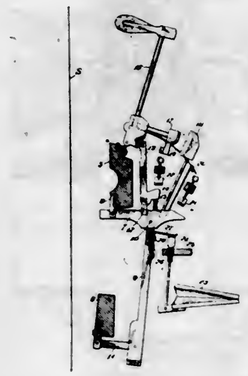
1. A hen's nest comprising a rectangular receptacle having a cover element adapted to partially cover the same, and a slidable connection between said cover and the side walls of the receptacle for permitting said cover to be moved to position to provide two openings in the top of the receptacle of smaller than sufficient dimensions to permit entrance or exit of a hen.

1,351,309. GUN-BARREL. ARTHUR W. THISTLETHWAITE, Atchison, Kans. Filed June 4, 1918. Serial No. 238,160. 2 Claims. (Cl. 42—70.)

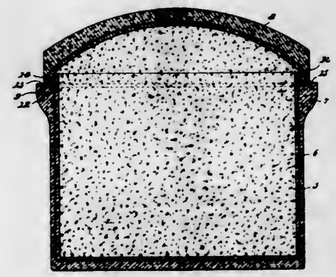
1. A smooth bore gun barrel of greater cross sectional diameter at its breech end than at its discharge end and having its bore gradually tapered from the extreme rear end of its breech in the direction of its discharge end for a distance not less than one-third nor more than two-thirds its length, the walls of the bore being of greater thickness at the breech end of the barrel than at the discharge end thereof.

1,351,310. SILO-HOOP. JOHN J. VERHAGEN, Cobleskill, N. Y. Filed June 5, 1919. Serial No. 301,984. 1 Claim. (Cl. 217—95.)

A turnbuckle for cable hoops comprising two substantially flat, truly rectangular blocks of identical size and shape and unobstructed on all sides and edges, each block having one edge for contact with a cable-encircled object and having a pair of cable receiving openings adjacent said edge, each block having near its opposite edge a single central opening, all of said openings leading from one flat side of the block to the other flat side thereof, and a screw passing through said central opening of each block.



1,351,311. COMBINATION WASHRAG AND SOAP-CONTAINER. GEORGE VIENEBURG, New York, N. Y. Filed Sept. 3, 1919. Serial No. 321,315. 2 Claims. (Cl. 15—26.)

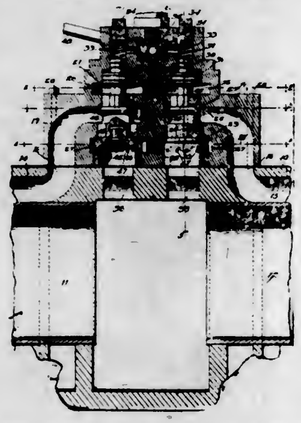


1. A wash rag composed of two pieces of flexible and porous material stitched together to form a pocket for soap or the like, the top or inner piece having a transversal incision to form a mouth for said pocket and a longitudinal extension at each end adapted to be folded around the hand of the user and to overlap one another, and fastening means on said extensions, said mouth being located near one end of said pocket to lie below the respective marginal, fleshy part of the user's palm so that it will be closed when said extensions are folded around the hand.

1,351,312. PLAYER-PIANO. FRANK J. W. WEISER, Elmhurst, Ill. Filed July 10, 1919. Serial No. 309,827. 2 Claims. (Cl. 84—68.)

1. In a player piano, a piano action including a hammer and its operating sticker, a player pneumatic having an adjustable cap located in front of the sticker and above the pneumatic, and a contact consisting of a flange attached to the front side of the sticker and a flexible spring arranged above the pneumatic and in the path of the cap.

1,351,313. BURIAL-VAULT. HARRY M. WELLS, Omaha, Nebr. Filed June 10, 1919. Serial No. 303,088. 2 Claims. (Cl. 72—7.)



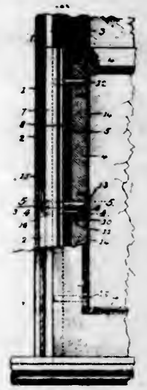
2. A burial vault comprising a body portion, a shoulder formed upon the upper edge thereof, the upper face of the shoulder being cut away to form a channel seat, a cover having a depending flange flatly resting on the bottom wall of the channel seat, and a plastic filling for sealing the cover on the shoulder positioned on the seat outwardly of the cover flange.

1,351,314. STEAM-CIRCULATING BY-PASS AND RELIEF VALVE. EUGENE B. WHELAN, Omaha, Nebr. Filed Feb. 1, 1919. Serial No. 274,521. 5 Claims. (Cl. 121—133.)

4. In a locomotive drifting device, a by-pass and relief valve having by-pass channels and a steam chamber, double seating valves controlling communication between said channels and between the channels and said

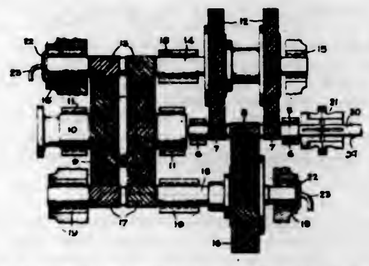
steam chamber, and having axial openings, pilot valves controlling the axial openings of the main valve, said

openings of the valve being in communication with the said steam chamber, and means for supplying low pressure steam to the said chamber.



1,351,315. SLIDING WINDOW AND ITS FRAME. WILLIAM ADOLPHUS WILSON, Birmingham, England. Filed June 9, 1920. Serial No. 387,713. 1 Claim. (Cl. 20—49.)

The combination with a window frame, of an upper and lower sash mounted for sliding movement in said frame, a pair of independently revoluble pulleys mounted at the side of the frame intermediate its ends, a flexible strand led under one of the pulleys and having its ends connected to the upper parts of the sashes and a second flexible strand led over the other pulley and having its ends connected to the lower parts of the sashes whereby a movement of either sash compels movement of the other sash.



1,351,316. REVERSIBLE WINDOW. DAVID YADGIR, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,128. 14 Claims. (Cl. 20—45.)

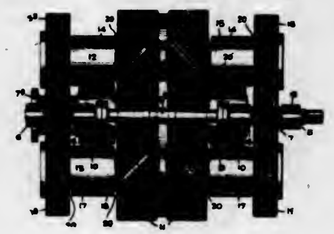
1. In a reversible window, the combination of a window frame provided with a vertical guide groove, a window sash formed with an open recess along an end of a vertical rail of the sash, a guide rail movable in said recess and adapted to engage in the guide groove of the window frame, a horizontal guide stem carried by the sash and having guiding engagement with said guide rail, said guide stem extending through the guide rail and into the guide groove of the window frame to constitute a pivot for the sash, a base plate carrying said stem and adapted

for attachment to an outer face of the sash rail, a removable bearing strip adapted for engagement with said stem, and means for imparting sliding movement to said guide rail.

1,351,317. GEARING. KARL ALQUIST, Schenectady, N. Y. Filed Nov. 20, 1917. Serial No. 203,064. 15 Claims. (Cl. 74—7.)

2. In a gearing, the combination of a high speed shaft having two helical pinion members thereon, one of which has right-hand teeth and the other left-hand teeth, a low speed gear wheel, a set of intermediate gear wheels which transmits load between one of said pinion members only and the low speed gear wheel, and a second set of intermediate gear wheels which transmits load between the other pinion member only and the low speed gear wheel, the gear wheels which engage the pinion members being located on opposite sides of the high speed shaft.

6. In a gearing, the combination of a high speed shaft having two gearing members thereon, one of which has right-hand helical teeth and the other left-hand helical teeth, a low speed gear wheel having double helical teeth thereon, and two sets of intermediate gear wheels which transmit the load from said gearing members to said low speed gear wheel, each of said intermediate sets comprising a low speed pinion having double helical teeth which mesh with the low speed gear wheel and a high speed gear wheel having single helical teeth, one of said high speed gear wheels meshing with one of said gearing members on one side of the high speed shaft and the other meshing with the other of said gearing members on the opposite side of the high speed shaft, and means for balancing the axial thrust of said intermediate sets of gear wheels.



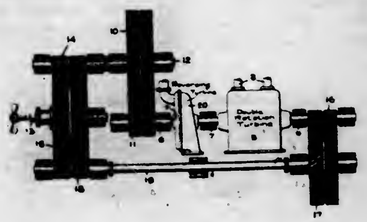
7. In a gearing, the combination of a high speed shaft having two helical pinions thereon, one of which has

right-hand teeth and the other left-hand teeth, a low speed gear wheel, a set of intermediate gear wheels which transmits load between one of said pinions and the low speed gear wheel, and a second set of intermediate gear wheels which transmits load between the other pinion and the low speed gear wheel, the gear wheels which engage the pinions being located on opposite sides of the high speed shaft, and means whereby the gear wheels of one of said intermediate sets may be adjusted angularly relatively to each other.

11. In a gearing, the combination of a high speed shaft, two pinion members thereon, one of which has right hand helical teeth and the other left hand helical teeth, one of said pinion members being formed in two parts which are located on opposite sides of the other, a low speed gear wheel, and two sets of intermediate gear wheels which transmit power between said pinion members and the low speed gear wheel, each of said sets comprising a gear wheel which engages one of said pinion members and a pinion engaging the low speed gear wheel.

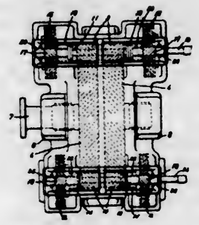
12. In a gearing, the combination of a high speed shaft having two pinion members thereon, a low speed gear wheel, a set of intermediate gear wheels which transmits load between one only of said pinion members and said low speed gear wheel, and a second set of intermediate gear wheels which transmits load between the other only of said pinion members and said low speed gear wheel.

1,351,318. GEARING. KARL ALQUIST, Schenectady, N. Y. Filed Jan. 9, 1918. Serial No. 210,955. 16 Claims. (Cl. 74—7.)



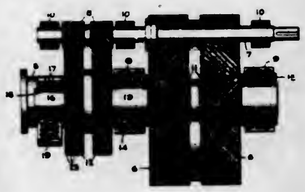
1. In a gearing, the combination of a high speed pinion comprising two parts, a low speed gear wheel, gearing means through which power is transmitted between said pinion parts and the low speed gear wheel, and means connecting said pinion parts together so arranged that such parts can adjust themselves relatively to each other by moving sidewise out of axial alinement.

11. In a gearing, the combination of a low speed gear wheel, two low speed pinions meshing therewith, shafts for said pinions having overhung ends, high speed gear wheels mounted on the overhung ends of said shafts, and a shaft carrying pinion members which mesh with said high speed gear wheels, said pinion members being balanced between said gear wheels and having right and left-hand helical teeth respectively.



1,351,319. GEARING FOR DOUBLE-ROTATION TURBINES. KARL ALQUIST, Schenectady, N. Y. Filed Jan. 16, 1918. Serial No. 212,028. 1 Claim. (Cl. 74—7.)

In combination, a turbine having two rotors which revolve in opposite directions, shafts for said rotors, a driven shaft, gearing through which said driven shaft is driven by both rotors, the gearing for one rotor shaft comprising a gear wheel and a pinion meshing directly therewith, and the gearing for the other rotor shaft comprising a pinion, a gear wheel, and two intermediate gear wheels through which power is transmitted in parallel

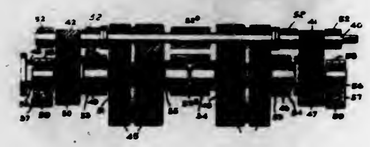


from the pinion to said gear wheel, and a reversing turbine associated with one of the rotor shafts.

1,351,320. GEARING. KARL ALQUIST, Schenectady, N.Y. Filed June 22, 1918. Serial No. 241,345. 11 Claims. (Cl. 74—7.)

1. In combination, a gear casing having bearings in its walls, shafts mounted in said bearings, gear wheels carried by said shafts, supporting means for said casing located under the bearings of one of said shafts, and supporting means for said casing located between the bearings of another of said shafts.

1,351,321. GEARING. KARL ALQUIST, Schenectady, N. Y. Filed June 22, 1918. Serial No. 241,346. 8 Claims. (Cl. 74—7.)

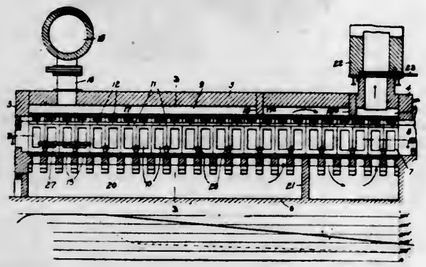


8. The combination with a high speed pinion, a low speed gear wheel, and intermediate gearing for transmitting power from one to the other including an intermediate shaft and overhung gearing means thereon, of yielding means supporting the weight of said overhung gearing means.

1,351,322. GEARING. KARL ALQUIST, Schenectady, N. Y. Filed June 22, 1918. Serial No. 241,347. 27 Claims. (Cl. 74—7.)

1. In a gearing, the combination of a high speed shaft, right hand and left hand helical pinion members thereon, a low speed shaft, a plurality of intermediate speed shafts through which power is transmitted between the high speed shaft and the low speed shaft, and a helical gear

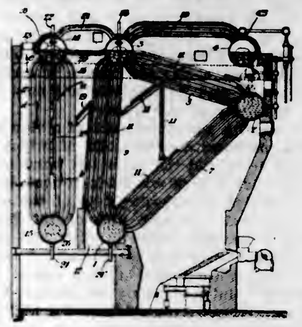
wheel having single helical teeth on each intermediate speed shaft which meshes with only one of said pinion members, whereby one intermediate speed shaft transmits power from only one of said pinion members and the other intermediate speed shaft transmits power from only the other of said pinion members.



19. In a gearing, the combination of a high speed shaft, a pair of pinion members mounted thereon, one of which has right hand helical teeth and the other left hand helical teeth, a low speed shaft, a pair of gear wheel members thereon, an intermediate speed shaft associated with each pinion member, gear wheels on each such intermediate speed shaft for transmitting power from a pinion member to a low speed gear wheel member, said low speed gear wheel members and the gear wheels meshing therewith having right hand and left hand helical teeth thereon which are unequal as to width so as to balance the axial thrust on said intermediate shafts.

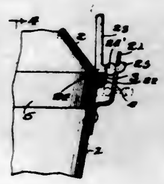
20. In a gearing, right hand and left hand helical pinion members, means connecting them which permits said members to adjust themselves relatively to each other, a low speed shaft, a plurality of intermediate speed shafts through which power is transmitted between said pinion members and the low speed shaft, and a single helical gear wheel on each intermediate speed shaft which meshes with one of said pinion members.

23. In a gearing, right hand and left hand helical pinion members, means connecting said members whereby they can adjust themselves relatively to each other, a low speed shaft, two gear wheel members thereon each having double helical teeth, an intermediate speed shaft associated with each pinion member, and helical gear wheel means on each intermediate speed shaft for transmitting power between such pinion member and a gear wheel member.



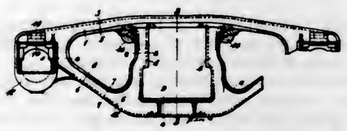
26. In a gearing, the combination of a high speed shaft, a plurality of pinion members thereon, a low speed shaft, a plurality of intermediate speed shafts, and gear wheel means on each intermediate speed shaft which transmits power from one only of said pinion members to said low speed shaft.

1,351,323. ANNEALING-FURNACE OR LEER. WALTER O. AMSLER, Edgewood, Pa. Filed Nov. 29, 1918. Serial No. 264,491. 11 Claims. (Cl. 49—46.)



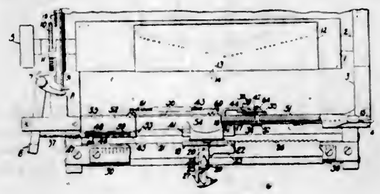
6. In an annealing furnace or leer, a muffle having its sides and arch formed of tiles disposed therein, said muffle having its side walls formed of a series of side wall tiles proper and a series of independent skew tiles, the arch of the muffle being supported by the skew tiles.

1,351,324. STEAM-BOILER. JOHN P. BADENHAUSEN, Philadelphia, Pa. Filed May 19, 1917. Serial No. 169,609. 7 Claims. (Cl. 122—444.)



1. In a steam generating system comprising a boiler, a feed-water preheater comprising the combination of a water drum, a steam-and-water drum located above said water drum, tubes connecting said drums and baffling located among said tubes and extending vertically downwardly from said steam-and-water drum to a short distance from said water drum whereby the hot gas is directed downwardly along one portion of said tubes and upwardly along another portion of said tubes so as to cause a continuous circulation of the water in said preheater successively through said tube portions and said drums.

1,351,325. CONTAINER. THOMAS S. CATLIN, Indianapolis, Ind. Filed Jan. 9, 1917. Serial No. 141,372. 3 Claims. (Cl. 220—56.)



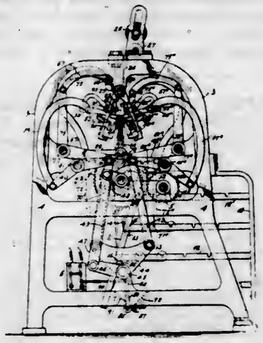
1. In a device of the class described, the combination with a container and a closure therefor, of a bail for the container, and ears on the container for supporting the bail, said bail having out-turned ends and the ears having restricted openings therein receiving the ends of the bail, each end of the bail having an enlargement adapted, when turned to a predetermined position, to pass through the opening in the adjacent ear in one direction for binding the bail against the closure to hold the latter in place and in the other direction to hold the bail out of engagement with the closure to admit opening thereof.

1,351,326. RAILWAY SIDE FRAME. CLAUS J. WERNER CLASEN, Davenport, Iowa, assignor to The Bettendorf Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Oct. 28, 1919. Serial No. 333,903. 8 Claims. (Cl. 105—205.)

1. An integral metallic side frame for car trucks, comprising column members, a top member, a lower member, and a journal box at each end of said lower member, said column, top and bottom members being all of U section, said top member extending above the tops of said journal boxes.

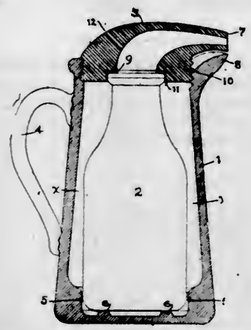
1,351,327. TYPEWRITING-MACHINE. CORNELIUS B. CORCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 15, 1919. Serial No. 271,203. 28 Claims. (Cl. 97—63.)

1. In a typewriting machine, the combination with a traveling carriage and a line-space lever therefor, of a margin-stop, and means adapted to be variably positioned by operation of the line-space lever to vary the point at which the margin-stop will be effective, independently of the travel of the carriage.



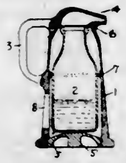
1,351,328. CAP FOR NURSING-BOTTLES AND THE LIKE. WILLIAM MORE DECKER, Buffalo, N. Y. Filed Dec. 6, 1918. Serial No. 265,659. 2 Claims. (Cl. 215—11.)

1. The combination of a nursing and sterilizing cell provided at its mouth with a projecting flange, and an elastic dome-shaped sterilizing cap arranged outside of the cell and having a beaded base-portion stretched over said cell-flange and engaging thereunder, said cap being provided in its top with a pocket for a porous plug extending into the interior of the cap, said pocket having a bottom and a normally-open gas-escape aperture which is unobstructed except by said porous plug during the sterilizing process.



1,351,329. LACE-MAKING MACHINE. PERCY GREENWOOD, New York, N. Y., assignor to August A. Follmer, New York, N. Y. Filed Jan. 8, 1917. Serial No. 141,115. 2 Claims. (Cl. 66—6.)

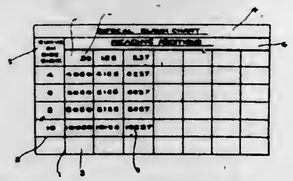
1. In a lace making machine the combination of point bars and catch bars and main operating mechanism therefor located in a lower plane than said bars, with a lace making space between it and said bars, and operating connections, at opposite ends of the machine and beyond the lace making space, extending upwardly from said operating mechanism to said bars.



2. In a lace making machine the combination of point bars and catch bars and main operating mechanism therefor located in rear of the front frame of the machine and in a lower plane than said bars, with a lace making space between said mechanism and said bars, and operating connections, at opposite ends of the machine and beyond the lace making space, extending upwardly from said operating mechanism to said bars.

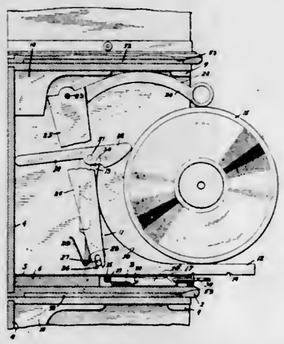
1,351,330. FLUID-CONTAINER. ARTHUR J. HERSCHMANN, New York, N. Y. Filed Apr. 24, 1920. Serial No. 376,381. 6 Claims. (Cl. 65—61.)

2. A fluid container comprising a body portion adapted to receive a milk bottle or the like and having a threaded neck through which such bottle may be inserted, such body portion having a spout and a coöperating unitary threaded cap with an opening formed within it and registering with the mouth of the bottle through which the contents of the bottle may be poured.



1,351,331. FLUID-RECEPTACLE. ARTHUR J. HERSCHMANN, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,996. 1 Claim. (Cl. 65—61.)

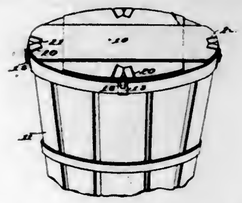
A fluid receptacle adapted to receive a readily replaceable and standard size of milk bottle, or the like, from



below, comprising an open-bottomed one-piece jug with its otherwise permanently closed upper end provided with a fluid conduit registering at its inner end with the open mouth of the bottle while its outer and smaller end serves as a nozzle for the emission of the fluid, and a removable retaining plug for the bottom of the jug.

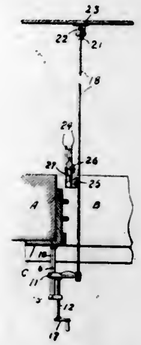
1,351,332. CHART. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 4, 1918. Serial No. 226,710. 7 Claims. (Cl. 283—1.)

1. A chart for use in the selection of bifocal lens blanks, consisting of intersecting rows and columns, designations for one of said members indicating the power of the distance portion on the bifocal face, designations for the other indicating the excess of power in the reading portion over the power in the distance face, and a key number at the intersection of the row and column built up from the designations of the row and column, said key number comprising three sections, a two unit section denoting fractional diopter portions, a one unit section denoting whole diopter variations, and additional unit columns indicating the base on which the latter parts are figured.



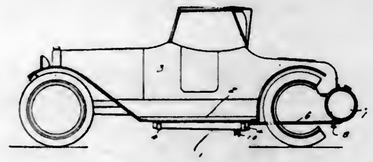
1,351,333. LOCK-CABINET FOR PHONOGRAPH-RECORDS. MILLER REESE HUTCHISON, West Orange, N. J., assignor to Miller Reese Hutchison, Inc., a Corporation of New Jersey. Filed June 3, 1919. Serial No. 301,520. 50 Claims. (Cl. 211—16.)

1. In a cabinet for phonograph records, in combination, a plurality of compartments, each having a slidable carriage frame therein, each said frame being adapted to support a record, means responsive to the movement of any said frame to permit release of the corresponding record, and means to prevent release of any other record while said record is released.



1,351,334. BASKET-FASTENER. JAMES FRANCIS KENNEDY, Charleston, S. C. Filed Feb. 27, 1920. Serial No. 361,854. 5 Claims. (Cl. 217—124.)

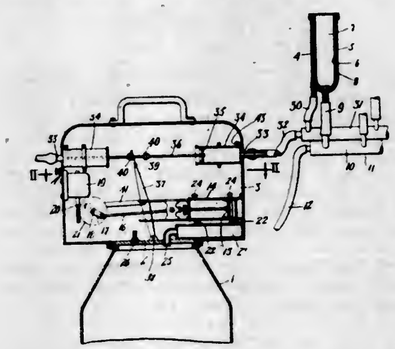
1. A cover fastener for baskets having rim bands and having a cover provided with inwardly converging slots extending through its edge, consisting of a clip having one bent end extending upwardly beneath the lower edge of the rim band and provided with a hook at its opposite end exteriorly of the rim band, extending wires anchored to the clip and projecting inwardly over the basket edge



and upwardly through the inner ends of the said slots of the cover, the extremities of said wires projecting outwardly and downwardly over the edge of the cover between its slots and engaged with the hook of the clip, as described.

1,351,335. LAUNDRY-HANGER. MACIEJ KORKUS, Providence, R. I. Filed Oct. 27, 1919. Serial No. 333,518. 1 Claim. (Cl. 68—3.)

A support for endless clothes lines including a frame, means to detachably rigidly connect said frame to the inner side of a window casing so as to project inwardly from the latter, a laterally extending arm slidable on said frame, a pulley carried by said arm over which the endless clothes line is adapted to travel, a block carried by the inner end of said frame, a screw threaded through said block and rotatably connected at its outer end to said arm, and means for operating said screw.



1,351,336. EMERGENCY-TANK FOR AUTOMOBILES. SAMUEL H. LOVE, Sanford, Fla., assignor of one-third to Henry Meacham, Sanford, Fla. Filed Sept. 5, 1917, Serial No. 189,777. Renewed Jan. 14, 1920. Serial No. 351,495. 1 Claim. (Cl. 280—164.)

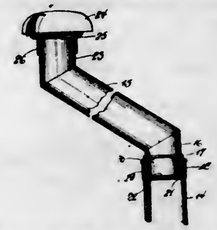
The combination with an automobile including a running board, of a main fuel supply tank carried thereby, an auxiliary tank suspended from the under face of said

running board and positioned closely adjacent the same, the auxiliary tank corresponding substantially in length and width to the running board and the running board acting to support and to cover said auxiliary tank so as to protect the same from injury while permitting ready access to the auxiliary tank, said auxiliary tank being positioned below the main tank, a pipe establishing communication between the main tank and the auxiliary tank at the top thereof, a control valve in said pipe, and means for draining fuel from said auxiliary tank.

1,351,337. MILKING-MACHINE. HERBERT A. MCARTHUR, Montreal, Quebec, Canada. Filed June 10, 1918. Serial No. 239,108. 5 Claims. (Cl. 31—100.)

1. In a milking machine the combination of double chambered teat cups, double acting pumping means acting on one stroke to force fluid pressure into the outer chambers of one cup or group of cups and at the same time create suction in the outer chamber of another teat cup or group of teat cups and on the opposite stroke to reverse such conditions of suction and pressure, and means for supplying suction to the inner teat cup chambers.

2. In a milking machine the combination of double chambered teat cups, a pumping system comprising a reciprocating piston and cylinder means adapted to produce pressure in one part of said system and simultaneously produce suction in another part of said system and vice versa, connections between the outer chambers of different teat cups or groups of teat cups and the respective parts of the pumping system, and means for applying suction to the inner teat cup chambers.



3. A portable milking unit comprising a milk pail, a lid therefor, a casing mounted on the lid, a vacuum pump in the casing, a pair of pulsation cylinders in the casing, pistons in the cylinders connected by a common piston rod, a motor in the casing, driving connections from said motor to said vacuum pump and to said piston rod, and groups of double chambered teat cups, the outer chambers of the cups of the respective groups being connected to the respective pulsation cylinders and the inner chambers of the teat cups being connected to discharge into the milk pail.

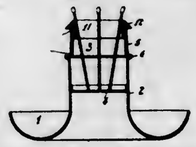
4. In a milking machine the combination of teat cups, a suction pump and means for determining the degree of suction to be produced by the pump by providing the pump with a definite clearance proportioned to the degree of suction to be produced.

5. In a milking machine the combination of teat cups, a suction pump for producing suction therein and means for varying the clearance of the pump to adjust the degree of suction to be produced.

1,351,338. LUBRICATING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. CHARLES L. MAGEE, Washington, D. C. Filed Dec. 30, 1919. Serial No. 348,360. 4 Claims. (Cl. 184—105.)

4. A lubricating attachment for engines having a breather pipe, comprising a pipe equipped with a spud upon one end, a thimble adapted to fit over said spud, said thimble having an inturned flange at its end, a screen removably fitting in the thimble and supported on said flange, said spud being adapted to engage in the

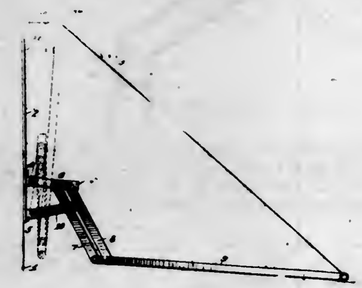
thimble against the screen for holding the latter to the flange, and said thimble being adapted to engage in said breather pipe, and means on the upper end of the device for supporting the same on the engine.



1,351,339. SUNSHADE. OSCAR MAUREB, Richmond Hill, N. Y. Filed Apr. 1, 1920. Serial No. 370,552. 6 Claims. (Cl. 296—95.)

1. The combination with windshield standards and a windshield panel pivotally hung therebetween and provided with clamps at the pivotal supports thereof for securing the same in different angularly adjusted relations, of a sunshade panel overstanding said windshield panel and provided with bearings at the opposite ends of the same, adjustable supporting brackets for the sun shade having base portions pivotally engaged with and detachably held by the windshield panel clamps and having offset oppositely disposed bearing elements at the opposite sides of the windshield pivotally engaged with the bearings at the ends of the sunshade panel, and means for securing the sunshade panel in various angularly adjusted relations over the windshield panel.

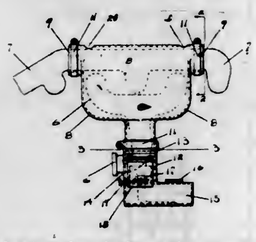
2. A sunshade for attachment to automobile windshields comprising a substantially U-shaped frame, a tubular element bridging the open side of said frame, supporting brackets having spindles projecting through the sides of said frame and adjustably engaging in the ends of the tubular element, said brackets having angularly projecting base portions perforated to receive supporting means, and a covering over the frame thus formed, said frame being held together by the spindles of the supporting brackets.



1,351,340. MATCH-HOLDER. JACOB E. NEAHR, New York, N. Y. Filed Mar. 4, 1918. Serial No. 220,159. 1 Claim. (Cl. 206—20.)

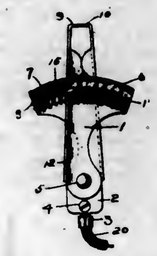
In combination, a match-safe of slightly tapering form and a band of igniting material forced upon the taper

and mechanically held in position thereby against accidental movement, said match-safe having a surface roughened to prevent the band from slipping or creeping around the safe.



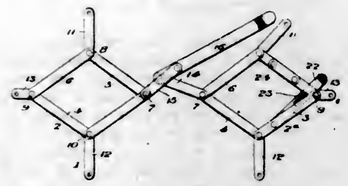
1,351,341. AWNING-ARM. JOSEPH F. O'BRIEN, West New York, N. J. Filed June 19, 1917. Serial No. 175,570. 2 Claims. (Cl. 156—42.)

1. An awning support comprising a pair of awning arms at opposite sides of the awning, each side having a base member pivoted at a fixed point to the window frame, two parallel intermediate members pivotally connected to said base member contiguous to the outer end thereof, an outer member connected at one end to the awning and having a pivotal connection at its opposite ends with the inner of said two parallel members and a connection intermediate its ends with the other of said two parallel members, a supporting member pivoted to one of said intermediate members at one end and to a fixed point on the window frame at the opposite end and means for limiting the extension movement of said members.



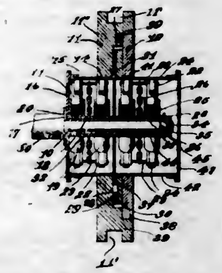
2. An awning support comprising a pair of awning arms at opposite sides of the awning, each side having a base member pivoted at a fixed point to the window frame, two parallel intermediate members pivotally connected to said base member contiguous to the outer end thereof, an outer member connected at one end to the awning and having a pivotal connection at its opposite end with the inner of said two parallel members and a connection intermediate its ends with the outer of said two parallel members, a supporting member pivoted to one of said intermediate members at one end and to a fixed point on the window frame at the opposite end and an extension on the base member adapted to abut against one of said two intermediate members to limit the extension movement of the awning arm.

1,351,342. HEATER. FRANK R. PETTITT, Portland, Oreg. Filed Jan. 29, 1919. Serial No. 273,896. 3 Claims. (Cl. 263—5.)



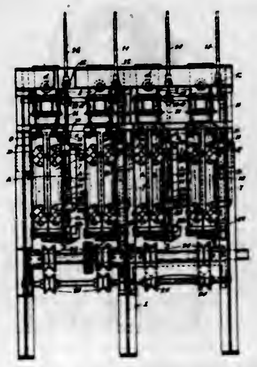
1. In a heater for hydro-carbon motors, a casing adapted to inclose the gas intake manifold of said motor; a downwardly projecting open flange upon said casing; a heater; an upwardly projecting flange upon said heater; and means to secure said flanges together.

1,351,343. TEST-CLIP. GEORGE H. REMPES, Cleveland, Ohio. Filed Jan. 16, 1917. Serial No. 142,639. 2 Claims. (Cl. 24—252.)



2. In a device of the class described, the combination of two rearwardly pivoted clamping members provided with jaws arranged to be distended to grip an electrical conductor, a semi-circular depression formed in each of said members for supporting a spiral tension spring, said spring serving to maintain said jaws in engagement, said depressions partially housing said spring when said jaws are in engagement and to practically house said spring when said jaws are distended.

1,351,344. PACKAGE-TIE. WILLIAM FERDINAND RILEY, Spokane, Wash. Filed May 22, 1919. Serial No. 298,944. 6 Claims. (Cl. 24—24.)



4. In a tying or binding device, a plurality of sets of lazy tongs each having means for receiving the tying means, longitudinal links pivoted to said lazy tongs, a lever pivotally connected to said longitudinal links, a latch pivoted to one of the lazy tongs adapted to receive the end of the lever and a pin on the said lazy tongs engaging said latch and thereby locking the lever thereon.

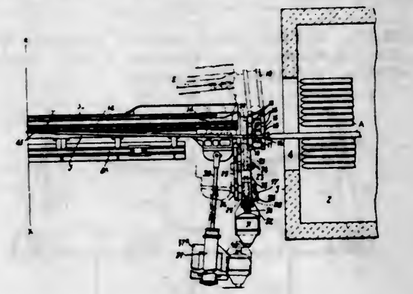
1,351,345. VEHICLE-WHEEL. BENJAMIN W. ROTH, Allentown, Pa. Filed Nov. 7, 1917. Serial No. 200,750. 6 Claims. (Cl. 152—45.)

1. The combination with an axle, a hub including a cylindrical casing inclosing the axle, and means for communicating rotary movement from the axle to the hub; of shock absorbing members on the axle within the hub, each having an element yieldingly distended into normal contact with said casing, a chain encircling said axle, and chains radiating from it and each connected with one of said elements.

1,351,346. INGOT-MOLD. JOHN T. ROWLEY, Pittsburgh, Pa. Filed Dec. 8, 1916. Serial No. 135,792. 7 Claims. (Cl. 22—144.)

1. In a casting apparatus, the combination of a mold comprising two sections, the said sections being connected by toggle members, means to operate said toggle members, a water jacketed neck piece constituting the upper end of the mold sections adapted to receive the metal initially, the lower end of said mold sections being closed by a water jacketed door, and means to swing said door into open position simultaneously with the opening of the mold sections.

1,351,347. DRILL-CHUCK. CHARLES LYON RUSSELL, New York, N. Y. Filed Dec. 6, 1918. Serial No. 265,629. 2 Claims. (Cl. 279—72.)

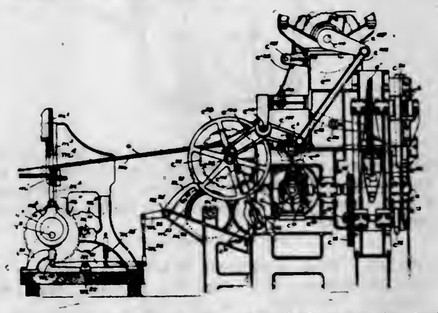


1. In a chuck, the combination with a sleeve, of a jaw carrier mounted in and rotatable relatively to said sleeve, the jaw carrier having a centrally disposed tool seat and jaw pockets extending outwardly from such tool seat, and a substantially flat jaw in each such pocket having a rounded tool engaging face at its inner edge and a rounded cam engaging face at its outer edge, the sleeve being provided on its inner face with jaw engaging cams, the width of the jaw pockets and the width of the jaws being of such relative proportions that the jaw has a loose fit in the pocket and is capable of inward edgewise movement by the action of the cam and is also capable of a limited rolling movement against the cam and against the tool when the said rounded edge faces are engaged by these.

1,351,348. METHOD OF AND APPARATUS FOR MAKING BUTT-WELD PIPES. JOHN SHEDDON, McKeesport, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 22, 1918. Serial No. 263,710. 8 Claims. (Cl. 205—12.)

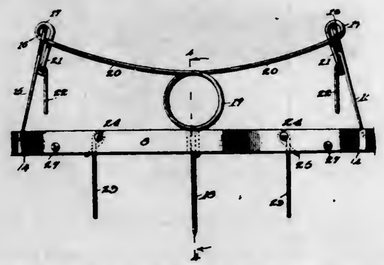
1. The method of making butt-weld pipe which consists in connecting one end of the heated pipe skelp to the traveling chain of a draw bench, and thereby pulling the skelp through a welding bell, and shifting the relative position of the draw chain and welding bell to thereby move the chain sidewise out of alinement with the axial center of said bell and into substantial alinement with another bell and to pull the skelp through said first bell in a path at an angle to the lengthwise center of the traveling draw chain in the welding operation.

3. In the manufacture of butt-weld pipes, the steps consisting in attaching the pipe tongs to the traveling draw chain of a draw bench having a series of welding bell holders, after applying a welding bell to one of said holders, and shifting the position of the draw bench relative to the welding bell after attachment of the tongs to the draw chain to thereby draw the attached skelp through the welding bell in a path at an angle to the line of travel of the draw chain and to aline the draw chain with another bell holder in said series of holders.



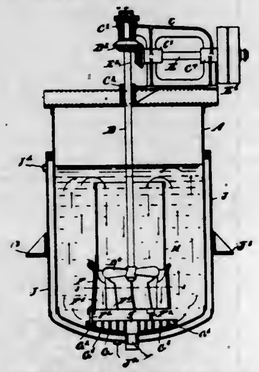
1,351,349. TIE. ALBERT M. SNIDAOWSKI, U. S. Army. Filed Sept. 9, 1919. Serial No. 322,703. 1 Claim. (Cl. 2—83.)

A necktie of the type described comprising a knot plate, a knot strip associated with the knot plate, said knot plate being of inverted substantially cone-shaped formation, inwardly directed flanges carried by the upper and the side edges of the plate and overlying the same, the outer edges of the side flanges adjacent their lower ends having an opening therein, a pair of hooks carried by the knot strip adapted to be received in said openings with the knot strip folded about the plate in simulation of a four-in-hand, and fastening means carried by the knot strip for holding the free end thereof in position.



1,351,350. INTERPOSED-FABRIC MACHINE. WILLIAM S. SOUTHWICK, Clinton, Mass., assignor, by mesne assignments, to Wickwire Spencer Steel Corporation, a Corporation of Massachusetts. Filed Apr. 22, 1918. Serial No. 230,027. 16 Claims. (Cl. 140—112.)

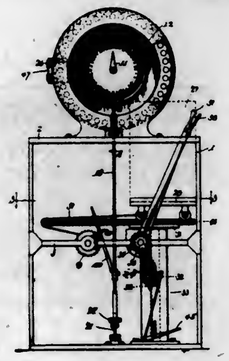
1. In a machine of the class described, means for feeding strand members, means for feeding stay members,



means for feeding fabric between said members, means for forming cross rows of perforations in said fabric, means for welding the strand and stay members through said perforations, and means for changing the distance of travel of the fabric from the point of perforation to the point of welding.

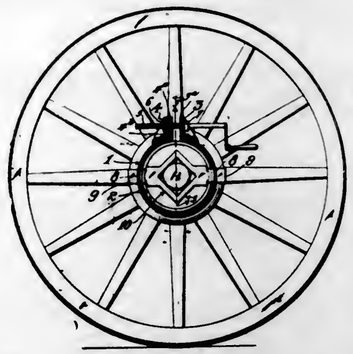
1,351,351. GOPHER-TRAP. JOSEPH FREDRECH STANKIEWICZ, Bandon, Oreg. Filed Jan. 6, 1920. Serial No. 349,761. 3 Claims. (Cl. 43—86.)

1. In a trap the combination with a frame comprising metal side bars and a laterally elongated guide loop at each end, spring mechanism held in said frame centrally of said elongated loops, choker ring arms associated with the said spring mechanism and actuated thereby, said arms extending from said spring mechanism to the outer ends of said frame and above the elongated loops of the frame, choker rings loosely hung at the outer ends of said arms and guidedly held in the elongated loops, a detent supporting loop at the outer end of said arms, a detent pivotally hung to said detent supporting loop, triggers mounted between the side bars of the frame intermediate the laterally elongated end loops and the central part of said frame, and means for anchoring the trap against relative movement.



1,351,352. EMULSIFIER. ROBERT H. STEVENS, Larchmont, N. Y., assignor to Stevens Brothers, New York, N. Y., a Firm. Filed Mar. 11, 1920. Serial No. 365,099. 12 Claims. (Cl. 259—97.)

1. In an apparatus of the character set forth, a container, means to induce an axially directed stream in the contents of said container, and means located in the path of such stream whereby the latter is baffled against outward movement.

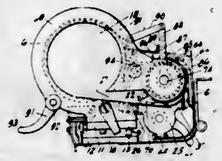


1,351,353. BOX-MARKING MACHINE. ROBERT F. STUART, Kokomo, Ind. Filed Dec. 19, 1918. Serial No. 267,422. 15 Claims. (Cl. 197—6.7.)

1. In a package imprinting machine, printing means, means to move the printing means to printing position, package carrier means, means common to the moving means and to the carrier means to actuate each, and

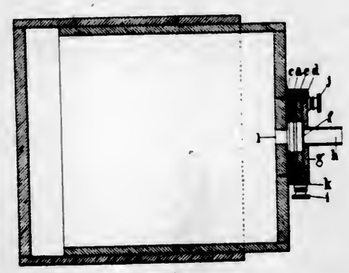
means whereby said common means may be continuously operated without effecting actuation of the moving means.

1,351,354. VEHICLE-HUB WRENCH. GEORGE TOWNILL, PETER TOWNILL, and GEORGE SAMPSON, Plainfield, Ill. Filed Mar. 19, 1920. Serial No. 367,030. 1 Claim. (Cl. 81—75.)



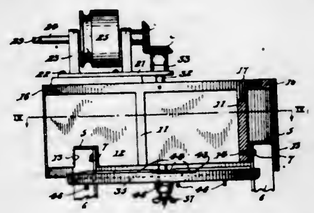
A hub wrench for removing axle nuts comprising a flexible band, the ends of said band being spaced apart, lugs carried by the ends of the band, a threaded bolt passing through apertures in said lugs, a rectangular shaped nut threaded on said threaded bolt and disposed in a recess of one of the lugs, a shoulder carried by the threaded bolt and engaging the outer face of the other lug, means whereby said bolt may be rotated to draw the lugs together and clamp the band on a hub, there being diametrically disposed apertures in the flexible band, a socket wrench provided with oppositely disposed arms, said arms being slidably mounted in the diametrically disposed apertures so that said socket wrench will assume a substantially central position for the reception of axle nuts when the clamping band is applied to various sizes of hubs.

1,351,355. TYPEWRITING-MACHINE. BENJAMIN W. TUCKER, South Orange, N. J., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Original application filed May 26, 1916, Serial No. 100,037. Divided and this application filed Sept. 17, 1917. Serial No. 191,660. 17 Claims. (Cl. 197—60.)



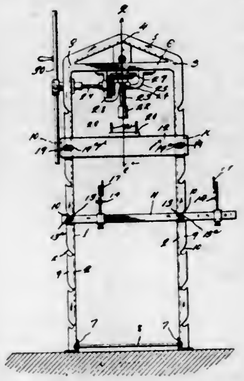
1. In a typewriting machine, the combination of a carriage, a substantially cylindrical work sheet holder having

open ends and a longitudinally extending throat portion having an entrance into said work sheet holder throughout the length of the holder at the forward side of said holder, a platen located forward of the work sheet holder, a roll located beneath the platen and coöperating therewith to



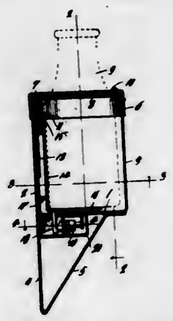
hold the work sheet between the platen and the roll, and line spacing means embodying a curved line space lever operatively connected with the platen and extending rearwardly and downwardly about the work sheet holder to a point below the path of the work sheet.

1,351,356. SOUND-DETECTING DEVICE. WILLIAM SANSOME TUCKER, Thames Ditton, England. Filed Jan. 6, 1919. Serial No. 269,902. 12 Claims. (Cl. 179—101.)



1. A sound detecting device comprising an electrically heated thin conductor in combination with a sound box and with means for producing a small blast of air past the electrically heated thin conductor into the sound box, the said conductor being arranged between the said means and the sound box, as and for the purpose set forth.

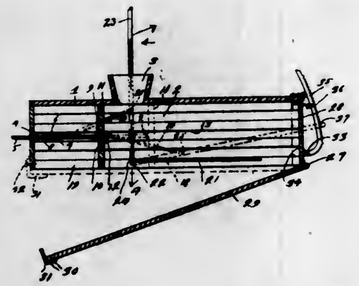
1,351,357. VEGETABLE-CUTTER. FRANK TURK, Casselman, Pa., assignor of one-fourth to Frank Gacnik, Johnstown, Pa., and one-fourth to Josip Hocevar, Rockwood, Pa. Filed July 2, 1919. Serial No. 308,137. 1 Claim. (Cl. 146—11.)



A vegetable cutter comprising a pair of spaced horizontal parallel bars, supporting legs secured at their upper ends to the ends of said bars, a frame comprising crossed spaced flat vertical members, one of said bars lying flatly against the outer face of one of said crossed members and rigidly secured to the latter, another of said crossed members being cut out at its lower edge for reception of the other bar therein, a cylindrical casing surrounding said frame and contacting the ends of the crossed members thereof, said casing being also cut out at its lower edge for reception of the ends of said bars, said crossed members of the frame providing an open space for the introduction of a vegetable to be cut, a disk upon said crossed members having an opening therethrough coincident with said space, a horizontal rotary cutter member operatively positioned adjacent the lower edges of the crossed members, and means to rotate said cutter member for causing the vegetable to be cut as the same is fed downwardly through said space.

1,351,358. HAND-PRESS FOR SHAFTING. HENRY C. URBANER, Naperville, Ill. Filed Dec. 13, 1919. Serial No. 344,757. 7 Claims. (Cl. 153—53.)

1. A press for straightening shafts and the like said press comprising a U-shaped frame formed from channel iron, the flanges of said channel iron being outwardly disposed, the sides of said U-shaped frame having their flanges provided with inwardly and downwardly extending notches in registration with each other and in registration horizontally to each other, said notches forming means for supporting a shaft supporting bed, a vertically movable shaft adapted to be moved downwardly into engagement with a shaft on the shaft supporting means, and means for moving said vertically disposed shaft upwardly or downwardly as desired.

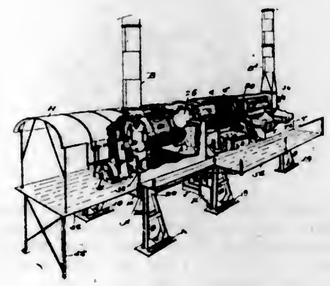


1,351,359. COMBINED MILK-BOTTLE HOLDER AND LOCK. FREDERIC WAMBACK, Greenwich, Conn. Filed May 8, 1919. Serial No. 295,554. 5 Claims. (Cl. 232—41.)

1. A bottle rack comprising a base, arms extending upwardly from the base, an annular member connecting the

upper ends of the arms and having an inner flange, an inclosed locking mechanism disposed below the base, contractile bottle gripping means located within the annular member just below the flange thereof, an operating bar having a bottle engaging rest at its lower end and having its upper end connected with the bottle gripping means and a locking element movable with the operating bar and adapted to pass through an opening in the bottom and cooperating with the locking element to secure the parts in locked position.

1,351,360. BALING-PRESS. SOLOMON F. WEITMAN, Live Oak, Fla. Filed Nov. 13, 1917, Serial No. 201,787. Renewed Jan. 29, 1920. Serial No. 354,886. 3 Claims. (Cl. 100—4.)



1. In a hay baling machine, a frame having a baling chamber provided with guides, a plunger mounted in said chamber, means mounted in said guides and connected to the plunger, whereby the plunger may be guided in its movements, and a U-shaped lever having its arms pivoted to the sides of the baling frame and having link connections with said means for moving the plunger, the forward end of the baling chamber having on its outer face a pivoted spring tensioned rack, to be engaged by the arch of the U-shaped lever to hold the same tilted forwardly and downwardly as the plunger moves forwardly.

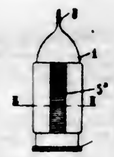
3. In a hay baling machine, a frame having a baling chamber provided with guides, a plunger mounted in said chamber, means mounted in said guides and connected to the plunger, whereby the plunger may be guided in its movements, and a U-shaped lever having its arms pivoted to the sides of the baling frame and having link connections with said means for moving the plunger, said baling chamber having a forward hinged end, the lower portions of the side walls of the chamber having elongated slots provided with offset portions at their rear ends to receive the pivot pins, whereby the lever may be pulled forwardly by removing the pivot pins from the offset portions and causing them to move longitudinally in the slots, the forward face of the forward end having a pivoted spring tensioned rack to be engaged by the arch of the U-shaped lever to hold the same tilted forwardly and downwardly when the forward end piece is closed, to hold the plunger in its forward position.

1,351,361. APPARATUS FOR PREPARING PAVING MATERIALS. LAWRENCE BATES WEST, Chattanooga, Tenn., assignor to One Fire Asphalt Plant Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 7, 1915. Serial No. 44,338. 20 Claims. (Cl. 94—41.)

20. A plant for manufacturing paving material comprising, in combination, a furnace, a pair of stacks one of which is directly connected to the furnace, a drying drum constituting a connection between the furnace and the other of said stacks and valvular means for each of said

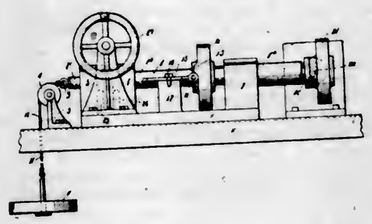
stacks for controlling the passage of the products of combustion therethrough.

1,351,362. NAME-PLATE AND ANNUNCIATOR. WILLIAM H. BAILEY, New Lexington, Ohio. Filed Mar. 1, 1919. Serial No. 280,017. 1 Claim. (Cl. 116—133.)



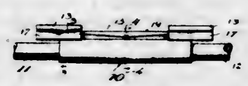
Office indicating means comprising an annunciator dial on the outside of the office door, a plate covering the dial and having an observation opening at one side to expose matter on the dial and having other openings at its top and bottom and having a central and other projections on the side adjacent the door, cards opposite the top and bottom openings bearing the name and office hours of the person respectively, a dial on the inner side of the door, a shaft extending through the door and journaled at its outer end in the central projection of the covering plate and at its inner end in the inner dial, and having the outer dial secured to its outer end, and a hand secured to the inner end of the shaft and coöperating with the inner dial.

1,351,363. PROCESS FOR REMOVING TAR FROM PRODUCTS OF THE DISTILLATION OF WOOD OR COAL. EMILE AUGUSTIN BARBET, Paris, France. Filed Nov. 6, 1918. Serial No. 261,427. 5 Claims. (Cl. 203—6.)



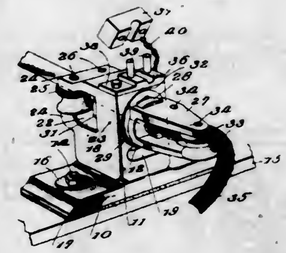
1. A process of removing the tar from the vapors and gases given off in the destructive distillation of wood or coal, which comprises bringing the said vapors into intimate and methodical contact with a phenolic solvent having a higher absorbing and dissolving power for tars than has tar itself, and afterward regenerating the solvent by distillation of the mixture of solvent and tar.

1,351,364. TOILET ARTICLE. STANLEY SEPTIMUS BOOTY, Sutton, England. Filed Feb. 26, 1919. Serial No. 279,461. 1 Claim. (Cl. 132—36.)



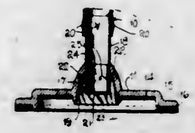
A manicure device comprising a sleeve member formed of rigid material, a prolongation on said sleeve adapted for use in treating the cuticle bordering the nails, a polishing surface and a file member secured to said sleeve.

1,351,365. CAM-CUTTING ATTACHMENT. GEORGE L. BOWER, Greenwood, Mass. Filed June 21, 1918. Serial No. 241,174. 1 Claim. (Cl. 90—13.3.)



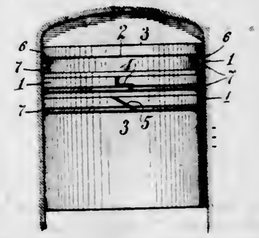
In an attachment of the class described the combination with a support, of a base mounted on said support and having a plurality of longitudinally spaced uprights rising therefrom, said uprights having bearings of different sizes, said bearings increasing successively in size from the upright at one end of the base to that in the other end thereof, a shaft of varying diameters mounted to rotate and slide in said bearings, a master cam fixed to said shaft between two of said uprights, a standard positioned on said base at one side of said shaft, a bar adjustable longitudinally on the top of said standard and having a roller at one end positioned in the path of said cam, means for exerting a yielding pull in one direction on said shaft whereby the master cam is held in yieldable engagement with said roller, and work holding means carried by one end of said shaft.

1,351,366. FEEDER-WIRE SPLICE. NEWTON K. BOWMAN, North Lawrence, Ohio, assignor to The American Mine Door Company, a Corporation of Ohio. Filed Aug. 9, 1917, Serial No. 185,386. Renewed Feb. 18, 1920. Serial No. 359,543. 2 Claims. (Cl. 287—110.)



1. A splicing device including a sleeve open along one side and provided along the sides of the opening with clamping jaws tapering in thickness toward their outer ends and undercut to provide locking shoulders tapering in width toward the centers of the jaws, and clamping members each tapering in width from one end to the other and provided at their side edges with downwardly and inwardly inclined clamping flanges for engagement against the outer faces of the clamping jaws and under faces of the shoulders of the jaws.

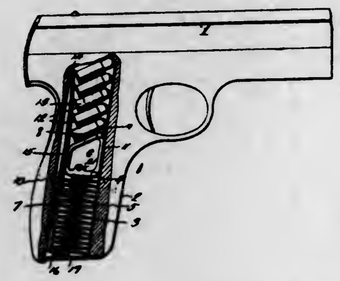
1,351,367. CABLE-GUIDE. NEWTON K. BOWMAN, North Lawrence, Ohio. Filed Apr. 29, 1918, Serial No. 231,528. Renewed Feb. 18, 1920. Serial No. 359,544. 9 Claims. (Cl. 254—190.)



8. A cable guide including a base, a body rotatable thereon, a guide yoke rotatable upon the body at an angle to the axis of rotation of the body, coacting guide rollers carried by the yoke and body respectively, and means for insulating the base with respect to a support therefor.

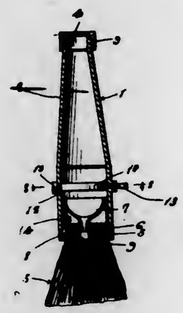
1,351,368. PIPE CLEANER AND SPRAYER. FRANCIS E. BURNS, Los Angeles, Calif. Filed Aug. 22, 1919. Serial No. 319,146. 7 Claims. (Cl. 4—1.)

1. A spraying head comprising a head proper formed upon one face to provide a circular chamber and bounded by a wall, the center of the head being formed with an outwardly extending, slightly conical, hollow boss entirely open at its inner end, and a tubular member extending through the axis of the boss and closed at its inner end, the tubular member having perforations discharging against the inner face of the boss adjacent the smaller end of the boss.



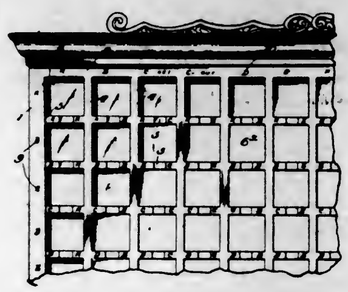
1,351,369. PISTON-RING. FRANK R. CARR, Xenia, Ohio. Filed Dec. 18, 1919. Serial No. 345,707. 1 Claim. (Cl. 74—109.)

The combination with a piston, of a one piece piston ring disconnected on one side, the said ring having an annular groove in the upper face thereof, the inner wall of said groove being parallel to the axis of the ring and the outer wall thereof being tapered outwardly and upwardly from the lower terminal of said inner wall to provide a deflecting surface for the explosive mixture while under compression, and an outer peripheral



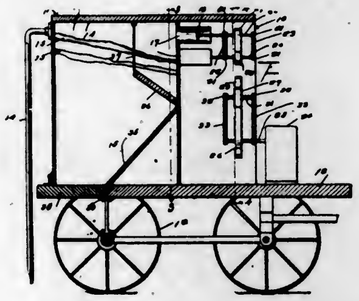
oil groove in said ring inclosed by an upper horizontal wall and a lower outwardly and downwardly tapered wall, said last named wall being terminated above the lower end of the ring, substantially as specified.

1,351,370. MAGAZINE FOR AUTOMATIC PISTOLS. RAY H. CHASE, Alexandria, S. D. Filed Feb. 18, 1920. Serial No. 359,617. 2 Claims. (Cl. 42—7.)



1. A magazine for automatic pistols comprising a casing adapted to be received by a chamber in the handle of the pistol, said casing extending upwardly and inclined forwardly, a slidable follower block disposed in said casing, a spring for forcing said follower block upwardly so that the shells within the magazine will be fed upwardly, the upper face of said follower block being inclined so that the shells will be held in an inclined position in said casing, leaf springs disposed in said casing and engaging the bases of the shells, said leaf springs being spaced from each other and from the wall of the casing so that they will vibrate during firing, thereby causing the breaking of any jam of the shells within the casing.

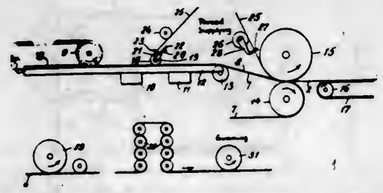
1,351,371. FOUNTAIN-BRUSH. JOSEPH CHMIELINSKI, Passaic, N. J. Filed Feb. 11, 1919. Serial No. 276,258. 1 Claim. (Cl. 15—49.)



A fountain brush comprising a hollow body having each end open, a brush threaded in one end of said body, a funnel shaped member disposed in the body and having its neck portion positioned in the brush, an annular supporting flange formed on the enlarged end of the funnel shaped member and resting on the brush and against the wall of said body to hold the neck portion within said brush, a valve in said body adjacent the funnel shaped member and adapted to control liquid thereto, and a removable closure for the other end of said body.

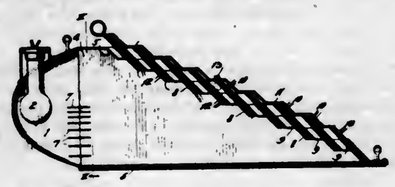
1,351,372. GENERAL-DELIVERY POST-OFFICE CABINET. JAMES B. CONINE, Fort Worth, Tex. Filed Feb. 3, 1919. Serial No. 274,663. 1 Claim. (Cl. 211—36.)

In a mail cabinet, indexing means dividing the cabinet into coöperating compartments alining in vertical and horizontal rows the index division means for each compartment bulged to project beyond the surface of the cabinet and having a finger notch providing separate promontories, said index means including main index designations for each vertical row and main index designations for each horizontal row, the main indicia of the vertical and horizontal rows being duplicated on the promontories of each compartment, the respective indicia of each compartment progressing in alphabetical order with respect to succeeding compartments of the same row to form a cabinet having alining vertical and horizontal rows of compartments indexed in alphabetical order.



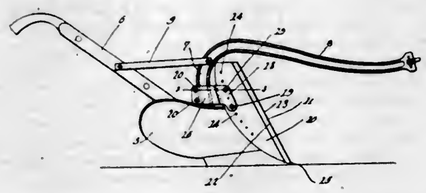
1,351,373. COTTON-PICKER. WILLIAM F. COOPER, New Orleans, La. Filed Apr. 11, 1919. Serial No. 289,309. 6 Claims. (Cl. 302—17.)

1. A cotton picker including, a casing, a plurality of spaced parallel partitions disposed within the casing thereby providing a plurality of compartments, vacuum conveying elements in communication with each of the compartments, vacuum creating elements for each of the compartments, and inclined baffle walls disposed within the compartments.



1,351,374. THREAD-REINFORCED-PAPER GUMMED TAPE. CHARLES H. CROWELL, Brooklyn, N. Y. Filed Dec. 1, 1916. Serial No. 134,349. 28 Claims. (Cl. 92—40.)

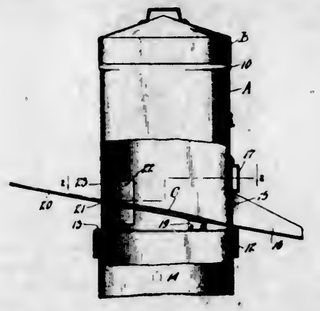
7. The process of forming thread reinforced adhesive paper which comprises forming a continuous sheet of paper, incorporating with said sheet a substantially parallel series of reinforcing cotton threads and embedding and securing said threads in said sheet of paper by felting or interlocking with the paper fiber so as to be substantially



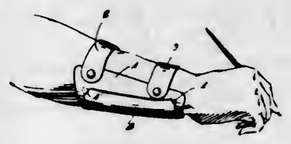
parallel to its edges so that portions of the threads extend through one side of the paper body, and applying an adhesive coating to the sheet.

1,351,375. ELECTRIC-LIGHT FIXTURE. FERNAND E. D'HUMY, Englewood, N. J. Filed Jan. 18, 1919. Serial No. 271,870. 7 Claims. (Cl. 240—1.)

3. A lighting fixture comprising a source of light, a reflector for projecting the rays emitted by the source of light, a plurality of stationary flat reflecting surfaces arranged in stepped relation at an angle to the path of the rays projected by said reflector, and a plurality of sets of reflecting plates independently shiftable to interpose the plates of either set between the stationary reflecting surfaces and the source of light.



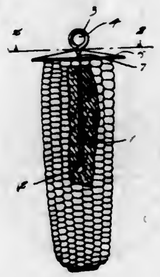
1,351,376. COLTER. ROBERT L. DILLON, Timpson, Tex., assignor of fifty-one per cent. to F. M. Davis, Timpson, Tex. Filed Jan. 3, 1920. Serial No. 349,139. 1 Claim. (Cl. 97—6.)



In combination with a plow blade having a curved forward portion and having a stock for supporting the same, a colter having a pointed end and having a knife-like cutting edge, said colter having a curved rear portion and having a plurality of openings formed therein, the openings being disposed in spaced relation with each other and in a line in spaced relation with the curved rear portion, a pair of spaced arms having openings formed at their ends, means for securing the arms to the plow stock, and said openings adapted to register with the openings in the colter, and means extending through the registering openings for securing the colter to the arms.

1,351,377. ASH-SIFTER. THOMAS FRED FITZBERGER, Baltimore, Md. Filed Jan. 13, 1919. Serial No. 270,813. 2 Claims. (Cl. 83—60.)

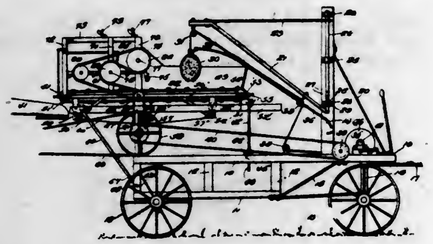
1. An ash sifter comprising a cylindrical casing, a cover therefor, a downwardly inclined chute located upon one side of the casing and communicating with an opening in the side thereof, a sieve disposed within and extending in an inclined plane substantially in line with said chute entirely across the casing and positioned to discharge at its lower side through the opening and upon the chute, means for supporting said sieve at its periphery within the casing, and a handle attached to said sieve and extending through a segmental slot in said casing opposite said chute for oscillating said sieve.



1,351,378. WRIST-BLOTTER. GUSTAV FRANKEL, Seattle, Wash. Filed June 19, 1918. Serial No. 240,800. 2 Claims. (Cl. 120—25.)

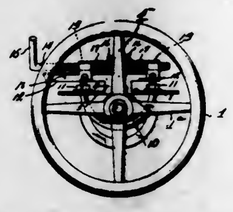
1. A blotter to be worn on the wrist, the same comprising an oblong rectangular base of flexible material having diagonal slits in its corners to receive the corners of a blotter and detachably retain it in place, and having integral straps at one side near the ends thereof projecting to unequal distances, and complemental fastenings at the outer ends of the straps and at the opposite side of the base.

1,351,379. CORN-HANGER. CLIFTON ELROY GILLETT, Verdigre, Nebr. Filed Mar. 26, 1919. Serial No. 285,228. 1 Claim. (Cl. 34—26.)



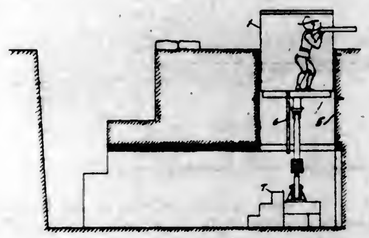
A corn hanger comprising an ear supporting element, and a conical shaped guard having an opening in its apex receiving the supporting element, said guard having a slot extending from the opening through the periphery thereof to give said guard flexibility and said slot being of a width smaller than the diameter of the supporting element.

1,351,380. CHILD'S GARMENT. NETTIE GREEN, Cambridge, and SAUL MATISON, Boston, Mass. Filed Aug. 12, 1918. Serial No. 249,444. 4 Claims. (Cl. 2—145.)



1. In a garment having a waist and bifurcated trunk portion, each provided with a tapering flap extending from the crotch to the upper edge of the garment, said flaps being permanently secured in overlapping relation at the crotch and temporarily secured at the upper edge of the garment.

1,351,381. SELF FEEDING AND PITCHING MACHINE. FRANK HAMILTON, Burlington, Okla. Filed July 2, 1918. Serial No. 243,031. 13 Claims. (Cl. 214—89.)



1. In an apparatus of the class described, a receptacle, a conveyer device forming the bottom of said receptacle, a fork device substantially at right angles to the conveyer device, means for moving said fork device vertically and horizontally to move the contents of the receptacle toward the conveyer device, another fork device substantially in parallel relation to the conveyer device, means for moving said last mentioned fork device horizontally and vertically to move the contents of the receptacle longitudinally of the conveyer device.

1,351,382. PLOW-GUIDE-WHEEL HOLDER. GEORGE HAZELMAN, West Brooklyn, Ill. Filed Oct. 31, 1919. Serial No. 334,678. 3 Claims. (Cl. 74—33.)

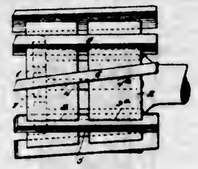
1. A holder for tractor guide wheels of tractors, said holder comprising a bracket which may be supported in any suitable manner adjacent one side of the wheel, said bracket having rotatably mounted in bearings thereof a transversely disposed bolt, lugs spaced from each other and carried by said bolt and means whereby said lugs may be maintained in engagement with each side of a spoke of the guide wheel or out of engagement therewith.

1,351,383. DISAPPEARING TURRET. SAMUEL E. HITT, Elyria, Ohio. Filed Mar. 27, 1918. Serial No. 224,962. 2 Claims. (Cl. 89—37.)

1. In apparatus for defensive warfare, a manually operated turret for machine gunners consisting of a cylindrical metallic casing embedded in the ground, a cylindrical metallic turret chamber movable within the said casing, counterbalance means for the said turret chamber, a supporting track mounted on the said casing, a carriage to run on the said track, means for preventing relative rotative movement of the turret chamber and carriage, a supporting rod with a rack mounted on the said carriage, a hand wheel and a pinion engaging the said rack mounted within and on the said turret chamber for the purpose of raising and lowering the same, and means for locking the said hand wheel to hold the said turret chamber at any desired elevation, substantially as specified.

1,351,384. PUZZLE. IVAN L. HOFFER, Marcus, Wash. Filed Oct. 11, 1919. Serial No. 329,998. 1 Claim. (Cl. 46—41.)

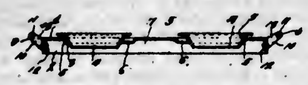
A puzzle comprising a member having spaced coils and arms extending therefrom and mutually united at their extremities, and a second member having spaced coils and arms extending therefrom and mutually disconnected, the arms of the second mentioned member being of too great a length to permit of their passage between the arms of the first mentioned member and of their extremities past the connection between the connected extremities of the said arms of the first mentioned member in any relative position of the two members when interengaged, the coils of the second mentioned member being initially engaged with one of the arms of the first mentioned member.



1,351,385. PROCESS FOR MANUFACTURING OF AN ELASTIC IMITATION HEMP. TOMOTAKE HONDA, Ongagun, Japan, assignor to Heijiro Nishimura, Tokyo, Japan. Filed July 3, 1919. Serial No. 308,368. 3 Claims. (Cl. 91—68.)

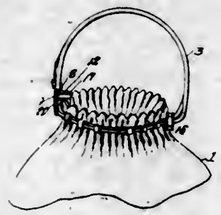
1. The process for manufacturing elastic imitation hemp from cotton thread or cloth, consisting of first coating the cotton thread or cloth with a size or paste made from the roots of the hydrosme rivieri and then treating the same with tannic acid.

1,351,386. MILLING-CUTTER. WILLIAM ALFRED JAMES, Woonsocket, R. I. Filed Apr. 8, 1918. Serial No. 227,305. 4 Claims. (Cl. 29—105.)



1. A milling tool comprising a pair of relatively axially and rotatably movable members, tool elements mounted

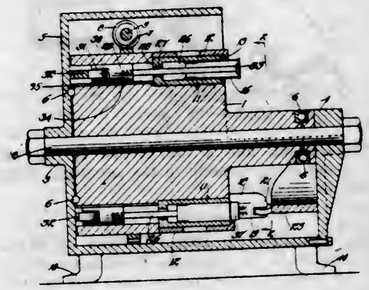
on the members at different angles to the axis thereof, and means for moving the members axially one with re-



spect to the other, whereby the tool elements cause relative rotation of the members to clamp the elements therein.

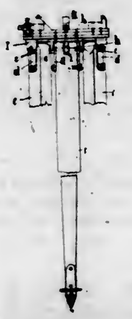
1,351,387. PIE-PLATE HOLDER. EOLINE BALL JESSE, Nuttsville, Va. Filed June 30, 1916. Serial No. 106,841. 1 Claim. (Cl. 126—337.)

A pie plate holder formed from a single sheet of material, said holder comprising an enlarged body portion having its edges provided with depending marginal flanges, said body plate having a plurality of pie plate receiving openings, the marginal edges of each pie plate receiving opening having a depending annular inwardly inclined flange, said inclined flange being inclined at substantially the same inclination as the body of the pie plate, said body plate having depressions adjacent the sides of the pie plate opening and disposed at the inner edges of the openings, the pie plate opening flanges terminating at each side of the depression, the depth of the depressions being the same as the depth of the flanges of the pie plate openings, thereby forming an engaging edge adapted to engage the side of the pie plate, said depressions forming means whereby the hand may be placed in a position to grasp the pie plates and remove them from the body plate openings.



1,351,388. LOCKING DEVICE FOR MAIL POUCHES OR BAGS. JOHN KABACI, Wyano, Pa., assignor of one-half to Charles Hess, Wyano, Pa. Filed Dec. 9, 1919. Serial No. 343,623. 5 Claims. (Cl. 150—23.)

1. In an apparatus of the class described, the combination with a pouch, of a lock secured to said pouch, a catch device secured to said pouch, and a loop on said pouch and extending through said lock, whereby the loop may be drawn through the lock for closing the pouch and then fastened to the catch device for producing a handle on the pouch.

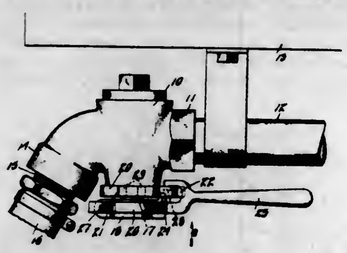


1,351,389. MACHINE FOR RE-FORMING AMMUNITION-SHELL CASINGS. FRANK LEMING, Hingham, Mass. Filed July 24, 1919. Serial No. 312,066. 11 Claims. (Cl. 153—32.)

5. A machine for reforming ammunition shell casings comprising a rotary carrier having mounted therein a die shaped to the contour of the casing in its true form, means for rotating the carrier, a movable presser member which is mounted on said carrier and which is movable into and out of alinement with the die in addition to its movement bodily with the carrier in a rotary path, means which during the rotation of the die carrier causes the said presser member to move inward when in its alined position and

thereby force the casing into the die, if a casing has been properly positioned therefor at the entrance to the die, means for causing the retraction of the presser member from the die, means for turning the presser member out of alinement with the die after it is retracted, and means for again moving the presser member into alinement with the die.

1,351,390. TRIPOD AND LIKE SUPPORT. FRANK MICHAEL LEWIS, Pimlico, London, England. Filed Jan. 4, 1919. Serial No. 269,729. 5 Claims. (Cl. 248—43.)



3. A tripod or like support comprising a plurality of legs, each of which is substantially of rectangular section at its upper end, gradually changing to circular section in the middle and tapering off toward the bottom, a fitting supported upon said legs and means for drawing said fitting and said legs firmly into contact so that each leg contacts at four points with said fitting, substantially as described.

1,351,391. SELF-LOCKING ANGLE-COCK. ROBERT E. MCGAHEY, Alexandria, Va. Filed Nov. 15, 1919. Serial No. 338,203. 4 Claims. (Cl. 251—165.)

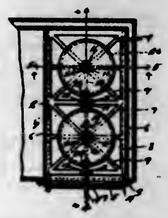
1. An angle cock comprising a housing, a turning plug, a segmental flange formed upon the housing and provided at either extremity with a stop and having a segmental slot formed in its face, a disk rigidly secured to the turning plug and having a lug fitting and movable in the slot,

a handle member provided with a collar embracing the disk and proportioned to engage against the stops at each

limit of movement, and a lug carried by the handle adapted to engage an opening in the segmental flange at either limit of movement.

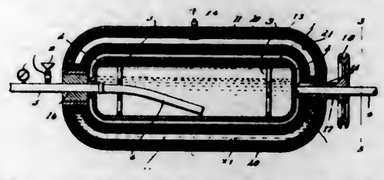
1,351,392. RELIEF-MAP AND PROCESS OF MAKING SAME. LOUIS B. MANHEIMER, Washington, D. C., assignor, by mesne assignments, of one-third to Louis B. Manheimer, one-third to Fleming Newbold, and one-third to Frank T. Fuller, Washington, D. C. Filed Aug. 2, 1919. Serial No. 315,013. 61 Claims. (Cl. 35—6.)

FINISHED MAP.



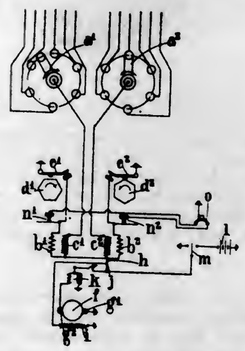
1. A process of making relief maps, consisting of forming a model of a relief map by carving out and building up, forming a metallic die and counter die of the model, molding a matrix to the form of the relief map, transferring to the matrix the written and drawn features of the map which is being copied, flattening the matrix, reproducing the flattened matrix, and molding the reproduction to the relief form.

1,351,393. TRANSMISSION MECHANISM. CHILTON M. MARSHALL, Elton, La., assignor of one-half to R. E. Powell, Jefferson Davis parish, La. Filed Dec. 20, 1918. Serial No. 267,735. 1 Claim. (Cl. 74—59.)



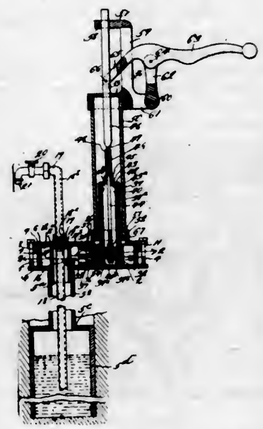
A transmission mechanism, including a yoke, whose arms are formed into extended bearings spaced apart, a sleeve rotatable in each bearing, the inner ends of said sleeves being formed into pinions which are spaced apart, a shaft extending through said sleeves and rotatable independently thereof, an intermediate pinion mounted on said yoke and in mesh with each of the first mentioned pinions, a clutch member slidably mounted upon the shaft between said sleeves, means preventing the relative rotation of said member on said shaft, the inner ends of said sleeves being formed into oppositely facing clutches formed to engage with the corresponding ends of said member alternatively said member being automatically brought into alternative engagement with said sleeve clutches as the direction of the rotation thereof is reversed.

1,351,394. OVEN-SHELF. WILLIAM BAIRD MARTIN, Beloit, Wis. Filed Feb. 11, 1919. Serial No. 276,251. 1 Claim. (Cl. 126—338.)



An oven shelf comprising a body member adapted to be supported in an oven, said shelf being provided with a pair of spaced bearings, a shaft rotatably mounted in said bearings adjacent the upper face of the shelf, gears adjustably secured to the shaft, said bearings being provided with sockets located above the shaft, said sockets being adapted to receive pintles of article supporting plates, said adjustable gears being adapted to mesh with gears carried by the article supporting plates and means whereby the shaft may be rotated for simultaneously rotating the article supporting plates.

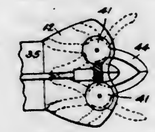
1,351,395. LIQUID-CONTAINER FOR AEROPLANES. LAUREAT L. MARTINEAU, St. John, N. D. Filed Dec. 18, 1918. Serial No. 267,324. 3 Claims. (Cl. 220—63.)



1. The combination of a liquid container, and a revoluble protection member inclosing and spaced from said container; said revoluble protection member comprising inner an douter spaced walls, a valved induction tube in the outer wall, linings at the inner sides of said walls, an inflatable tube disposed between the walls and connected to the induction tube, and liquid cement in said inflatable tube.

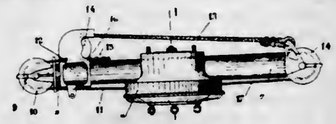
1,351,396. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ALBERT HENRY MIDGLEY, Acton Vale, England, assignor of one-half to C. A. Vandervell & Company Limited, Acton Vale, England. Filed Feb. 6, 1919. Serial No. 275,360. 3 Claims. (Cl. 123—148.)

1. An ignition system for internal combustion engines comprising in the combination of an ignition coil and circuit breaker, with a battery for supplying current to said ignition coil at starting and with a dynamo for supplying current to the ignition coil after the engine has been started, an electrical star connection between the ignition coil with its circuit breaker, the dynamo and the battery and an electrical delta connnection between the free ends of such star connection, the part of the star connection which includes the battery also comprising a connecting wire between the common point of the star connection and the battery, and a switch between the connecting wire and the battery, said switch having a movable contact arm and two stationary contacts, the movable contact arm being connected to the said connecting wire, and one of the stationary contacts being connected to the battery, while the second stationary contact of the switch is so connected as to be capable of short-circuiting both the dynamo and the ignition coil with its circuit breaker when the contact arm is in contact therewith, as and for the purpose set forth.



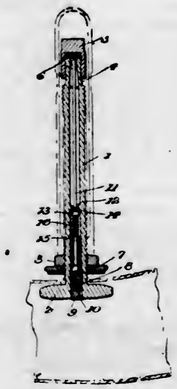
1,351,397. AIR FORCE-PUMP. JOHN M. MISSOURI, Montrose, Minn. Filed Sept. 12, 1918. Serial No. 253,770. 1 Claim. (Cl. 103—8.)

A well pump comprising a casing, said casing comprising a base adapted to be secured to a support, flanges rising upwardly from the base, a flanged cover for said casing secured to the base flanges, a downwardly extending annular flange carried by the base, a casing secured to said downwardly extending flange and having its lower end connected to a well casing, a vertically disposed pipe disposed in said downwardly extending casing and having its lower end disposed in the well casing, a sleeve telescopically engaging the pipe and registering with the opening formed by the downwardly extending threaded flange, said sleeve being of greater diameter than the pipe, an aperture in the sleeve and in communication with the chamber of the casing, the upper end of the sleeve surrounding the pipe being provided with a shoulder adapted to be engaged by the casing cover, the sleeve above the shoulder being interiorly threaded for the reception of the upper threaded end of the pipe and also for the reception of an upwardly extending discharge pipe, and means for forcing air into the casing chamber, through the sleeve aperture and downwardly extending casing to the well casing for lifting the water from the well casing upwardly through the pipe and discharge pipe.



1,351,398. COTTON-HARVESTER. JOE NEWMAN, Dallas, Tex., assignor of one-half to John L. Boyd, Dallas, Tex. Filed Feb. 8, 1918. Serial No. 216,043. 2 Claims. (Cl. 56—32.)

2. In a cotton picker, the combination with a flexible suction tube having an enlarged head at its inlet end, a pair of picker shafts journaled in said head and having worm gears on one end, a worm between and engaging said gears, and a flexible shaft for driving said worm; of a series of rubber picker fingers carried by said shafts,



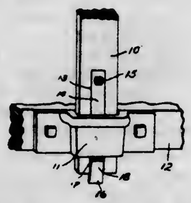
arranged successively and progressively along the same and disposed in pairs whose members are respectively opposite each other and of sufficient length to make contact and be deflected by such contact, for the purpose set forth.

1,351,399. STARTING APPARATUS FOR USE WITH INTERNAL-COMBUSTION ENGINES AND OTHER PURPOSES. ANTOINE ISIDORE ODIER, Puteaux, France. Filed July 16, 1918. Serial No. 245,214. 4 Claims. (Cl. 74—54.)

1. A starting apparatus comprising in combination a cylinder, a piston member in the cylinder arranged to be worked by pressure fluid, a pulley mounted on the piston member, another pulley mounted for turning the engine shaft, a spring attached to a fixed part and a rope attached at one end to a fixed part adjacent the cylinder and at the other end to the spring and adapted to pass over the pulley mounted on the piston member and around the other pulley for turning the engine shaft.

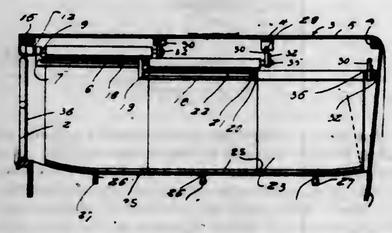
1,351,400. TIRE-VALVE. BERT PANGRAZIO, Scottsville, N. Y. Filed June 26, 1919. Serial No. 306,893. 1 Claim. (Cl. 152—12.)

A tire valve comprising a body having a bore screw threaded at one end and provided intermediate its ends with an integral annular valve seat, a valve coöperating with said seat, a pin extending through and guided by said annular valve seat and connected intermediate its ends to said valve, a collar threaded in the inner portion of said body and slidably receiving and guiding said pin, said collar being provided with a valve seat, a ball valve



engaging said second named valve seat, a guiding member threaded into said body between said first and second named valve seats, and a coil spring confined between said guiding member and said first named valve seat.

1,351,401. POWER-TRANSMISSION GEAR-WHEEL. CHARLES ALGERNON PARSONS, Newcastle-upon-Tyne, and STANLEY SMITH COOK, Wallsend, England; said Cook assignor to said Parsons. Filed May 15, 1918. Serial No. 234,827. 2 Claims. (Cl. 74—41.)

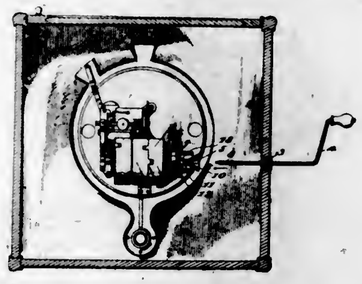


1. A pinion or gear wheel having teeth of substantially the form to give uniform distribution of force across the face of the teeth at a given load to compensate for torsional deflection and the deflection due to bending, said gear having its teeth varying progressively across the gear face in relation to the axial center of said gear, substantially as described.

1,351,402. STANDARD-LOCK. JOHN W. ROBERTS, Oklahoma, Okla., assignor of one-third to Raleigh L. Webster and one-third to William P. Cornett, Oklahoma, Okla. Filed Oct. 28, 1919. Serial No. 333,945. 1 Claim. (Cl. 280—147.)

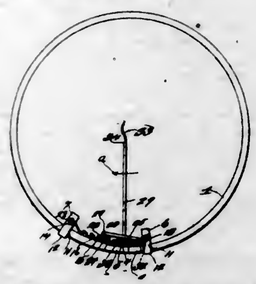
In combination with a wagon standard and the keeper in which it is seated, of a spring tongue secured at one end to and extending longitudinally of the standard and projecting at its free end beyond the extremity of the standard to form an accessible finger hold or grip below the lower end of the keeper, and provided at an intermediate point adjacent to its free end with an offset forming a shoulder for engagement with the lower edge of the keeper, said tongue being rearwardly or inwardly deflected from said shoulder to the extended grip or finger hold to facilitate insertion of the tongue carrying standard into the seat of said keeper.

1,351,403. ROLLER-CURTAIN FOR AUTOMOBILES. PETER H. SAGER, Marianna, Fla. Filed Sept. 3, 1918. Serial No. 252,406. 4 Claims. (Cl. 296—143.)



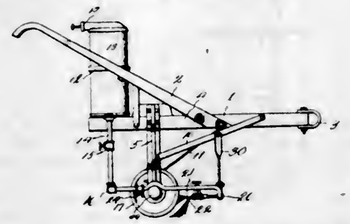
4. A device of the character set forth including an automobile body and a top, a roller pivotally connected to the top, a frame journaled to said roller, a second frame slidably connected to the first-named frame, a roller journaled to the second-named frame, a roller slidably and rotatably connected to the second-named frame, curtains for said rollers, plates pivoted to the top at spaced intervals and having openings to receive the free ends of the rollers, locking plates having keyhole slots carried by said plates and adapted to secure the free ends of the rollers of the first-named plates against endwise movement, and means securing the curtains to the body.

1,351,404. BABBITT-METAL PRODUCT AND PROCESS OF MAKING SAME. LOUIS SAPERY, Brooklyn, N. Y. Filed May 21, 1920. Serial No. 383,315. 2 Claims. (Cl. 75—1.)



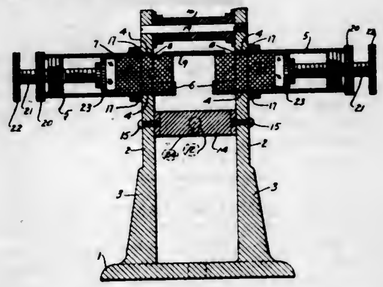
1. The process of protecting Babbitt metal from oxidation while being melted, which consists in coating the Babbitt metal, prior to melting the same, with a thin film of another metal which is without injurious action on the bearing qualities of the Babbitt metal and which has a melting point that is substantially higher than that of the Babbitt metal.

1,351,405. WINDING MECHANISM FOR SPRING-MOTORS. JOHN J. SCULLY, Bridgeport, Conn., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed July 29, 1918. Serial No. 247,282. 3 Claims. (Cl. 74—33.)



1. In combination, a spring motor having a winding arbor, a sleeve telescoped over said arbor and secured thereto, a wall spaced from said arbor and having an opening therein, a winding shaft projecting through said opening, and a funnel-shaped member carried by said sleeve and facing said opening.

1,351,406. RIM CONTRACTOR OR EXPANDER. JOHN W. SHUTE, Bishop, Calif. Filed Nov. 27, 1918. Serial No. 264,407. 1 Claim. (Cl. 157—1.)

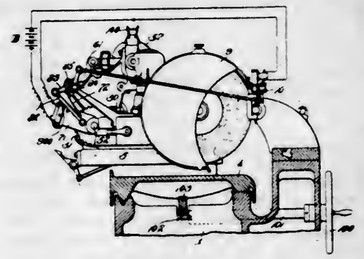


In a device of the character described, comprising clamping jaws adapted to engage the adjacent ends of a demountable rim, said clamping jaws being provided with transversely disposed bolts, one of said bolts being provided with a pivoted toothed plate extending toward the adjacent end of the demountable rim, the other clamping jaws being provided with a transversely disposed pin, a bail pivoted to the last named clamping jaws and overlying the pivoted toothed plate, and a second bail pivoted to the last mentioned jaws and overlying the toothed plate at a point beyond the overlying portion of the first mentioned pivoted bail.

1,351,407. INSECT-DESTROYER. DANIEL DARLEY SMITH, Valdosta, Ga. Filed Dec. 16, 1919. Serial No. 345,270. 5 Claims. (Cl. 43—144.)

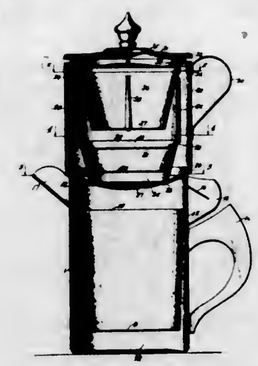
1. In an insect destroyer, the combination with a frame, of a pair of rollers in axial alinement with each other and rotatably mounted, said rollers being adapted to be moved over the ground between the rows of plants, a series of burners located within and without the rollers, said burners within the rollers projecting a flame against the inner periphery of the rollers at points diametrically opposite to the point of contact of the flame with the rollers located outside of the rollers and means for supplying fuel to the burners.

1,351,408. MACHINE FOR APPLYING EMOLLIENT TO MOTION-PICTURE FILMS. PAUL WERNER, St. Louis, Mo., assignor to Werner Film-Protector Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1919. Serial No. 315,242. 17 Claims. (Cl. 91—36.)



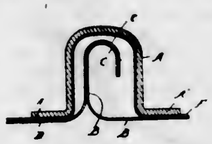
8. In a machine of the character described, a frame, a tube supported by the said frame and fastened thereto, an emollient contained within the said tube, and a bayonet clasp for attaching the said tube to the said frame.

14. A film-softening machine including material-holding tubes formed with end openings including a portion of the side and end of said tube.



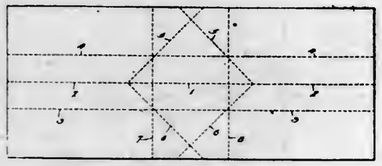
1,351,409. GRINDING-MACHINE. PHILIP S. ARNOLD, Highland Park, Mich., assignor of one-fifth to Charles E. Wisner, Detroit, Mich. Filed Apr. 16, 1917. Serial No. 162,278. 15 Claims. (Cl. 51—4.)

1. In a grinding machine, means for grinding a piece of work to reduce the diameter thereof, electrically controlled means adapted to cause cessation of the grinding operation, and a calipering device having parts riding in yieldable contact with diametrically opposite sides of the



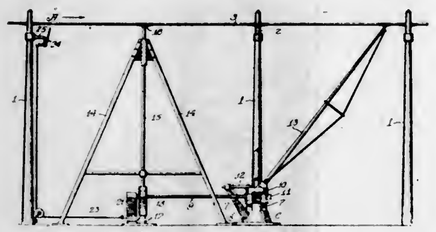
work adapted to close the circuit for said electrically controlled means upon attaining a predetermined distance apart.

1,351,410. COFFEE-POT. WILLIAM H. BRUNING, Evansville, Ind. Filed May 31, 1918. Serial No. 237,451. 12 Claims. (Cl. 53—3.)



1. In a coffee pot, a dripper adapted to be superposed on a coffee pot, said dripper having spaced concentric walls forming an air space, the outer wall having an external shoulder, and the inner wall having a reduced lower portion provided with a removable filtering screen at its bottom and a coffee receptacle having a sieve bottom and arranged in the inner wall with its bottom above the filtering screen thereof.

1,351,411. CAR-ROOF. RICHARD WEBB BURNETT, Albany, N. Y. Filed Feb. 9, 1918. Serial No. 216,177. 7 Claims. (Cl. 108—5.)

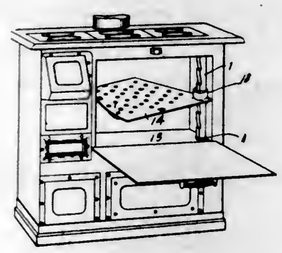


1. In a car roof, the combination with an inverted channel-shaped member, of load sustaining roofing sheets supported at spaced points and arranged beneath said inverted channel-shaped member and having upstanding flanges adjacent to each other, the upper portions of said flanges being return-bent in the same direction, nested and secured to each other at approximately the free edges.

1,351,412. COLLAPSIBLE PAPER CUP. PAUL H. CARR, Washington, D. C. Filed July 11, 1919. Serial No. 310,229. 4 Claims. (Cl. 229—53.)

1. A collapsible drinking-cup made from a rectangular blank which is neither cut nor notched, but which has three longitudinal scores extending more or less centrally thereof and throughout its entire length, two transverse scores, and four diagonal scores at the center having the form of a square set diagonally with respect to the blank, the central score between the square and the end of the blank forming an out-fold, and the same central score within the square an infold when the cup is collapsed, and the edges of the blank overlapped and secured together to form the body of the cup.

1,351,413. AUTOMATIC DELIVERY SYSTEM. ELZA T. S. CLIFFE, Mansfield, Ohio. Filed Jan. 10, 1919. Serial No. 270,456. 4 Claims. (Cl. 104—88.)

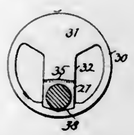


1. In a delivery system, the combination of an overhead track, a flexible switch section, means below said track adapted for flexing said switch section, cars suspended from said track, motive power for said cars, and means movable with said car adapted to actuate said switch flexing means.

1,351,414. SHOE. CHARLES P. COSCIA, Pittsburgh, Pa. Filed Dec. 20, 1919. Serial No. 346,365. 5 Claims. (Cl. 36—1.)

1. As a new article of manufacture a unitary front half of a shoe comprising a vamp, a welt, an in-sole and an outer-sole, said in-sole secured to said vamp and projecting rearwardly therefrom, said vamp, welt and outer-sole secured together and said welt and outer-sole projecting rearwardly from said vamp, said rearwardly projecting portion of the in-sole disconnected from the rearwardly extending portion of the welt, and said rearwardly extending portion of the welt disconnected from the rearwardly extending portion of the outer-sole.

1,351,415. OVEN-SHELF. JOHN W. COUMERILH, Mullan, Idaho. Filed May 28, 1919. Serial No. 300,275. 1 Claim. (Cl. 126—337.)

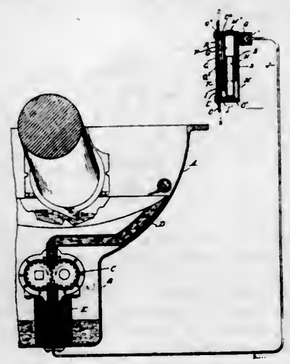


The combination with an oven having upper and lower plates, of a post fashioned on one side with spaced shoulders and inclined faces, a non-rotatable shelf on the post formed with a supporting thimble adapted to co-act with the inclined faces on the post and rest on a shoulder, alined bearing rings secured in said plates, bearing pins on the post operative in said rings, and one of said pins having spring connection with the post for the purpose specified.

1,351,416. FUSE FOR PROJECTILES. JOHN W. DARLEY, Jr., Baltimore, Md. Filed May 12, 1915. Serial No. 27,616. 16 Claims. (Cl. 102—39.)

15. The combination with a projectile revolving on an axis at right angles to the trajectory, of an explosive charge contained in said projectile, and a fuse comprising a detonating cap and means for firing said cap when the speed of rotation of said projectile diminishes below a predetermined speed.

1,351,417. COUNTERBALANCED CRANK-SHAFT. CHARLES C. DODGE, Cleveland, Ohio, assignor to The Park Drop Forge Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1918. Serial No. 233,482. Renewed Nov. 24, 1919. Serial No. 340,306. 5 Claims. (Cl. 74—5.)



1. The combination with a crank shaft, of a counterbalancing ring applied to an offcenter part of said crank shaft in such position that the axis of the ring shall be coincident with the axis of the shaft,—said ring having an integral counterweighting arm which extends from one side of the ring toward the axis thereof, the end of said arm being in engagement with an offcenter part of the crank shaft, and the engaging surfaces of said arm and crank shaft being interlocked to prevent relative movement of the ring and shaft, and a portion only of the thin part of said ring being also in engagement with and being permanently secured to an adjacent part of the crank shaft.

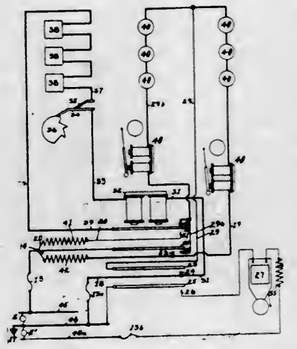
1,351,418. RIBBON OR TAPE NEEDLE. WALTER C. ELLSWORTH, New York, N. Y. Filed Nov. 21, 1919. Serial No. 339,770. 7 Claims. (Cl. 223—38.)

1. A ribbon or tape needle consisting of a pair of resilient blades secured together and provided with interengaging teeth being turned out of the planes of the blades to oppose each other and at one end of said needle, said teeth normally held in engagement with each other by the resiliency of said blades.

1,351,419. GAGE. JAMES ERSKINE, Flint, Mich. Filed Mar. 23, 1918. Serial No. 224,135. 11 Claims. (Cl. 116—117.)

7. A gage, comprising a casing, a cylinder arranged within said casing and open at its lower end, a piston in said cylinder, an indicator connected to the lower end of said piston, a suction conduit connected with said cylinder for lifting said piston and indicator and a stop for normally arresting upward movement of said piston and indicator, yieldable upon abnormal suction to permit further upward movement of the indicator.

1,351,420. UNIVERSAL SHAFT-COUPLING. HARRY R. GEER, Johnstown, Pa. Filed Dec. 10, 1919. Serial No. 343,699. 5 Claims. (Cl. 64—91.)

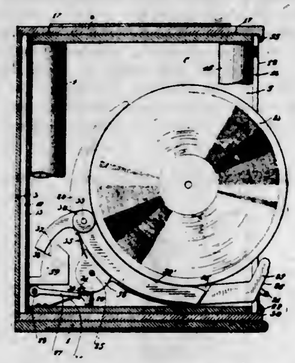


1. In a universal shaft coupling, a shaft, a coupling head thereon provided with a transverse cylindrical recess, opposed slippers, each provided with a substantially plane face and an opposite face of convex cylindrical form adapted to slidably engage the interior surface of said recess, a second shaft provided with a flattened end adapted to slidably and pivotally engage said slippers between the plane faces thereof, a flanged cylindrical coupling sleeve secured to said coupling head thereby retaining the parts of the coupling, notches in the flange of said coupling sleeve, and keepers spanning said notches whereby said flange is adapted to retain lubricant.

1,351,421. BOWLING-PIN. EPHRAIM P. GRIGNON, Appleton, Wis. Filed Oct. 8, 1919. Serial No. 329,289. 9 Claims. (Cl. 46—4.)

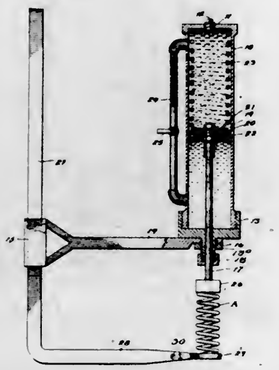
1. As an article of manufacture, a solid bowling pin consisting of a plurality of substantially V-shaped segments secured together to form a unitary structure, the apex of said segments being on a straight perpendicular line.

1,351,422. ELECTRIC SIGNALING SYSTEM. SIMON B. HESS, Jamaica, N. Y. Filed Sept. 19, 1916. Serial No. 121,036. 14 Claims. (Cl. 177—360.)



14. An electric signaling system comprising a normally grounded source of energy, a bell loop, a resistance, a station loop, an electromagnet therein, a trouble signal, and means controlled by said magnet for connecting said loops and said resistance in series with each other and to the source of energy and upon the occurrence of a break or a ground in the station loop, a ground in the bell loop or a break in the bell loop for actuating said trouble signal to produce different trouble indications and upon de-energization of said magnet for short-circuiting said resistance and for connecting said loops in parallel with each other and to the source of energy and actuating said trouble signal.

1,351,423. FILING-CABINET WITH LOCKING-COMPARTMENTS. MILLER REESE HUTCHISON, West Orange, N. J., assignor to Miller Reese Hutchison, Inc., a Corporation of New Jersey. Filed June 17, 1919. Serial No. 304,788. 24 Claims. (Cl. 211—16.)



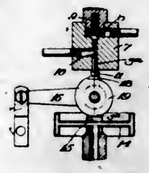
1. In a filing cabinet for phonograph records, in combination, a plurality of compartments each adapted to have a record locked therein, means for simultaneously

unlocking a plurality of said records, and means for permitting removal of but one of said unlocked records.

2. In a filing cabinet for phonograph records, in combination, a plurality of compartments each adapted to have a record locked therein, means for simultaneously unlocking all said records, and means for permitting access to any one selected compartment for record removal, while maintaining the remaining compartments inaccessible.

1,351,424. VALVE-SPRING COMPRESSOR. FRANK E. JENKINS, Medford, Oreg. Filed July 17, 1919. Serial No. 311,480. 4 Claims. (Cl. 29—87.1)

3. A device of the character described comprising a liquid containing cylinder provided with a valve controlled by-pass communicating with the ends thereof, a spring pressed plunger slidable within said cylinder and provided with check valves, a plunger rod connected with said plunger and projecting beyond one end of said cylinder, and a rod slidable with respect to said cylinder and having a portion cooperating with the projecting end of said plunger rod whereby both ends of a spring to be compressed may be engaged.

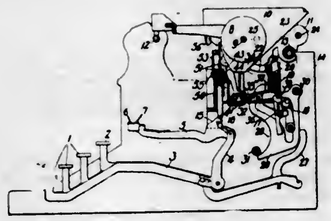


1,351,425. PNEUMATIC SHOVEL. ALONZO W. KANEY, Chicago, Ill., assignor of one-third to Robert E. L. Janney, Chicago, Ill. Filed Dec. 21, 1917. Serial No. 208,203. 2 Claims. (Cl. 294—49.)

1. A pneumatic shovel comprising a blade, a shank for said blade, a power driven pneumatic hammer mounted on the upper end of the shank in alinement therewith and having impact means to engage the end of the shank, and a grip on the upper end of the hammer, said shank, hammer and grip constituting the handle of the shovel.

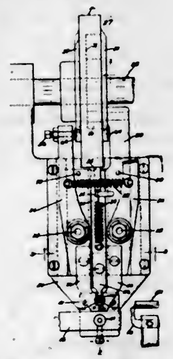
2. A pneumatic shovel comprising a blade, a shank for said blade, a pneumatic hammer mounted on the upper end of the shank and comprising power driven impact means to engage the end of the shank, a grip on the upper end of the hammer, and a stirrup secured to the hammer and arranged in adjacent relation to the blade.

1,351,426. VALVE MECHANISM. GEORGE KARST, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Aug. 9, 1916. Serial No. 113,897. 3 Claims. (Cl. 236—86.)



1. In a valve mechanism, the combination with a main valve, of a fluid pressure supply controlling the main valve, a pipe for said fluid pressure, a secondary valve governing the fluid pressure within said pipe provided with a valve stem, an operating diaphragm for the secondary valve having its central portion substantially in alinement with said valve stem, and an operative connection between said diaphragm and valve stem comprising a pivotally mounted arm having thereon a fixed part and an adjustable part, one of said parts engaging said valve stem and the other said diaphragm.

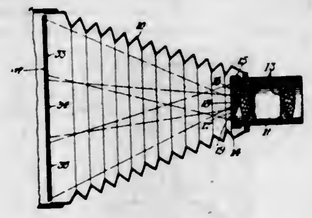
1,351,427. HAIR-DRESSING ATTACHMENT. VERONIKA KRASMAUSKIS, Chicago, Ill. Filed Mar. 1, 1920. Serial No. 362,225. 1 Claim. (Cl. 132—23.)



A hair dressing attachment comprising hair switches, a wire extending from the end of each switch, and clasp members at the ends of said wires for securing them together, the wires when secured together forming a support across the head for said switches to hold in place on the head side puffs or other hair dressing forms made up from the switches.

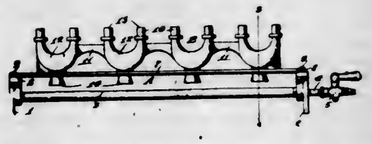
1,351,428. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1919. Serial No. 271,568. 19 Claims. (Cl. 197—187.)

1. In a typewriting machine, the combination with a platen carriage shiftable between upper and lower-case positions, and a supporting roller on said carriage, of a key-actuated shift frame, a rail on which said roller rests, rail-carrying arms pivoted on said shift frame and provided with slots, and fixed pins projecting into said slots.



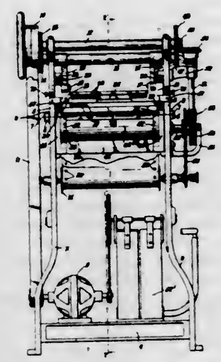
1,351,429. MECHANISM FOR FORMING AND ASSEMBLING SNAP-FASTENER SPRINGS. ARTHUR J. LEWIS, Stratford, Conn., assignor to The Baird Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 5, 1916. Serial No. 113,358. 28 Claims. (Cl. 79—3.)

1. Mechanism for forming and assembling springs comprising a form, jaws, means for causing the jaws to first move relatively to the form to bend a blank of wire over the form, and then close and clasp the blank about the form, a forming punch which completes the formation of the spring, means for moving the jaws carrying the completed spring to the assembling position, a holder for carrying spring receiving articles to the assembling position, and an assembling punch whereby springs are removed from the jaws and assembled in articles in the holder.



1,351,430. MULTIPLE-IMAGE PHOTOGRAPHY. NAHUM E. LUBOSHEY, Harrow, England. Filed Dec. 22, 1916. Serial No. 138,462. 5 Claims. (Cl. 88—1.)

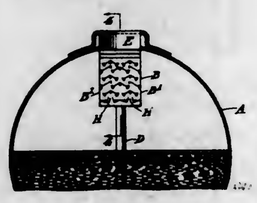
1. A camera having a single objective and a light refracting prism presenting two intersecting faces at equal and opposite angles to the axis of the objective and each partly covering the light aperture of the objective and at



the same side of a chord of said aperture, the portion at the opposite side of the chord being uncovered.

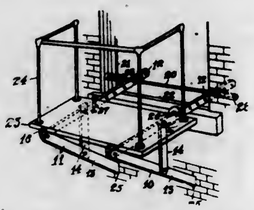
1,351,431. GAS-BURNER. JOHN T. MASTERSON, Huntington, W. Va. Filed July 10, 1919. Serial No. 309,820. 1 Claim. (Cl. 158—106.)

A gas burner comprising a longitudinally extending pipe member having longitudinally spaced port openings formed therein, a valved inlet connection disposed at one end of said member and the opposite end of said member being substantially closed, a burner structure mounted above said pipe member, said structure comprising a series of substantially U shaped outlets having enlarged central portions and relatively reduced outlet portions, and a plurality of projections depending from said burner structure, said projections being provided with a plurality of substantially funnel shaped ports, the latter having their lower extremities disposed immediately above and in registration with said member ports, and the upper restricted ends of said projecting ports terminating within the centrally enlarged portions of said outlets.



1,351,432. MUSIC-RECORDER. PHILIP J. MEADE, Summit, N. J. Filed Mar. 27, 1919. Serial No. 285,496. 8 Claims. (Cl. 164—113.)

1. In a music recorder, the combination of a plurality of levers, punches pivotally connected with said levers to extend at an angle thereto, means constituting fulcrums for said levers, guides for said punches, means arranged



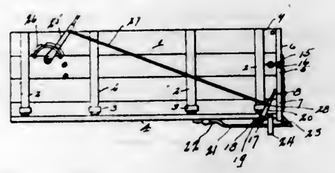
to constantly oscillate said levers about their fulcrums, said means having loose connections with said levers at points distant from said fulcrums permitting the levers to have endwise play in respect to said means, and means for shifting any desired one of said levers when a note is to be recorded.

1,351,433. STEAM-SEPARATOR. JOSEPH J. NELIS, Brooklyn, N. Y. Filed Dec. 31, 1919. Serial No. 348,614. 7 Claims. (Cl. 183—75.)

1. A steam separator consisting of a chamber adapted to be secured in the steam space of a boiler and having openings for the admission of steam at its bottom and an opening for the delivery of steam at its top, in combination with a system of staggered baffle plates extending from end to end of the chamber and formed with water collecting gutters along their edges which gutters extend through an end wall of the chamber, a closed chamber into which said gutters communicate and a drain pipe leading from said chamber to a point below the water level of the boiler.

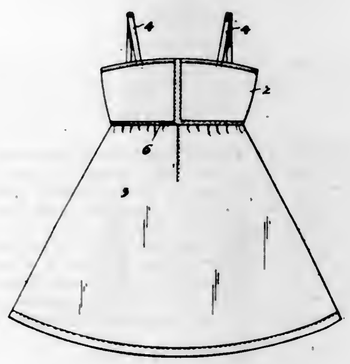
351,434. WINDOW-PLATFORM. DAN NEWTON, Jamestown, N. Y., assignor of one-half to Charles E. Brink, Jamestown, N. Y. Filed Mar. 29, 1920. Serial No. 369,794. 1 Claim. (Cl. 304—27.)

A window platform including a pair of independent and freely adjustable bars each formed to abut the respective sides of the window frame and having a series of openings in their inner end portions and having their outer ends enlarged and extending upwardly to form stop shoulders, braces for the bars connected thereto and formed to engage the wall, a platform member seated on the tops of the bars, and engaged at the front side thereof with the stop shoulders, a transverse rod passed through two of the openings and engageable with the window frame, and bodily removable clamps arranged along the sides of the bars and having parts engaged with the top face of the platform member and parts adjustably engageable with the under sides of the bars, the clamps being disposed between the inner side edge of the platform member and the window and acting to hold the platform member down onto the tops of the bars and adjustably against the stop shoulders.



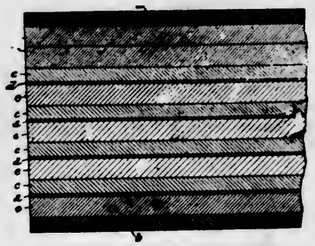
1,351,435. JOINT FOR USE IN CORRUGATED-METAL CONSTRUCTION. PETER NORMAN NISSEN, London, England. Filed Dec. 6, 1917. Serial No. 205,861. 2 Claims. (Cl. 189—2.)

1. A device for joining sheets of corrugated material, comprising a pair of strips of material, each of said strips being corrugated similarly to the corrugations of the sheets to be joined, and means for securing said strips



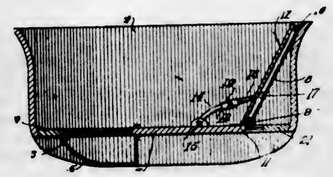
together on opposite sides of the sheets to be joined, whereby said strips are caused to contact with said sheets, throughout the length and breadth of said strips.

1,351,436. END-GATE. HANS P. OLSEN, Spokane, Wash. Filed Mar. 15, 1919. Serial No. 282,908. 1 Claim. (Cl. 296—55.)



The combination with a vehicle body, of an end gate having a detachable top section and a horizontally hinged lower section a spring latch on the body to retain the hinged section, a shaft journaled beneath the body having a cam member engaging the latch to depress it, a rear lever arm on said shaft, a front lever, and a connecting rod between said lever arm and lever, for the purpose described.

1,351,437. BRASSIÈRE AND CHEMISE. RUTH BLOCH OPPENHEIMER, New Rochelle, N. Y. Filed Sept. 27, 1919. Serial No. 326,857. 1 Claim. (Cl. 2—145.)



A combined under garment which consists of a brassière with arm straps, a back opening and a bottom seam and a chemise secured to said brassière by said seam.

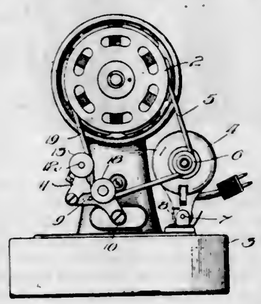
1,351,438. COMPOSITE CAP OR CLOSURE. HERBERT DODGE PEASE, Richmond Hill, and Wallace Patten Cohoe, Riverdale, N. Y., assignors to The Sanseal Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1917. Serial No. 187,747. 12 Claims. (Cl. 154—45.5.)

1. A cap or closure for bottles and other receptacles, comprising as an element of structure a layer made up of a preponderating bulk of resinous compound and mineral filler associated with a reinforcement of fiber; substantially as described.

1,351,439. BABY-CARRIAGE. HARRY PERLMUTTER, Brooklyn, N. Y. Filed Nov. 20, 1918. Serial No. 263,424. 5 Claims. (Cl. 296—63.)

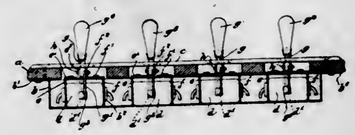
1. A carriage body having a sliding seat with a drop-back hinged thereto, and link connections between the drop-back and fixed portions of the carriage body, the latter being forward of the hinged connection and between the back and seat, all of the parts being within the carriage body.

1,351,440. SAW AND METHOD AND MEANS OF HARDENING THE SAME. REINHART W. PITTMAN, New York, N. Y., assignor, by mesne assignments, to Henry C. Pittman, Hackensack, N. J. Filed Nov. 30, 1917. Serial No. 204,482. 7 Claims. (Cl. 148—13.)



1. The improved method of tempering the teeth of a plurality of saw blades simultaneously, which consists in arranging a plurality of blades in juxtaposed relation with the back edge of one blade alternating with a tooth portion of adjacent blades with the toothed zone of the blades projecting beyond the back edge of adjacent blades to expose the whole surface of the toothed zone of the blades, and then heat treating and cooling the blades while in such assembled position.

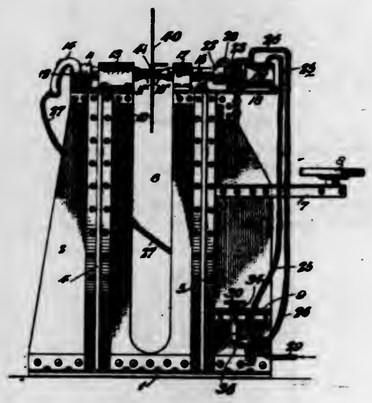
1,351,441. ABSORBENT-BANDAGE PACKAGE. EDMUND MORSE POND, Rutland, Vt. Filed Jan. 3, 1919. Serial No. 269,469. 11 Claims. (Cl. 206—63.2.)



1. An absorbent bandage package which comprises in combination a cylindrical container, a central tube, a bandage wrapped in spiral form about said tube, and means for distributing liquid radially from the lower end of the tube along the bottom of the container in contact with the lower edge of the rolled bandage.

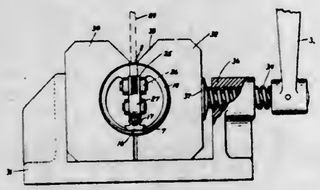
1,351,442. BOBBIN-WINDER FOR MOTOR-DRIVEN SEWING-MACHINES. GEORGE H. RIDDELL, Buffalo, N. Y., assignor to Domestic Sewing Machine Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,619. 3 Claims. (Cl. 242—20.)

1. The combination with a sewing machine head, of a motor arranged behind the head, a driving belt between the motor and the head, a bobbin winder arranged at the front of the head and having a winder pulley, and a guide associated with said bobbin winder and engaging with said belt to deflect the latter into engagement with said winder pulley when the latter is in its winding position.



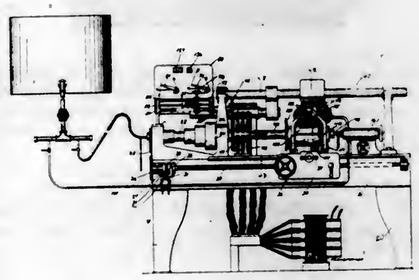
1,351,443. CONTROL-SWITCH FOR CINEMATOGRAPHIC TARGETS. WILLIAM P. ROBERTSON, New York, N. Y., assignor to Lydia B. Koch, New York, N. Y. Filed June 7, 1919. Serial No. 302,530. 5 Claims. (Cl. 247—13.)

1. A switch control for cinematographic targets embodying therein a housing containing a plurality of independent



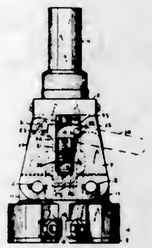
switch mechanisms each embodying therein a casing and a slidable switch actuating member mounted therein and projecting through opposite sides thereof, forked retaining members straddling said casings respectively and detachably connected with said housing, and forked actuating levers pivotally mounted between said forked members repsectively with the arms thereof arranged on opposite sides of each of said casings in the operative relation to the switch actuating member carried thereby, whereby each of said casings is firmly held in relation to said housing and any of said casings may be removed from said housing independently of the others.

1,351,444. DOUBLE-RIVETING MACHINE. WILLIAM LINDSAY SIMPSON, San Francisco, Calif., assignor to Bethlehem Shipbuilding Corporation, Ltd., Bethlehem, Pa., a Corporation of Delaware. Filed Dec. 31, 1918. Serial No. 269,084. 26 Claims. (Cl. 78—52.)



26. In a double riveter, a stationary riveter, means for supporting it in fixed position, an adjustable riveter in alinement with said stationary riveter, means for supporting said adjustable riveter and for guiding it in its movements, a fluid supply to said riveter, controlling means for said fluid supply for actuating said adjustable riveter toward or away from said fixed riveter and a separate controlling means for simultaneously admitting motive fluid to both riveters for actuating them in unison.

1,351,445. MEANS FOR HOLDING FORMED METAL PIECES WHILE THEY ARE BEING ELECTRICALLY WELDED. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,282. 7 Claims. (Cl. 219—6.)

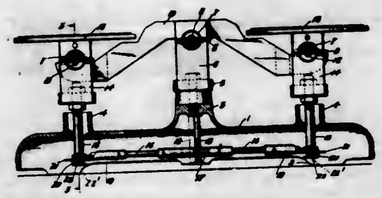


1. A means for holding formed metal pieces while being electrically welded, including an expansible and contractible mandrel, which in its expanded position assumes the exact desired internal size and shape of the finished shell, and suitable jaws movable relatively to each other for engaging the exterior of the shell while welding, said jaws being designed to assume at their bearing surface the exact desired internal size and shape of the finished finished shell, the arbor in its contracted position and the jaws in their removed position permitting easy insertion and removal of the formed metal piece before or after welding.

1,351,446. COMBINATION WELDING-MACHINE. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,292. 52 Claims. (Cl. 219—4.)

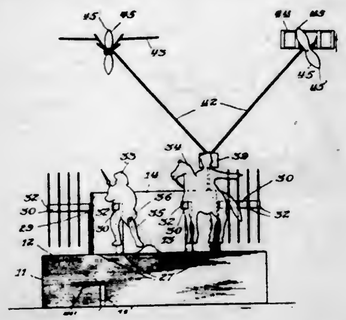
1. A machine of the kind described, comprising a rotating arbor constituting one electrode and a coöperating wheel electrode mounted to engage the work on the arbor, hand and power-operated means, optionally operable, to cause a relative advance of the wheel electrode longitudinally of the arbor to a variably predetermined point and for making and breaking the welded circuit at variably predetermined moments.

1,351,447. SELF-OPENING DIE. OTTO A. SORENSEN, New York, N. Y. Filed Oct. 16, 1918. Serial No. 258,356. 7 Claims. (Cl. 10—98.)



1. A self-opening die comprising a supporting head, cooperating jaws pivoted in said head, cutters carried by said jaws, a stud rigidly secured to the head and centrally projecting therefrom between the rear ends of the pivoted jaws, a jaw closer slidingly mounted on the stud in position to be tripped by the work to release the jaws, and means for sliding said jaw closer in reverse direction to close the jaws.

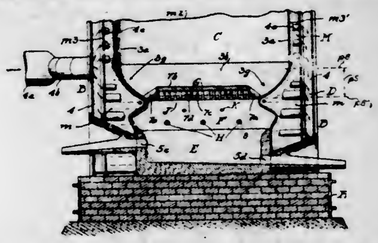
1,351,448. METHOD AND APPARATUS FOR WIRING COIL-SPRINGS. FREDERICK M. STEVENS, New York, N. Y., assignor to John Chatillon & Sons, a Corporation of New York. Filed Nov. 13, 1917. Serial No. 201,768. 13 Claims. (Cl. 140—93.)



1. The method which consists in tying the coils of a formed spring in contact with each other while holding the spring coils and tie against displacement with respect to each other and confining the spring in normal shape by a mandrel.

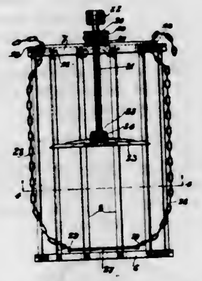
1,351,449. SCALE. FREDERICK M. STEVENS, New York, N. Y., assignor to John Chatillon & Sons, a Corporation of New York. Filed Feb. 2, 1916, Serial No. 75,630. Renewed Feb. 18, 1920. Serial No. 359,538. 7 Claims. (Cl. 265—54.)

1. In a scale, a frame, a bushing rotatably mounted therein, and a knife edge support within said bushing.



1,351,450. TOY. JAROSLAV STRAKA, Chicago, Ill. Filed June 19, 1919. Serial No. 305,342. 15 Claims. (Cl. 46—40.)

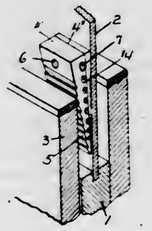
1. In a toy comprising a frame, a movable element carried thereby, a figure mounted on said movable element and having a relatively movable member, and means carried by said frame and located in the path of said member whereby as said figure is set in motion by said movable element said member will be moved with respect to said figure.



1,351,451. SMELTING-FURNACE. RANDOLPH G. WARD, New York, N. Y., and WILLIAM R. WARD, Bethlehem, Pa., assignors, by direct and mesne assignments, to Independent Mines Smelting Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 4, 1916. Serial No. 123,612. 26 Claims. (Cl. 263—27.)

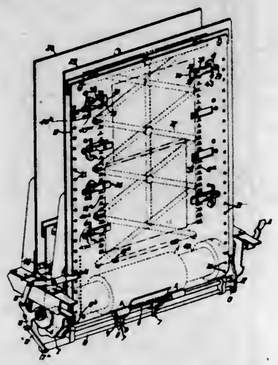
1. In a smelting furnace of the character described, the combination of a horizontally elongated charge chamber having the lower part of their walls downwardly and inwardly curved to form a furnace-hearth provided with a central elongated hearth opening having a width greater than its vertical depth; and oppositely disposed upwardly

and inwardly pointing coacting burners arranged under said hearth and disposed in opposed pairs and adapted to combine their flames at a point just beneath said opening and to project the concentrated flames up through said hearth opening to points considerably above the opening.



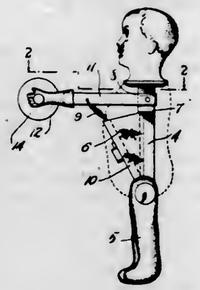
1,351,452. BALER. WILLIAM A. WEBSTER, Galesburg, Ill. Filed July 26, 1916. Serial No. 111,342. 5 Claims. (Cl. 100—8.)

1. A container for balers comprising an open work bottom member substantially circular in form and formed in two separable parts, there being a hook and lug connection between said parts; a top substantially circular ring formed in two separable parts; there being a hook and lug connection between said parts; and substantially vertical slats connecting corresponding parts of said bottom member and said top ring, substantially as described.



3. A baler comprising a container consisting of upper and lower members and slats connecting the same, the upper member being provided with bale tie receiving apertures, and means to compress the contents of the container, substantially as described.

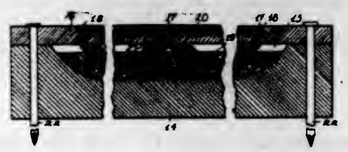
1,351,453. ANTIRATTLING DEVICE. GEORGE A. WELLS, Jr., New York, N. Y. Filed Dec. 23, 1919. Serial No. 346,816. 4 Claims. (Cl. 292—343.)



1. An anti-rattling device composed of a wedge-shaped soft rubber face portion and a hard rubber backing therefor integral therewith.

1,351,454. TYPEWRITING-MACHINE. JOHN A. WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 1, 1917. Serial No. 204,968. 31 Claims. (Cl. 197—126.)

1. The combination with a platen having a curved surface, of a flexible collating member passing around said platen, and a plurality of securing devices for holding work-sheets on said collating member having a movement relative to said collating member and to each other, so as to allow for the bending and straightening action of said collating member and said work-sheets in passing to and from the platen and around the platen.

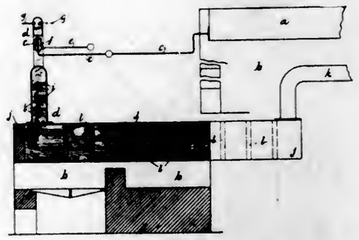


1,351,455. TOY FIGURE. JOHN N. WHITEHOUSE, New York, N. Y., assignor to Elektra Toy & Novelty Co., New York, N. Y. Filed July 11, 1919. Serial No. 310,038. 2 Claims. (Cl. 46—40.)

1. A figure toy having a cruciform frame, a head carried on the upper stem portion of the frame, legs connected to the lower stem portion of the frame, a U-shaped strap of suitable resilient material secured to the cross bar of the frame with the arms of said strap extending forwardly from the cross bar, cymbals secured to the ends of said arms and means connected to the frame and the arms for bringing the arms toward each other to actuate the cymbals.

1,351,456. POULTRY-ROOST. HENRY WINDAHL, New Sharon, Iowa, assignor of one-third to Andrew M. Evans, New Sharon, Iowa. Filed Sept. 25, 1918. Serial No. 255,725. 1 Claim. (Cl. 119—25.)

A poultry perch, comprising a perch bar formed with an upwardly opening channel extending throughout the major portion of its length, a top bar mounted on said perch bar and covering said channel, said top bar being formed with an upwardly opening groove throughout the major portion of its length, and formed with spaced holes forming communication between said groove and channel, means for securing the top bar to the perch bar, and a

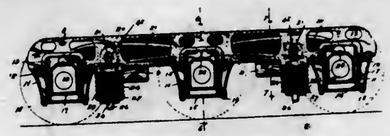


wick member lying in said groove, said wick member also being extended through the holes in said top bar into said channel.

1,351,457. EXTENSION-TABLE. FRIEDRICH WOHLMANN, Los Angeles, Calif. Filed Oct. 26, 1916, Serial No. 127,936. Renewed June 9, 1920. Serial No. 387,722. 8 Claims. (Cl. 45—113.)

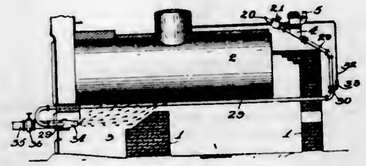
7. In an extension table, the combination with a frame including a fixed top, of a carriage slidably mounted in said frame and adapted to be telescoped into the frame, said carriage having a leaf guideway, a leaf slidably mounted in said guideway, the underside of said carriage provided with an incline so positioned as to cause the carriage to move vertically after it has cleared said top as it is moved from the frame.

1,351,458. TREATMENT OF PETROLEUM AND LIKE OILS. EDWARD WILLIAMS WYNNE, Liverpool, England. Filed Aug. 28, 1918. Serial No. 251,716. 3 Claims. (Cl. 204—31.)



3. An apparatus for the treatment of petroleum and like oils comprising a spraying apparatus adapted to receive oils, means communicating with said spraying apparatus to cause ozonized oxygen to commingle with oil sprayed in said apparatus, electrodes in said spraying apparatus to subject the mixture emitted thereby to an electrical treatment, a still communicating with said spraying apparatus, and electrodes located in said still to subject the mixture to a further electrical treatment.

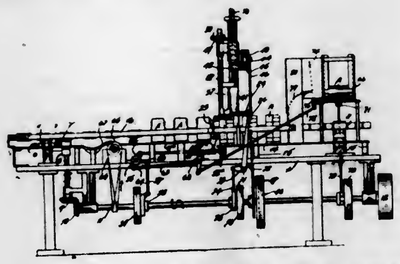
1,351,459. CAR-TRUCK. FRANKLIN L. BARBER and EDWIN W. WEBB, Chicago, Ill., assignors to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 24, 1919. Serial No. 278,619. 7 Claims. (Cl. 105—196.)



1. In a car truck, the combination with a frame having side members and a pair of transoms rigidly connecting

said side members, of a double bolster, lateral motion devices carried by the transoms and supporting the double

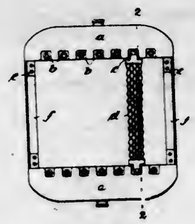
bolster with freedom for lateral movement entirely between the frame side members, and stops for limiting the lateral movement of the double bolster.



1,351,460. PULVERIZED-FUEL GAS-GENERATOR. NAPOLEON F. N. BEAUREGARD, Chicago, Ill. Filed May 21, 1917. Serial No. 169,942. 9 Claims. (Cl. 110—104.)

1. The process of burning fuel, which consists in mixing powdered fuel with air, then subjecting the mixture to an intense heat, then mixing an additional supply of air therewith, and thereafter introducing the mixture into a furnace chamber for combustion.

3. A fuel supply apparatus, comprising a conduit having an outlet at one end, means for supplying air thereto near its inlet end, supplemental air supply means at the outlet end thereof, means for heating a portion of said conduit intermediate its ends, and means for supplying pulverized fuel to said conduit intermediate its inlet end and its heated portion.



1,351,461. MEANS FOR OPENING RECEPTACLES OR CARTONS. CARL BECKMANN, New York, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1919. Serial No. 338,336. 14 Claims. (Cl. 93—36.)

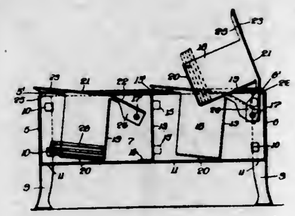
10. The combination of means to support receptacles having flaps, with means to deflect the flaps of said receptacles, and means to open said receptacles.

1,351,462. RADIATOR. JULIUS BEHR, Feuerbach-Stuttgart, Germany. Filed Apr. 24, 1915. Serial No. 23,733. Renewed Feb. 17, 1920. Serial No. 359,231. 2 Claims. (Cl. 257—130.)

1. In a radiator, the combination with a cooling element comprising an upper header, a lower header and a plurality of tubes having very thin walls opening into the same, of an upper end a lower header, an upper tubular member securely carried by and opening into one of the upper headers, the other of the upper headers having an annular member surrounding said tubular member, a lower tubular member securely carried by and opening into one of the lower headers, the other of the lower headers having an annular member surrounding the lower said tubular

member, and elastic packing rings locked between each tubular member and the adjacent annular member for forming chambers in the annular members, each chamber being in open communication with the adjacent tubular member and with the header carrying the respective annular member containing the chamber, said upper and said lower tubular member each constituting a tightening or bolting and a supporting member.

1,351,463. TIRE-CASING AND METHOD OF MAKING THE SAME. NEWTON BENJAMIN, Elmira, N. Y. Filed Jan. 26, 1918. Serial No. 213,895. 2 Claims. (Cl. 154—14.)



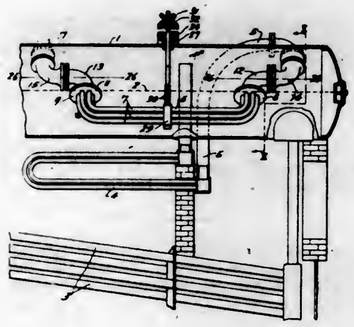
1. A tire armor or casing having embodied therein, a reinforcement comprising parallel wires and a braid comprising a plurality of cords wound spirally on said wires in a plurality of strands of said braid alternately in reverse directions, the convolutions of each strand of braid lying alongside of the adjacent convolutions, and each convolution being disposed between two other convolutions.

1,351,464. COMMODITY-CABINET. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1919. Serial No. 341,363. 5 Claims. (Cl. 211—7.)

1. A commodity cabinet of the character described, comprising a supporting frame having a wall extending between opposite sides thereof, and a plurality of commodity receptacles disposed side by side between said sides of the

frame, each of said receptacles having top, bottom, side and rear walls and a front opening lying behind said frame wall, said receptacles being hinged at their rear ends so as to tilt upwardly and thereby expose their front openings above said frame wall.

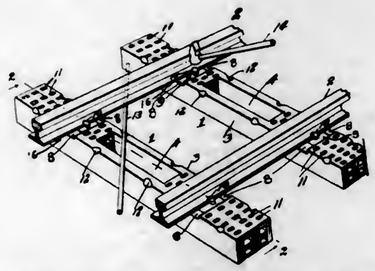
2. A commodity cabinet of the character described, comprising a supporting frame having a wall extending between opposite sides thereof, and a plurality of commodity receptacles disposed side by side between said sides of the frame, each of said receptacles having top, bottom, side and rear walls, and a front opening lying behind said frame wall, said receptacles being hinged at their rear ends so as to tilt upwardly and thereby expose their front openings above said frame wall, and a transverse ledge on said frame above and in rear of the hinges of said receptacles for limiting the extent of upward tilting movement of the latter.



3. A commodity cabinet of the character described, comprising a supporting frame having a wall extending between opposite sides thereof, and a plurality of commodity receptacles disposed side by side between said sides of the frame, each of said receptacles having top, bottom, side and rear walls and a front opening lying behind said frame wall, said receptacles being hinged at their rear ends so as to tilt upwardly and thereby expose their front openings above said frame wall, and the top walls of said receptacles being extended forwardly of their front openings and resting upon the upper edge of said frame wall.

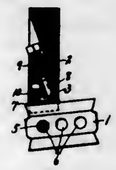
4. A commodity cabinet of the character described, comprising a rectangular supporting frame having substantially vertical front and side walls and corner legs, a hinge rod extending between said side walls parallel with said front wall, and a row of commodity receptacles pivoted at their rear ends on said hinge rod, each of said receptacles having an open front end lying behind the front wall of said supporting frame, and the top walls of said receptacles being extended forwardly of their open front ends and resting upon and overhanging the top edge of the front wall of said supporting frame, whereby each of said receptacles is normally held closed by gravity and may be tilted upwardly to expose its open front end.

5. A commodity cabinet of the character described, comprising a rectangular supporting frame having substantially vertical front and side walls and corner legs, a hinge rod extending between said side walls parallel with said front wall, and a row of commodity receptacles disposed side by side between said side walls, each of said receptacles having top, bottom, side and rear walls and an open front end lying behind the front wall of said supporting frame, and the top walls of said receptacles having downwardly inclined rear extensions pivoted on said hinge rod and forward extensions resting upon and overhanging the top edge of the front wall of said supporting frame.



1,351,465. APPARATUS FOR REGULATING THE TEMPERATURE OF SUPERHEATED STEAM. BENJAMIN BAOIDO, New York, N. Y., assignor to Locomotive Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 7, 1917. Serial No. 206,115. 4 Claims. (Cl. 122—479.)

1. In a regulator of the class described, the combination of a pair of elbows in alinement, two other elbows connected with the first pair by universal joints, two perforated plates connected to the ends of the second pair

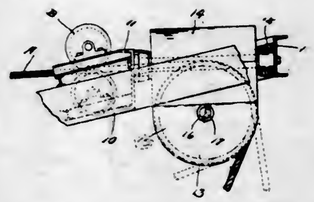


of elbows, and a set of curved tubes whose ends are secured in said plates.

1,351,466. CREEPLESS METALLIC TIE. LEONARD L. BROWN, Clifton Forge, Va., assignor of one-eighth to Robert E. Robinson and one-eighth to George I. Grasty, Clifton Forge, Va. Filed May 15, 1920. Serial No. 381,724. 5 Claims. (Cl. 238—30.)

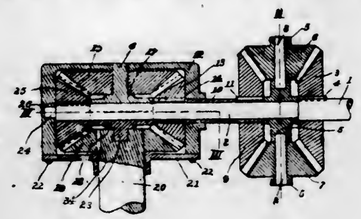
1. A tie of the class described, comprising a body having a free vertically-arranged central opening and with wood blocks between said central opening and its ends, crowbar receiving means formed upon the body, a replacing-device receiving or anchoring means formed upon the body.

1,351,467. CUTTING-TOOL. EDWARD I. CHAPIN and FRANK E. BAKER, Syracuse, N. Y., assignors to Chapin & Baker Manufacturing Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Mar. 12, 1919. Serial No. 282,169. 5 Claims. (Cl. 29—96.)



1. In a tool of the character described, a cutting blade having a series of apertures along its longitudinal center and its opposite lengthwise edges of the same cross-sectional form and parallel with the row of apertures, the end faces of said longitudinal edges being undercut beyond the corresponding end faces of the main body.

1,351,468. HARP. MELVILLE A. CLARK, Syracuse, N. Y. Filed Sept. 9, 1916. Serial No. 119,194. 9 Claims. (Cl. 84—14.)

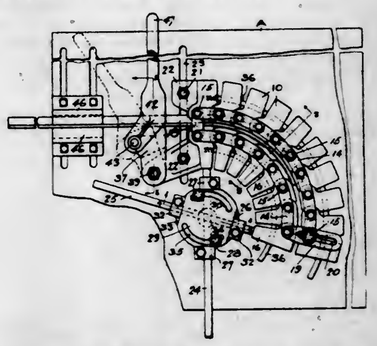


1. A harp having all of its strings attached to the neck at one and the same side thereof, in combination with movable frets, one for each string, mounted on the neck, and operating members for said frets at the opposite side of the neck.

1,351,469. BALANCED SHEAVE. THOMAS A. COLEMAN, Blytheville, Ark. Filed Sept. 11, 1919. Serial No. 323,133. 3 Claims. (Cl. 254—195.)

1. A balanced sheave comprising a pair of plates, a counterbalancing weight formed integral with and connecting the upper portions of said plates, integrally formed tubular trunnions on the ends of said weight, and a sheave journaled between said plates.

1,351,470. RIGHT-ANGLE POWER TRANSMISSION. ROBERT WILLIAM DAVIS, Hiltonia, N. J. Filed Mar. 17, 1919. Serial No. 283,141. 9 Claims. (Cl. 74—7.)

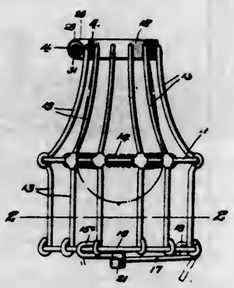


1. The combination with a driving shaft and a driven shaft arranged at right angles to one another, of a gear fast on the driven shaft, a hollow shaft mounted loosely around the driving shaft, a gear fast on the driving shaft and meshing with said gear on the driven shaft, a gear fast on the hollow shaft and also meshing with said gear on the driven shaft, and means for actuating said hollow shaft from the driving shaft.

1,351,471. WALL SYSTEM. WILLIAM H. DRABERS, Niles, Ohio. Filed Feb. 21, 1919. Serial No. 278,525. 6 Claims. (Cl. 72—30.)

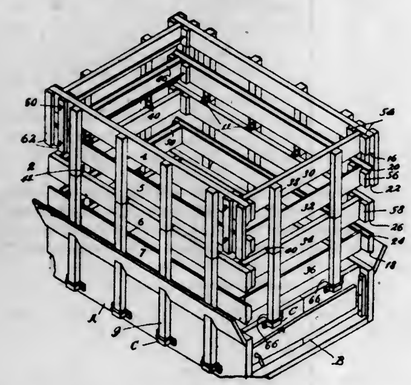
6. A wall comprising a plurality of blocks having beads and mating but shallower grooves on their adjacent faces and ends, said beads forming the side walls of a central and flanking channels, said channels being continuous and intercommunicating, having cementitious binder filling said central channel.

1,351,472. BENDING-MACHINE. JAMES FARMER, Pittsburgh, Pa., assignor of one-third to James E. Conway, Pittsburgh, Pa. Filed Sept. 12, 1919. Serial No. 323,338. 15 Claims. (Cl. 153—32.)



1. In a bending machine, the combination with a support, of a plurality of adjustably connected sets of bending dies, the dies in each set being flexibly connected one to another and means for feeding the work between the said sets of dies.

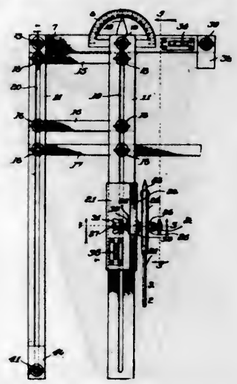
1,351,473. FISHING-ROD. FORSTER HARDY, South Ealing, England. Filed July 1, 1919. Serial No. 307,984. 6 Claims. (Cl. 43—18.)



1. A fishing rod having a handle secured to its butt end only and extending forwardly of said butt end, and an adjustable extension provided on said handle for increasing the effective length thereof.

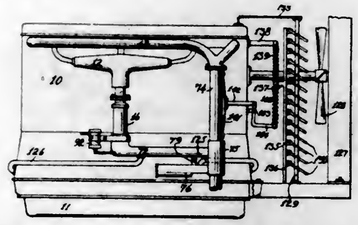
1,351,474. INCANDESCENT-LAMP GUARD. WALTER A. HEINRICH, St. Louis, Mo., assignor to W. N. Matthews and Brother, Inc., St. Louis, Mo., a Corporation of New Mexico. Filed Aug. 9, 1919. Serial No. 316,426. 1 Claim. (Cl. 240—102.)

In an incandescent lamp guard, a wire cage adapted to inclose the lamp body, members hinged to the lower portion of said cage and coöperating to form a closure for the bottom thereof, the inner ends of which members are adapted to overlap, key operated means removably seated in said overlapping ends, and a socket on the inner end of one of said members, which socket incloses a portion of the key operated means.



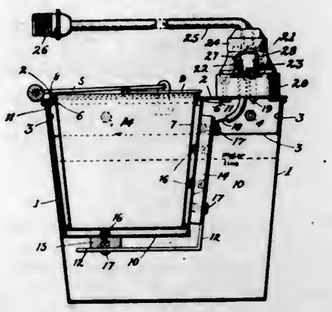
1,351,475. CONVERTIBLE VEHICLE-RACK. WILBUR J. HEMPY, Ottawa, Kans. Filed Jan. 9, 1919. Serial No. 270,282. 1 Claim. (Cl. 296—13.)

A convertible rack consisting of two oppositely-disposed sides the upper portions of which are hinged to fold downwardly, and an end-gate disposed at one end of said oppositely-disposed sides and consisting of stakes having upper and lower sections, hinges connecting said sections so that the upper sections may fold downwardly, slats secured to said stakes and spaced apart to form an open end-gate when the stakes are extended and a grain tight end-gate when said stakes are folded, in combination with a vehicle body having a tail-gate with notches in its upper portion registering with the stakes so that it can be opened and closed without disturbing the end-gate, and sockets on said tail-gate to receive the lower ends of the stakes, said sockets having open sides registering with the notches in the tail-gate.



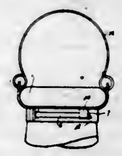
1,351,476. SCRIBING DEVICE. WALTER G. HILL, Chicago, Ill. Filed Sept. 15, 1919. Serial No. 323,899. 6 Claims. (Cl. 33—35.)

1. In a device of the character set forth, the combination of a member adapted to be positioned relative to the surface of an object to be marked, a slide moveable lengthwise of said member, a member pivoted on said slide on an axis extending crosswise of the direction of movement of said slide and adapted to rock on its pivot in the



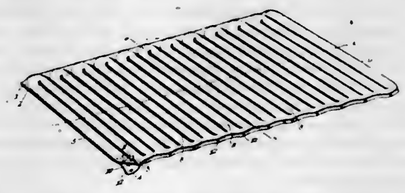
use of the device, and a marking device mounted on said second-named member and shiftable lengthwise thereon in the operation of the device.

1,351,477. AIR-CONTROL AND HEAT-REGULATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDWARD G. HODGES, Marshalltown, Iowa. Filed Mar. 15, 1919. Serial No. 282,954. 10 Claims. (Cl. 123—122.)



1. The combination of an internal combustion engine; a carbureting device; a shutter mechanism at the forward end of said engine; means for controlling the shutter mechanism according to the heat of the engine, said shutter mechanism being so mounted as to be effected by the pressure of the air against said shutter device.

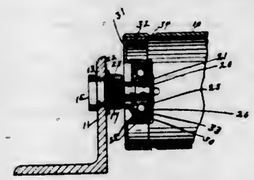
1,351,478. ELECTRIC GLUE-HEATER. HARRY KAIN, CON L. MILES, and GLENN A. WILKINSON, Wabash, Ind. Filed Jan. 8, 1920. Serial No. 350,139. 3 Claims. (Cl. 219—43.)



1. An electrically heated glue pot comprising a double boiler structure having an outer vessel and an inner vessel, a cover for said outer vessel containing an opening for the insertion of the inner vessel, a screen member supported from the said cover extending downwardly along the sides of the opening and under and across the bottom of the inner vessel, a plurality of electrodes extending along one side and the bottom of said screen mechanically supported thereby but electrically insulated therefrom, said electrodes extending vertically above a given level in the outer vessel and circuit connections for said electrodes entering said outer chamber through the cover and connecting with said electrodes at points above the said given level.

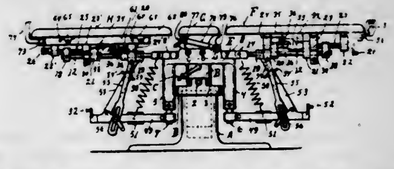
1,351,479. MILK-BOTTLE HANDLE. WILLIAM A. KRUTH, Minneapolis, Minn. Filed Feb. 2, 1920. Serial No. 355,799. 2 Claims. (Cl. 215—1.)

1. In a milk bottle handle the combination of a band having one end thereof formed into a tongue, an aperture in the other end of said band to form a guide for said tongue when passed therethrough, the portion of said band beyond said aperture being folded against itself and extending outwardly from said band, a latch formed from an ear extending from said band and positioned adjacent to said aperture and a latch formed at the extremity of said tongue to coöperate with said catch, said band being formed into a circular shape and adapted to be passed around the throat of a milk bottle and held in positive relation thereto by the coöperation of said latch and catch, and lifting means extending from said band.



1,351,480. PNEUMATIC OR COMPRESSED-AIR-CUSHION BED. RICHARD A. LEIGH, Denver, Colo., assignor to Edna Frances Leigh, Denver, Colo. Filed Oct. 2, 1919. Serial No. 328,020. 2 Claims. (Cl. 5—1.)

1. An air cushioning bed, comprising a pair of similar sized outside cover portions and air receiving and retaining rubber tubes secured between said cover portions, said outside covers having loose and free side edges, said side edges on their opposite sides being arranged to be attachably and detachably secured together, said portions being formed by securing said covers together at predetermined distances apart lengthwise of said covers, and said partitions extending transversely across said covers to within a few inches of the loose and free edges of said covers.

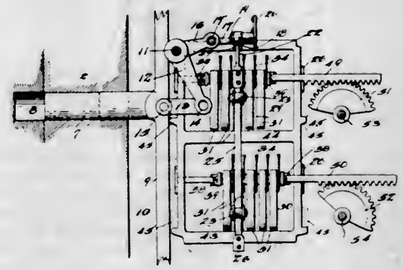


1,351,481. BEARING FOR CONVEYER-ROLLERS. CHARLES HENRY LISTER, North St. Paul, Minn. Filed Feb. 21, 1919. Serial No. 278,323. 4 Claims. (Cl. 64—36.)

1. In a bearing for conveyer rollers, a stud having a medial thread and a smooth inner end, forming a shoulder and a projecting bearing pintle, an annular raceway adapted to revolve freely upon said pintle and to fit against said shoulder, a peripheral groove in said race way, a two part annular ball cage adapted to retain

a series of balls in said groove, a series of anti-friction balls in said cage, and a tubular roller, provided with an end plug formed with axial cups adapted to fit freely over said cage and coöperate with said shoulder to hold said cage against lateral movement on the stud.

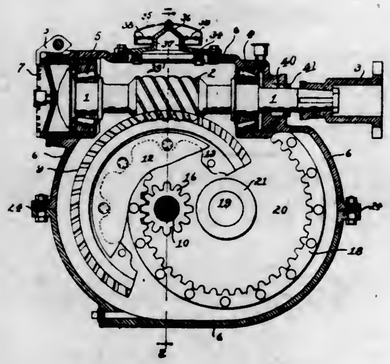
1,351,482. TREATMENT-TABLE. JOHN V. MCMANIS, Kirksville, Mo. Filed June 27, 1917. Serial No. 177,311. 25 Claims. (Cl. 128—74.)



1. A treatment table comprising a base, a pedestal vertically adjustable relative to said base, and a plurality of table top sections each pivotally and resiliently supported upon and relative to said pedestal.

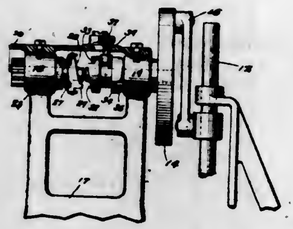
1,351,483. PROCESS FOR EXTRACTING OLEAGINOUS SUBSTANCES FROM OLEAGINOUS-SUBSTANCE-CONTAINING MATERIALS. JAMES MACGREGOR, Glasgow, Scotland, assignor to Herbert Austin, Fall River, Mass. Filed June 24, 1918. Serial No. 241,640. 3 Claims. (Cl. 87—6.)

1. A process for the extraction of oil, wax, rosins and the like from bone-charcoal, fullers' earth and like substances containing the same, consisting in mixing the said material with water to form a paste or emulsion and subsequently treating the said paste or emulsion with a solvent which separates the oil from the water and material.



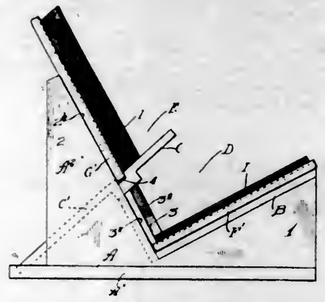
1,351,484. COMBINATION-LOCK. CLYDE LEE MANON, Fitzgerald, Ga. Filed Jan. 28, 1919. Serial No. 273,604. 3 Claims. (Cl. 70—18.)

1. The combination with a set of laterally movable revoluble latches and means for adjusting the latches to



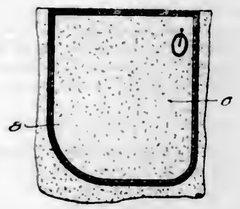
selected position, of a depressible bar adapted to engage a selected latch, a liftable keeper frame adapted to engage the selected latch, and means combined with locking mechanism for actuating said mechanism, the depressible bar and the keeper frame.

1,351,485. TRANSMISSION MECHANISM FOR TRACTORS. FRANK MOON, Oakland, Calif., assignor to Moon Tractor Co., San Francisco, Calif., a Corporation of California. Filed Oct. 29, 1919. Serial No. 334,304. 2 Claims. (Cl. 74—7.)



1. A transmission mechanism comprising a substantially cylindrical open-ended housing; a driving shaft positioned therein at right-angles to the axis of said housing; a worm mounted upon said driving shaft; a countershaft within said housing and positioned parallel with the axis thereof; a worm-wheel fixed upon said countershaft and adapted to mesh with said worm; a pinion fixed upon each end of said counter-shaft; an internal gear driven by each pinion; a driven shaft fixed to and extending outwardly from each internal gear; and a pair of end plates removably secured to said housing, said plates having tubular extensions for surrounding and supporting said driven shafts.

1,351,486. WASHING-MACHINE. NEVVENS N. NUNN, Maplewood, Mo., assignor to The Almetal Manufacturing Company, Maplewood, Mo., a Corporation of Missouri. Filed Dec. 23, 1918. Serial No. 267,966. 3 Claims. (Cl. 74—46.)



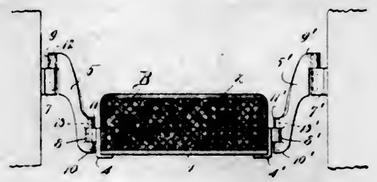
1. In a clutch of the class described, a pair of rotatably mounted alined shafts, clutch members mounted to rotate with and move lengthwise upon said shafts, a lever provided with locking pins for shifting one of said clutch members lengthwise upon its shaft and locking said member in position, yielding pressure means for resisting the movement of the other one of the clutch members away from the manually operable clutch member, and a bearing provided with a pin for engaging the first mentioned clutch member.

1,351,487. LOOSE-LEAF DEVICE. GEORGE H. POTWIN, Chicago, Ill., assignor to Accounting Devices Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1918. Serial No. 236,309. 11 Claims. (Cl. 45—57.)

1. A loose-leaf book-supporting rack comprising a lower platform, a back equipped with a guide-rib for slotted leaves and with a recess at the junction of said platform and back for accommodating a cover-section, and an upper platform having means associated therewith for supporting a book in rearwardly inclined position.

1,351,488. DOOR PANEL AND THE LIKE. JOSEPH REGENSTEIN, Chicago, Ill. Filed June 27, 1919. Serial No. 307,080. 2 Claims. (Cl. 154—43.)

1. As a new article of manufacture, a door panel or the like comprising a backing of paste-board and the like, having pasted to its exposed surface a facing of suitable material, and having pasted or glued to its back surface a facing of water-proof material, and a line of stitching extending around the periphery of the panel and through the backing and both facing materials and serving to firmly secure the facing materials to the backing and prevent the entrance of water into the edge of the panel, substantially as described.



1,351,489. RECOVERY OF THORIUM. LONNIE W. RYAN, Chicago, Ill., assignor to Lindsay Light Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1918. Serial No. 237,328. 10 Claims. (Cl. 23—13.)

2. In the recovery of thorium, the step which consists in precipitating a dissolved thorium salt from a solution as a metaphosphate.

1,351,490. FLOWER-BOX. CHARLOTTE REDDEN SANBORN, Somerville, Mass. Filed Feb. 24, 1919. Serial No. 278,642. 1 Claim. (Cl. 47—41.)

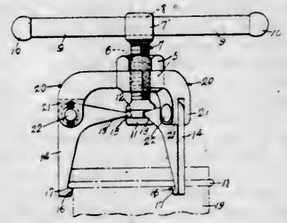
A device adapted to support flowers in various locations and positions comprising a flower box, L-shaped members adapted to hook under the opposite ends of the box, wall members adapted to be secured to a wall, and arms extending between said L-shaped members and said

wall members, said L-shaped members and said wall members having lateral lugs with vertical openings therein, said arms extending under the lugs in said L-shaped

members and over the lugs on said wall member, and pivot pins extending from the ends of said arms into said openings in the L-shaped and wall members respectively.

1,351,491. SPECTACLES. SAMUEL I. SCHWABACHER, Seattle, Wash. Filed May 20, 1919. Serial No. 298,355. 1 Claim. (Cl. 2—149.)

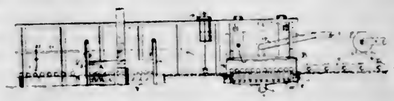
A device for protecting the eyes in viewing motion pictures, comprising vision frames for the eyes, the openings of said frames being bridged by bars arranged in parallelism and horizontal to the line of vision, each bar being within the plane of the frame and rounded on the side next the eye, the opposing side of the bar being flat, the rounded side of each bar being of dull color.



1,351,492. HERMETIC GLASS COVERING. JEAN CHARLES SÉAILLES, Paris, France, assignor to Societe Des Vitrages A. M. L. Société Anonyme, Paris, Seine, France, a Corporation of France. Filed Feb. 6, 1918. Serial No. 215,712. 1 Claim. (Cl. 108—10.)

A construction of the glass described, consisting of a pair of glass tiles having their ends overlapping, each of said tiles having at least two spaced ribs, the transverse spaces between the ribs being greater than the width of the ribs themselves and a filler of adhesive material disposed between at least one pair of said ribs and in which one of the ribs of the opposed tile is embedded, the faces of the tile being flat and smooth offering an unobstructed water shed for the lapped and overlapping tiles and a flat supporting underface for the overlapped tile.

1,351,493. ICE-CREAM-CAN TONGS. CHARLES A. SIGMOND, Freeport, N. Y. Filed Aug. 29, 1919. Serial No. 320,639. 3 Claims. (Cl. 294—106.)



1. Tongs including a body portion, right angled arms extending from the body portion, each of said arms having a depending portion, clamping jaws including right angled members, means for pivotally connecting the clamping jaws to the right angled arms, means on one end of each of the clamping jaws for coöperating with an ice cream can, an operating bar threaded to move through the body, a head on one end of the operating bar, means for connecting the head and one end of each of the clamping jaws whereby movement of the operating bar produces a relative movement of the clamping jaw.

2. Tongs including a body portion having a central threaded opening, arms formed integral with the body portion, clamping jaws pivotally connected to the arms, a threaded operating bar operating in the threaded opening in the body, means for providing a connection between the clamping jaws and operating bar whereby movement of the operating bar produces a relative movement of the clamping jaws.

3. Tongs including a body portion, a threaded operating bar adjustably supported within the body portion, a head formed on one end of the operating bar, said head having a groove, clamping jaws associated with the body, each of said jaws having an arm provided with a head on the extreme end thereof, said heads of the clamping jaws being positioned in the groove, whereby movement of the operating bar produces a relative movement of the clamping jaws.

1,351,494. PROCESS OF STEEL TREATMENT. DAVID J. SIMPSON, Chicago, Ill., assignor to Noah Steiner Amstutz, Valparaiso, Ind. Filed Apr. 5, 1915. Serial No. 19,310. Renewed Dec. 29, 1919. Serial No. 348,049. 6 Claims. (Cl. 148—13.)

1. The process of heat treating steel which consists first of subjecting the material to a continuous rising heat up to about 1370 degrees F. for 30 point carbon and about 1270 degrees F. for 65 point carbon, varying this temperature inversely to the carbon content for intermediate products, arresting the application of heat, and then subjecting the same to a continuous rising temperature above the upper critical point, and finally applying a cooling gaseous medium to reduce the temperature rapidly.

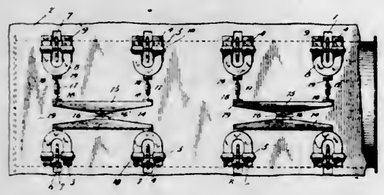
2. The process of heat treatment of steels which consists in heating medium steel (of say 60 to 70 point carbon) for the lower critical point, arresting the application of heat, again heating to above the upper critical point, and finally quenching in a gaseous cooling medium.

1,351,495. STEEL-TREATMENT APPARATUS. DAVID J. SIMPSON, Chicago, Ill., assignor to Noah Steiner Amstutz, Valparaiso, Ind. Filed Apr. 5, 1915. Serial No. 19,311. Renewed Dec. 29, 1919. Serial No. 348,050. 15 Claims. (Cl. 266—2.)

1. A suitable furnace, means for supplying heat thereto in a controllable manner, a cooling device, suitable trackages therebetween, means for transferring material from one to the other, means for hermetically sealing the

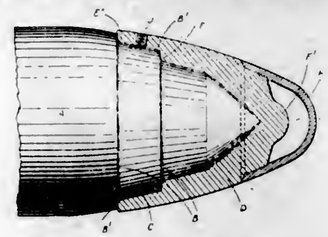
cooling device, means for causing the rapid traverse of a cooling medium therethrough, and means for varying such traverse in different parts of said device.

2. A cooling chamber comprising a movable hood, a water seal tank therefor, a suitable isolated support within the tank, a flexible conduit leading to the hood, a series of outlets attached to said support, and means for controlling the inlet and outlets thereof.



3. A suitable furnace, oppositely placed openings therefor constituting charging and delivery ends, a storage space adjacent each end, a cooling chamber beyond one of the storage spaces, a conveyer traversing the furnace, the inter-space and the chamber, and a second conveyer adapted to traverse over both storage spaces and the furnace on a different plane whereby materials requiring reheating may be delivered from the chamber to the space adjacent the charging end of the furnace without interfering with materials being heated in said furnace and their subsequent transfer to the cooling chamber.

1,351,496. JAR-CLOSURE. CHARLES HORACE SPOONER, Charlestown, N. H. Filed July 9, 1918. Serial No. 244,095. 1 Claim. (Cl. 215—98.)

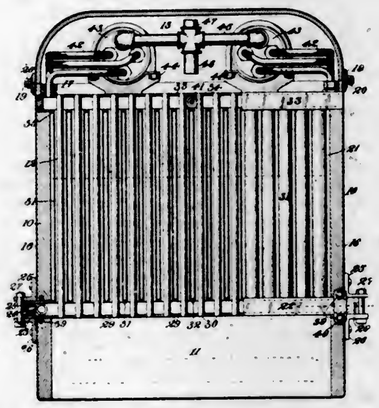


The combination with a jar having a mouth end provided with interior interrupted threads, of a closure comprising a body fitting into the mouth end and provided with interrupted threads to engage the threads of the interior of the mouth end, the marginal edge of the mouth end having an annular recess, said annular recess inclining inwardly and downwardly and having its inner wall substantially vertical, the body of the closure having an annular flange, said annular flange on its under face being provided with an annular recess, which annular recess inclines inwardly and upwardly, an annular recess concentric with the recess of the under face of the flange and adjacent thereto, said second annular recess of the flange and the inclined recesses of the flange and marginal edge of the jar mouth forming means for clamping a rubber washer in such a manner so that the same will be held against outward spreading by the annular recesses which incline inwardly and downwardly and inwardly and upwardly.

1,351,497. SUSPENSION-EQUALIZING DEVICE FOR REVOLVING DRUMS. JOHN STADLER, Shawinigan Falls, Quebec, Canada. Filed Apr. 19, 1919. Serial No. 291,396. 5 Claims. (Cl. 64—60.)

1. The combination with a wood barking machine having a support, chains suspended from said support for supporting a revolving drum, of stationary and movable bearings mounted upon said support, sprocket wheels journaled within said bearings over which pass said chains, an equalizing beam connecting each pair of movable bearings and said beams being pivotally supported to said stationary bearings.

1,351,498. ARMOR-PIERCING PROJECTILE. HARRY BLAND STRANG, London, England. Filed May 28, 1918. Serial No. 237,078. 7 Claims. (Cl. 102—28.)



1. In an armor piercing projectile, the combination of a pointed head, a plurality of forwardly directed resistant surfaces formed on the head and spaced longitudinally thereof, a cap hollowed as to its rear portion and provided with a plurality of rearwardly directed surfaces adapted to abut the resistant surfaces on the head, and means for securing the cap on the head.

1,351,499. SAW. KIYOSHI TAKANO, Honolulu, Hawaii. Filed Nov. 15, 1919. Serial No. 338,221. 3 Claims. (Cl. 143—133.)

1. A saw having a plurality of grooves in each side thereof arranged to hold lubricant, said grooves being of graduating lengths, the ends of said grooves terminating adjacent the edges of the saw.

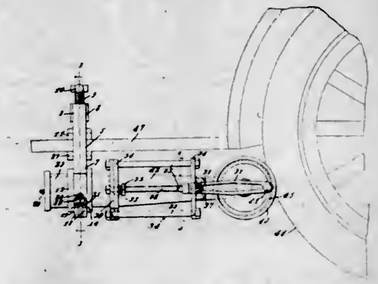
1,351,500. STEAM-BOILER. ERNEST H. VINCENT, Oakland, Calif., assignor of one-half to Herman Christensen, Sunnyvale, Calif. Filed Apr. 3, 1919. Serial No. 287,106. 3 Claims. (Cl. 122—268.)

1. A steam boiler including a series of units each comprising a lower and an upper tube, water tubes and heat tubes therein connected to the lower and upper tubes, a housing, the ends of the lower tubes projecting outwardly beyond the housing, angle plates secured to the housing and engaged with said projecting ends of the lower tubes, bars extending over the projecting ends of the tubes, and vertical bolts connected to the angle plates and extending over the bars.

1,351,501. DISK HARROW. CHARLES E. WHITE, Moline, Ill., assignor to Deere & Mansur Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 9, 1913, Serial No. 788,921. Renewed Jan. 21, 1920. Serial No. 353,094. 6 Claims. (Cl. 55—83.)

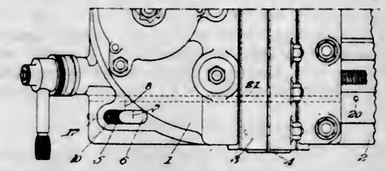
1. In a double disking harrow, the combination of the front frame, the front pair of disk gangs extending inward to the central vertical longitudinal planes of the machine, the rear pair of disk gangs, the rear draft frame having the front hinging element pivoted to the front frame on a line in a vertical transverse plane in front of the forward disk gangs the arch element lying above the forward gang frames and the U-shaped rear element rigid with the arch element formed of a cross-bar, and the short attachment bars rigidly connected to said cross bar and pivotally connected to the rear disk gangs to apply the draft thereto at points in horizontal planes approximating those of the rear gang axles.

2. In a double disking harrow, the combination of the front draft frame, the front pair of disk gangs adapted to have their inner ends adjusted longitudinally and arranged to abut at all times against each other at the central vertical longitudinal plane of the machine, the rear pair of disk gangs, the rear draft frame having the front hinging element pivoted to the front frame on a line in a vertical transverse plane in front of the forward disk gangs the arch element lying over the abutting parts of the forward disk gangs and at its rear end the cross frame element formed of a transverse bar and short longitudinal draft bars respectively pivoted to the rear disk gangs and inclined tension bars extending from the arch element to the said short draft attachment bars.



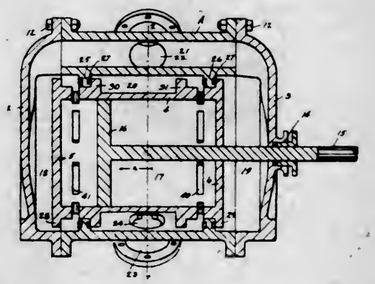
5. In a double disking harrow, the combination of the rear pair of disk gangs, the rear draft frame comprising a U-shaped frame at its rear and arranged to have its parts lie in upwardly and forwardly inclined planes and having draw bars 71 pivotally connected to the disk gangs, and forwardly extending frame parts rigid with said U frame and comprising an arch element and a hinge element, the front pair of disk gangs arranged to abut against each other under the said arch, and the front draft frame pivoted to the said hinge element at a line in front of the front disk gangs.

1,351,502. METHOD OF AND APPARATUS FOR TAKING MOVING PICTURES. WALDON S. BALL, San Francisco, Calif., assignor, by mesne assignments, to Stereoscopic Motion Picture Company, a Corporation of California. Filed Mar. 25, 1916. Serial No. 86,607. 5 Claims. (Cl. 88—16.)



1. An apparatus for taking photographic views, comprising in combination a motion picture camera, a track, a roller carriage on said track to receive the camera, and operative connections between one of the carriage rollers and the film-feeding device.

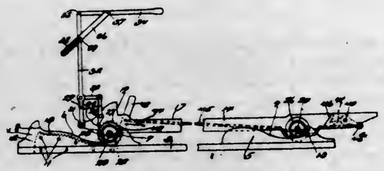
1,351,503. AUTO-TIRE PUMP. EDWARD B. BARNHILL and JOHN STONE, Indianapolis, Ind. Filed Jan. 7, 1920. Serial No. 349,006. 5 Claims. (Cl. 230—27.)



1. An automobile tire pump including a bracket adapted to be clamped to the running board of an automobile, a pump supporting bracket including semi-circular members, a pump barrel adapted to be positioned within the semi-circular members, a frame carried by the pump barrel, a power wheel adapted to contact with the periphery of an automobile wheel, a plunger rod having connection with the power wheel whereby movement of the automobile wheel produces a relative movement of the power wheel to cause the reciprocation of the plunger rod.

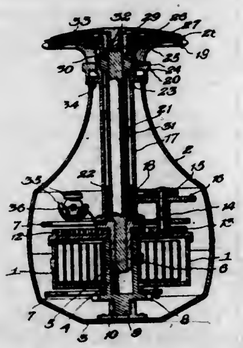
1,351,504. CENTER-INDICATING DEVICE. FREDERICK F. CLARKE, Franklin, Pa., assignor to Colburn Machine Tool Company, Franklin, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1919. Serial No. 288,066. 10 Claims. (Cl. 29—29.)

1. A center-indicating device for boring and turning mills comprising a rectilineally-movable indicating member carried by the saddle of the mill, and means on the cross-rail of said mill for actuating said member to indicate the coincidence of the center line of the tool-socket with the center of the table.



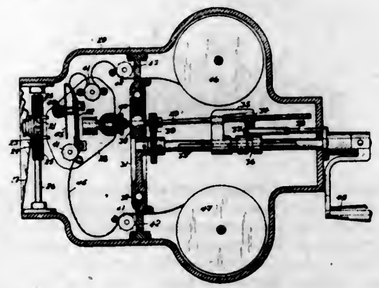
1,351,505. PUMP. IRVING R. COCKROFT, Alameda, Calif. Filed Jan. 28, 1920. Serial No. 354,679. 8 Claims. (Cl. 103—76.)

1. A pumping apparatus comprising two concentric interspaced cylinders, a head member secured on each end



of the outer cylinder, inlet and outlet passages formed in the outer cylinder, a foot valve mounted in the intake passage, a pair of interior flanges formed on the outer cylinder, and interior thereof, said flanges disposed one adjacent each end of the cylinder and forming a sliding support for the inner cylinder, a pair of flanges formed on each end on the inner cylinder and alternately closable against the stationary flanges formed on the outer cylinder, ports formed in the inner cylinder between the flanges, a piston within the inner cylinder, and a piston rod connected therewith and extending through both cylinders.

1,351,506. AUTOMOBILE-LIFTER. JACOB EDWARD COFFEY, Casey, Ill. Filed Feb. 26, 1919. Serial No. 279,319. 2 Claims. (Cl. 254—88.)



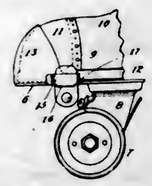
1. The combination with a base frame having inclined tracks provided with abutments, of a superimposed frame provided with flanged wheel connections with said tracks, spring tensioned levers to be engaged by the forward axle of the automobile to move the superimposed frame forwardly, whereby it may engage under and lift the forward axle thereof and consequently the automobile, and a second pair of levers pivoted to the rear of the superimposed frame provided with lifting arms to engage under the rear axle of the automobile to lift the rear end thereof, and connections between the first and second levers, one of said tracks having rack teeth, one of the wheel connections having teeth to engage the rack teeth, and ratchet means coöperating with the teeth of the wheel connections to hold the superimposed frame in its forward raised position.

1,351,507. ROTARY SAFETY-RAZOR. CAP BERTRAND COLLINS, Sioux Falls, S. D. Filed July 27, 1918. Serial No. 247,064. 22 Claims. (Cl. 30—12.)

1. In a rotary razor, a casing, a post therein, blade driving means arranged adjacent said post, a blade carrier rotatably and slidably receivable over the post and engageable with and disengageable from said driving means by mere sliding of the carrier, and means engageable with the post and said blade carrier to hold the carrier against sliding movement.

1,351,508. METHOD OF PRODUCING STEREOSCOPIC EFFECTS IN MOTION-PICTURES. RAYMOND A. DUHEM and JOHN D. GRANT, San Francisco, Calif. Filed Nov. 27, 1917. Serial No. 204,272. 8 Claims. (Cl. 88—16.)

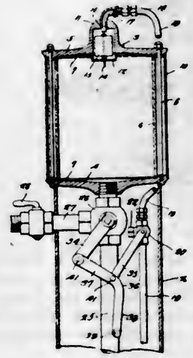
1. A method of producing stereoscopic effects in motion pictures, which consists in taking a series of exposures with a single lens picture camera, and shifting the camera in a manner to cause the principal optical axis thereof to cross a median line at points receding from and approaching the camera.



2. The method of producing stereoscopic effects in motion pictures, which consists in taking a succession of exposures of the same object or scene with a single lens motion picture camera while shifting the camera from side to side, and turning said camera during the course of its shifting movement so that its principal optical axis plays back and forth between the distant and close-up points in an object space which it is desired to hold more or less in the same position on the film.

3. A method of producing stereoscopic effects in motion pictures, which consists in taking a series of exposures with a single lens motion picture camera while shifting the camera from side to side and skewing the camera, so that its principal optical axis crosses a median line at varying points during each cycle of movement.

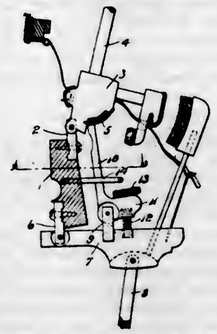
4. A method ofproducing stereoscopic effects in motion pictures, which consists in taking a series of exposures with a single lens motion picture camera while shifting the camera from side to side and skewing the camera, so that its principal optical axis crosses a median line at points gradually receding from and approaching the camera.



5. The method of producing stereoscopic effects in motion pictures, which consists in taking a series of exposures with single lens motion picture camera while shifting the latter, keeping the principal optical axis of the camera directed toward the center of the object space during a portion of its shifting movement and during the remainder of its shifting movement skewing it about so that its principal optical axis crosses a median line at points gradually receding from said point.

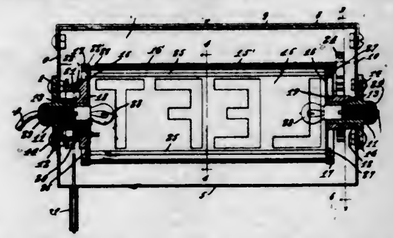
1,351,509. DETACHABLE SHOE-TIP PROTECTOR FOR ROLLER-SKATES. FRANK ESS, Cincinnati, Ohio. Filed Feb. 24, 1919. Serial No. 278,873. 1 Claim. (Cl. 46—53.)

A detachable shoe-tip protector for use with roller or other skates comprising a curved or bowed body-portion, rear-extensions at the opposite ends of the body-portion, forwardly-projecting hooks at the ends of said rear-extensions, inwardly-turned stop-arms or hooks provided on the lower edges of said forwardly-projecting hooks, and a central rearwardly-extending tongue or horizontal foot-piece provided at the lower edge of the body-portion, said hooks being adapted to detachably engage the upright clamping lugs at the fore end of the skate for securing the device against accidental length wise and vertical movements and said tongue or foot-piece being adapted to lie between the sole of the shoe and the fore-portion of the bed-plate of the skate to obviate vertical or tilting movement or displacement of the device on or from the skate either when in or out of use on the foot.



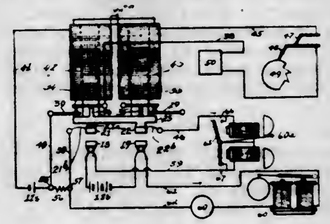
1,351,510. VACUUM GASOLENE-PUMP. GEORGE E. FRIESEN, North Yakima, Wash. Filed Dec. 23, 1918. Serial No. 268,022. 1 Claim. (Cl. 221—99.)

In a device of the class described, a tank; a source of liquid supply; a dispensing outlet; a first valve establishing communication between the source and the tank, and between the tank and the outlet, at different times; a source of suction supply for the tank; an air inlet; a second valve establishing communication between the source of suction supply and the tank, and between the air inlet and the tank, at different times; a third valve coöperating with the source of suction supply to open and close the same; a float operatively connected with the last specified valve and responsive to changes of level in the tank; and means for operating the first and second valves simultaneously.



1,351,511. [WITHDRAWN.]

1,351,512. REGULATING-HOOK FOR PIANO-ACTIONS. WALTER A. GOBLE, Grand Rapids, Mich. Filed Nov. 10, 1919. Serial No. 336,995. 4 Claims. (Cl. 84—26.)

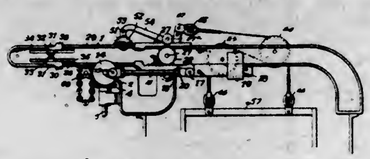


1. In a piano action, a supporting rail, a piano jack pivotally mounted adjacent the supporting rail and having an arm extending upwardly adapted to engage a hammer butt, and a regulating hook secured to and extending from the rail and turned to pass in front of the upwardly extending portion of the jack, said hook being normally rigid but bendable to different positions, and said jack having a part extending away from its pivot and normally lying under the free end of the hook, substantially as and for the purposes described.

1,351,513. AUTOMOBILE-SIGNAL. DORÉ W. GRAZIER, Johnstown, Pa. Filed Feb. 24, 1920. Serial No. 360,738. 3 Claims. (Cl. 116—43.)

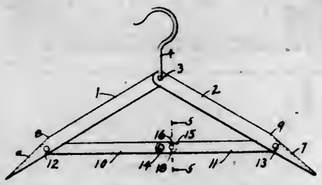
1. In a signaling device, a casing, an inner signaling member supported within the casing, said inner signaling member including side walls, said side walls having cut out portions indicating direction, end sections having offset portions providing seats for the side walls, connecting rods having connection with the end sections for securing the end sections in proper spaced relation, lamp sockets carried by the casing, said inner signaling member adapted to rotate on said lamp sockets, means for moving the inner signaling member in one direction, and means for returning the inner signaling member to its normal position.

1,351,514. FIRE-ALARM SYSTEM. SIMON B. HESS, New York, N. Y. Filed Apr. 24, 1917. Serial No. 164,152. 7 Claims. (Cl. 177—367.)



5. An electric signaling system comprising a bell loop, a station loop, two sources of energy, and means controlled by said station loop in one condition thereof for connecting each loop to a separate one of said sources and in another condition of said station loop for connecting both loops in series to one at least of said sources.

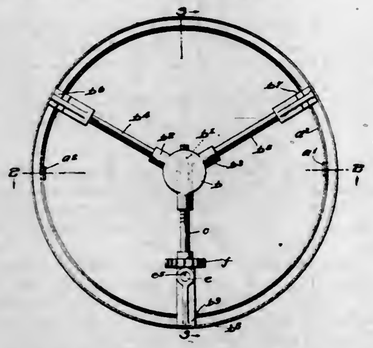
1,351,515. LOOM. BAPTISTE HILBERT, Worcester, Mass., assignor of one-half to George H. Hilbert, Worcester, Mass.; Julie L. Hilbert executrix of said Baptiste Hilbert, deceased. Filed May 19, 1914. Serial No. 839,639. 5 Claims. (Cl. 139—79.)



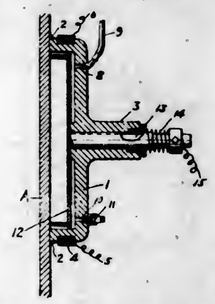
1. In a loom shedding mechanism, a pair of horizontally reciprocating rack bars on opposite sides of the machine, a crank journaled substantially in the plane of and operatively connected with one of said rack bars, means for continuously rotating said crank, a shaft extending transversely across the machine between said rack bars, gears attached to the opposite ends of said shaft engaging said rack bars, upper and lower knife

bars adjustably attached to said rack bars, jack racks engaging said knife bars to move the jack racks in

either direction from a central position, and means for returning the jack bars to a central position independently of their engagement by the knife bars.



1,351,516. DISPLAY-FORM. HENRY HOFFMAN, East Rutherford, N. J. Filed June 7, 1920. Serial No. 386,940. 1 Claim. (Cl. 211—13.)



In a device of the class described, a pair of hinged members each consisting of a flat strip of metal having its edge bent at an angle to the main body portion at one end thereof, a second pair of members made of flat strips of metal hinged to each other and to said first pair, locking means for retaining said second pair in alined position and a hook adapted to support said device in the open position and to retain it in its closed position.

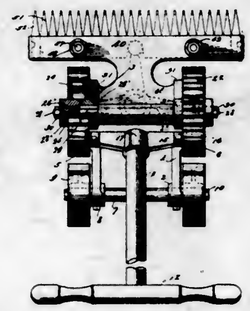
1,351,517. AUTO-TIRE-TUBE CARRIER. CHARLES JERABEK, Philadelphia, Pa., assignor to Louis Rothschild, Philadelphia, Pa. Filed Jan. 20, 1920. Serial No. 352,676. 4 Claims. (Cl. 224—29.)

1. An auto tire-tube carrier, comprising a yoke having shoes, each having a recess in one part and in the other a shiftable foot, for clenchingly engaging a rim of a tire-tube, a spindle engaging said yoke and provided with threaded and unthreaded portions and having a shoe with a shiftable foot, a sleeve mounted on said spindle and having a recessed shoe, a locking-means provided with a plunger and a notched ring threading with said spindle and arranged to permit the plunger of said means to engage a notch of said ring, substantially as and for the purposes described.

1,351,518. CUTTING HOLES IN SHIPS' WALLS. WALTER J. JONES, New York, N. Y., assignor to B. B. Chichester, Leighton P. Stradley, and Harry A. Stone, trustees under a Massachusetts Trust. Filed Dec. 24, 1919. Serial No. 347,222. 3 Claims. (Cl. 219—8.)

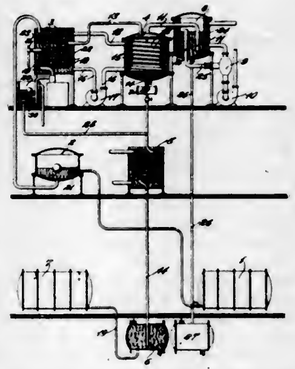
1. Apparatus for cutting holes in submerged ships' walls comprising the combination of a cup-shaped chamber, holding-on electro-magnets for the chamber, inlet and outlet connections for the interior of the chamber, and an electrode mounted in the chamber, substantially as described.

1,351,519. WRENCH. CHARLES L. KELLY, Detroit, Mich. Filed Dec. 24, 1919. Serial No. 347,132. 5 Claims. (Cl. 81—130.)



4. In a wrench, a bar, a jaw member positioned at an angle to the length of the bar and located at one end of the bar, a movable jaw member located above the bar and movable toward or away from the fixed jaw member, interengaging means on the movable jaw member and the bar for holding the movable jaw member in any one of a number of positions against movement away from the fixed jaw member, and spring means associated with the movable jaw member tending to move the same away from the fixed jaw member, and also yieldingly maintain said interengaging means in engagement, substantially as described.

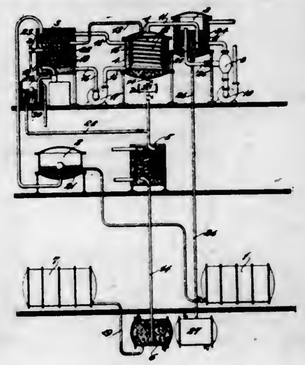
1,351,520. LAWN-MOWER. JOSEPH N. M. KEYZER, Lynchburg, Va., assignor to Southern Electro Steel Company, Inc., Lynchburg, Va., a Corporation of Virginia. Filed Sept. 30, 1919. Serial No. 327,450. 10 Claims. (Cl. 56—263.)



1. A lawn mower comprising a frame composed of two complementary members having oppositely disposed bosses pierced with bearings, a main shaft reduced near each end to form a shoulder, continued beyond the shoulder in a trunnion mounted through one of said bearings, and reduced beyond the trunnion, a pair of main wheels each having a hub with a bore to fit on a reduced portion of the shaft against a boss on one of said members, means

for fastening the hub on the shaft, a cutting apparatus, and a housing carrying said apparatus, its ends being held removably by said members while the latter are held in their normal positions by said shoulders and hubs.

6. In a lawn mower, the combination with a frame, a main shaft therein, drum wheels on said shaft, and cams within their peripheries; of a housing carried by said frame, a cutting apparatus carried by the housing, a stud within said housing, a three-arm rocker having a ring mounted on said stud, its front arm connected with said apparatus and its lateral arms projecting into said drum wheels, and pawls mounted on the extremities of the lateral arms and alternately engaged by the cams in the wheels to rock the driving mechanism when the wheels rotate forwardly.



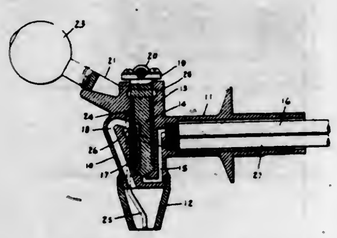
1,351,521. PROCESS OF DEALCOHOLIZING LIQUIDS. WILLIAM KOEDDING and WILLIAM J. LEMP, St. Louis, Mo. Filed Feb. 21, 1917. Serial No. 150,024. 6 Claims. (Cl. 195—1.)

6. The process of de-alcoholizing beer which consists in maintaining a fair degree of vacuum in a vacuum chamber, heating the beer in a pipe system to a temperature in the neighborhood of that required for evaporation in said vacuum chamber and in passing said beer in a continuous stream slowly through said chamber, and maintaining the beer while passing through said chamber at a temperature high enough to evaporate most all of the alcohol but low enough to avoid impairing the other contents of the beer.

1,351,522. APPARATUS FOR TREATING LIQUIDS. WILLIAM KOEDDING, St. Louis, and WILLIAM J. LEMP, county of St. Louis, Mo. Filed Apr. 14, 1917. Serial No. 162,046. 7 Claims. (Cl. 195—1.)

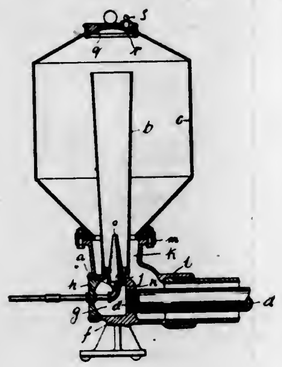
5. An apparatus for treating liquids comprising a water jacketed evaporating tank having an open helical V-shaped trough formed on the wall thereof opposite said jacket, means outside of said jacket for heating and circulating heated water through said jacket, a suction device connected to said evaporating tank, means for delivering liquid on to the upper portion of said trough, and means for removing the liquid from the lower portion of said tank, a surface condenser in the suction system and means for draining off the liquid condensed in said condenser.

1,351,523. STATION-INDICATOR. MARTIN M. KOVAL, Heilwood, Pa., assignor of one-half to Frank Muller, Warren, Ohio. Filed Jan. 19, 1920. Serial No. 352,261. 1 Claim. (Cl. 40—86.)



A device of the class described comprising a frame, a cover for said frame, a partition therein dividing said frame into two compartments, a drum mounted in the lower portion of one of said compartments, a second drum mounted in the upper portion of the same compartment, shafts upon which said drums are loosely mounted, a clutch on each of said shafts for locking or releasing said drums upon their respective shafts, a clutch-operating handle extending from each of said clutches and passing out from said frame, the upper of said drums being provided with a notch in the periphery thereof, a pawl adapted to releasably engage said notch, a spring normally urging said pawl against the periphery of said drum, a cord attached to said pawl and passing outward from said frame, a gear mounted rigidly upon the shaft of said first-named drum and located in the other of said compartments, a spring motor adapted to rotate said last-named shaft, a pinion rigid to the shaft of said last-named drum, gears connecting said first-named gear with said pinion, a tape wound partly upon each of said drums, an opening in said frame, and legends printed on said tape adapted to appear singly behind said opening.

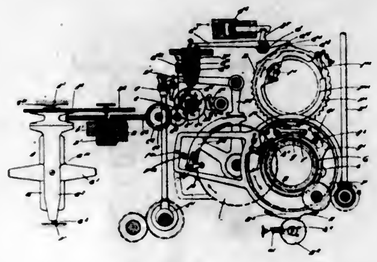
1,351,524. FAUCET. WILLIS E. LA RUE, Indianapolis, Ind., assignor of one-half to William P. Hall, Indianapolis, Ind. Filed Oct. 28, 1919. Serial No. 334,051. 6 Claims. (Cl. 225—23.)



1. A faucet structure having a valve chamber therein with a valve seat, a liquid inlet communicating with said

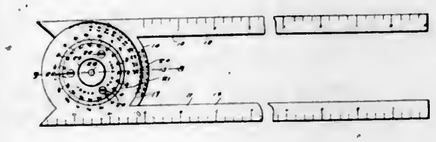
chamber through said valve seat, an outlet communicating with said chamber, a reciprocatory valve plunger adapted to seat in said valve seat having a passage there-

through for opening and closing the communication between said inlet and outlet, and means for preventing leakage from said faucet when said valve is closed.



1,351,525. HEATING-STOVE BURNING GAS OR THE LIKE. FREDERICK MACKENZIE LEA, Birmingham, England. Filed Oct. 31, 1918. Serial No. 260,562. 3 Claims. (Cl. 126—85.)

1. An improved heating stove for burning gas in the presence of air, comprising in combination a burner chamber, a gas burner arranged therein, an air pipe leading to said burner chamber, an outer chamber having a seating at the top, a chimney outlet from said burner chamber above said burner, and within but closed from said outer chamber, a closed casing of larger volume surrounding said chimney and secured on the seating of said outer chamber, said casing having free communication with the interior of said outer chamber, and said outer chamber having an outlet pipe for the products of combustion communicating therewith, said products rising in said chimney and being received in said casing and having their exit through said outer chamber below said casing.

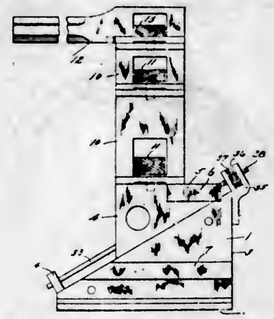


1,351,526. AUTOMOBILE TORPEDO. EDGAR LEES and HERBERT WHEATLEY RIDSDALE, Weymouth, England, assignors to The Whitehead Torpedo Works (Weymouth,) Limited, Weymouth, England. Filed June 6, 1919. Serial No. 302,367. 7 Claims. (Cl. 114—23.)

1. An automobile torpedo of the kind set forth, wherein means are provided for causing relative movement to occur between the controlling valve and the valve seating the said means embodying a cam which remains dormant

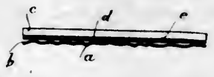
until the torpedo has run a predetermined distance after launching.

1,351,527. DRAFTSMAN'S PROTRACTOR. DAVID CABRERA LOPEZ, Chicago, Ill. Filed Sept. 13, 1919, Serial No. 323,468. Renewed July 22, 1920. Serial No. 398,285. 5 Claims. (Cl. 33—117.)



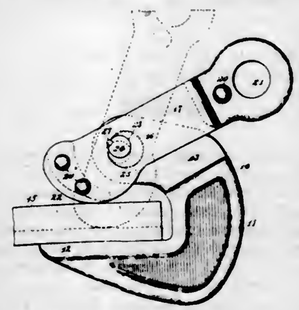
1. A protractor comprising sections each having an arm, a head carried by each arm, the head of one arm being provided with a central opening undercut and the head being further provided with a circular seat in its upper face positioned about the central opening and in spaced relation thereto to provide a collar about the opening, the head of the second arm fitting into the seat of the first head and provided with a central opening receiving the collar of the first head, a disk secured upon the collar of the first head and providing a dial overlapping the outer face of the second head to rotatably hold the second head in engagement with the first head, said dial being provided with a central opening registering with the central opening of the first head, and said dial being provided with scale markings about its periphery coöperating with corresponding scale markings adjacent the inner edge of the second head and the second head being provided adjacent its outer periphery with scale markings coöperating with the scale markings upon the outer face of the first head, a fastener having a screw provided with a head fitting into the undercut opening of the first head, a collar carried by the head of the screw and fitting into the opening of the dial, a threaded stem extending from the collar, a locking washer upon the threaded stem engaging the disk, and a securing nut screwed upon the threaded stem and engaging the locking washer.

1,351,528. GAGE. ALBERT W. MARTIN, Columbus, Ohio. Filed Jan. 4, 1919. Serial No. 269,551. 5 Claims. (Cl. 33—162.)



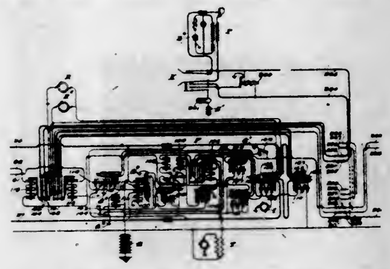
1. In a gage, a triangular base member including a recess formed therein and an inclined edge, a slide member movably positioned upon said edge, a shouldered projection rigidly depending from said slide member and arranged to be slidably received within the recess formed in said base member, a plate adjustably located within said

recesses, said plate being provided with a shoulder arranged for coöperation with said projection, and means



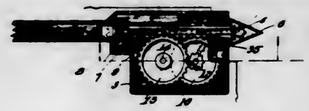
operating to raise and lower said plate so as to release or clamp said slide member in its adjusted positions with respect to said base member.

1,351,529. METHOD FOR PRODUCING IMITATION OF MOTHER-OF-PEARL. EMILE MAUVILLIN and VICTOR GUILLET, Courbevoie, France. Filed May 11, 1914. Serial No. 837,876. 2 Claims. (Cl. 41—22.)



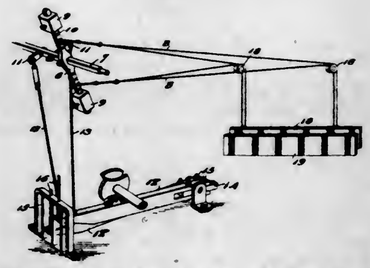
1. Article presenting the appearance of mother of pearl formed by: an iridized and irregularly undulated surface, a ground diffuser screen placed on said surface and a glass plate itself placed on said screen and provided on its lower surface with designs or letters having parts alternately opaque and transparent.

1,351,530. LIFTING-CLAMP. CASPER D. MEALS, Trenton, N. J., assignor to Reading Steel Casting Company, Reading, Pa., a Corporation of New Jersey. Filed Sept. 16, 1919. Serial No. 324,103. 10 Claims. (Cl. 294—101.)



1. A lifting clamp comprising a frame composed of connected overhanging arms, the one arm being formed as an abutment and the opposite arm reduced to thickness and provided with a pivot opening extending therethrough, a clamping lever composed of two side sections forming a slot therebetween receiving the reduced arm within said slot, a pivot pin engaging openings provided in the side sections of said clamping lever and within the arm of the frame, the lower extremity of the clamping lever provided with a cam face and the opposite extremity of the lever provided with means for securing it to a lifting member.

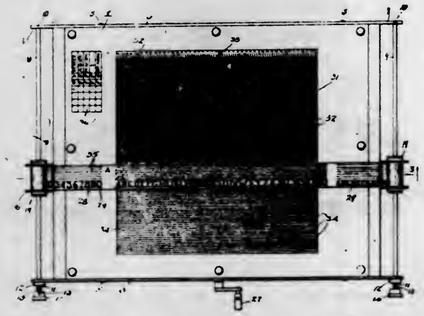
1,351,531. AUTOMATIC TELEPHONE SYSTEM. TRYGVE E. MEYER, Lombard, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1916, Serial No. 77,216. Renewed Jan. 29, 1919. Serial No. 273,888. 41 Claims. (Cl. 179—17.)



35. In a telephone system, an automatic connector switch, a party line accessible to said connector via as many paths as there are stations on the line, means for operating said connector to connect with said line, and means operated automatically when the connector is seized for predetermining over which path the connection is to be established.

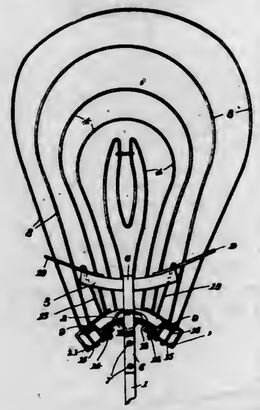
1,351,532. SIGNALING DEVICE FOR VEHICLES. PETER J. O. MUELLER, Peoria, Ill. Filed Dec. 31, 1917. Serial No. 209,747. 3 Claims. (Cl. 116—50.)

1. In a vehicle signal, a casing, a signal arm movable relative to the casing, rack teeth borne by the arm, a shaft in the casing, a pinion on the shaft, a gear on the shaft in mesh with said rack teeth, a spring coiled on the shaft and connected to the gear and casing so as to be wound upon movement of the gear in one direction, a second shaft slidable in the casing, a gear on the second shaft in mesh with said pinion, means to rotate and slide the second shaft, and a coil spring coiled on the second shaft and abutting the gear thereon and the casing to hold the second gear normally in mesh with said pinion.



1,351,533. HATBAND-LOOM. AUGUST MUELLER, New York, N. Y. Filed Aug. 20, 1919. Serial No. 318,700. 2 Claims. (Cl. 139—78.)

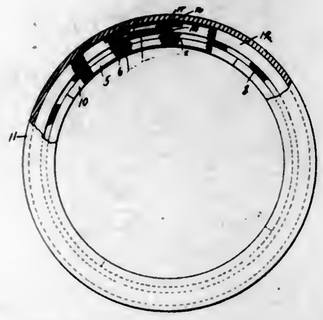
1. The combination with a shaft, of adjustable arms thereon, treadles, and connecting wires between the arms



and treadles whereby the arms are operated by the reciprocal movements of the treadles, supports for the treadles comprising loosely mounted vertical slidable bolts and springs coiled around the bolts, said bolts being mounted in an angular frame, and the ends of the treadles engaging under the bolts.

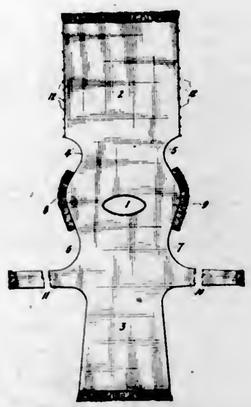
1,351,534. DRAFTING APPLIANCE. ROBERT H. PERDUE and LEROY W. THEIS, Cleveland, Ohio. Filed Oct. 17, 1919. Serial No. 331,393. 9 Claims. (Cl. 35—12.)

1. In a drafting appliance, the combination of a board, provided with a form having both transverse and longitudinal spacings, a character strip mounted over said board, said strip and board being capable of both longitudinal and transverse relative movement, said strip having characters thereon, the size of said characters bearing a direct relation to said spacings.



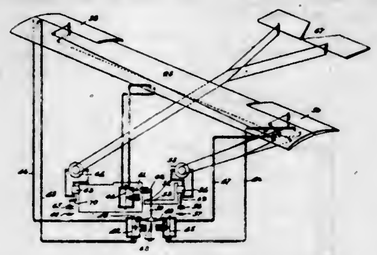
1,351,535. CARPET-BEATER. JOHN O. PIERCE, New York, N. Y. Filed Aug. 22, 1918, Serial No. 250,934. Renewed Jan. 28, 1920. Serial No. 354,752. 11 Claims. (Cl. 15—8.)

1. The combination with a basic carpet beater, of additional bows, and means for detachably fastening said bows to the basic beater in line with its bows to increase the size of said beater.



1,351,536. CUSHION-TIRE. JOHN M. RAMAGE, Uniontown, Pa. Filed Nov. 6, 1919. Serial No. 336,151. 1 Claim. (Cl. 152—8.)

In a cushion tire, a plate longitudinally and laterally curved having its ends overlapping to form a casing support, arms secured to the plate near each end, the said arms being arranged near opposite edges of the said plate, the arms at one end of the plate projecting toward the arms near the opposite end of the plate, sets of links, the links of each set being pivotally connected, means for

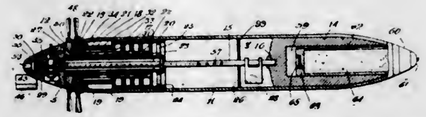


pivotally connecting the end links of each set to the oppositely disposed arms of the plate for flexibly connecting the two sets of arms, and means for yieldingly supporting the plate.

1,351,537. WEARING-APPAREL, PARTICULARLY RELATING TO GOWNS, DRESSES, COATS, AND THE LIKE. LEONIE SOPHIA REYNARD, London, England. Filed Sept. 29, 1919. Serial No. 327,076. 2 Claims. (Cl. 2—145.)

2. A full length external garment for women's wear comprising a piece of material, the general outline of which when laid out flat is rectangular and of greater length than breadth, said material having an approximately central aperture through which the wearer's head is to be passed to permit said material to fall in front and at the rear of the wearer, the hanging front portion being of a width to permit its two side edges to meet together approximately centrally when drawn together at the back of the wearer underneath the hanging back portion, coöperating fastening devices to connect together the said meeting edges of the said hanging front portion, and two laterally extending tongues rearward of said aperture one extending from each side of said material to form a girdle to be brought around and secured in front of the wearer, and curved recesses to pass under the arms of the wearer and lateral extensions to lie over the shoulders of the wearer.

1,351,538. INDICATOR FOR FLYING-MACHINES. JOHN NEWBERRY REYNOLDS, Greenwich, Conn. Filed Sept. 29, 1917. Serial No. 193,901. 12 Claims. (Cl. 244—29.)

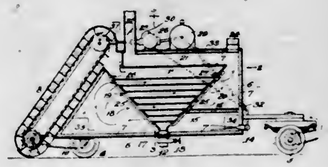


1. A flying machine having an aerofoil, means responsive to air reactions at a plurality of points on the aerofoil and due to that relative movement of the air and aerofoil, which produces the necessary lifting forces, and means operated by the average of said reactions for stabilizing the machine.

1,351,539. BOTTLE CAPPING AND CORKING TOOL. ADEN H. ROBERTS and GEORGE W. WHED, Waverly, N. Y. Filed May 20, 1920. Serial No. 382,851. 6 Claims. (Cl. 226—84.)

3. In a bottle capping device, the combination of two bottle clamping arms hinged together; a die-carrier arm hinged to one of said clamping arms and confined to swing substantially in a single plane with reference thereto; and a cap-applying die mounted on said die-carrier arm.

1,351,540. PROJECTILE. WILLIAM F. ROOS, Mamaroneck, N. Y. Filed Aug. 21, 1917. Serial No. 187,403. 13 Claims. (Cl. 102—2.)



1. In a device of the class described, a projectile having a gas chamber, a gas-operated projecting device for said projectile and means for conducting a part of the projecting gas to said chamber and storing it there for use in propelling said projectile.

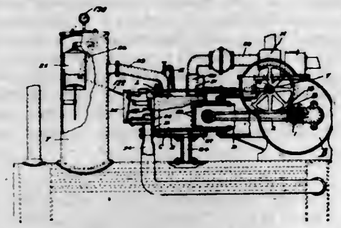
1,351,541. COKE-HANDLING APPARATUS. WILLIAM F. RUST, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1919. Serial No. 328,571. 5 Claims. (Cl. 214—18.)

1. In a coke-handling apparatus, in combination with a coke-oven battery; a quenching-car movable lengthwise of said battery; a coke-wharf positioned adjacent to said battery for receiving freshly quenched coke discharged from said quenching-car; an endless conveyer positioned for receiving and carrying away coke discharged from said coke-wharf; a coke storage pit located adjacent to said battery and also adapted to receive freshly quenched coke discharged from said quenching-car; a hopper in juxtaposition to said coke-pit; means for feeding coke from said pit into said hopper; and another endless coke conveyer leading from said hopper to said first-named conveyer, whereby coke deposited in the hopper may be advanced to said first-named conveyer; substantially as specified.

1,351,542. SNOW REMOVING AND MELTING MACHINE. JOHN J. RYAN, Bayonne, N. J. Original application filed Jan. 28, 1919, Serial No. 273,612. Divided and this application filed June 21, 1919. Serial No. 305,853. 7 Claims. (Cl. 126—343.5.)

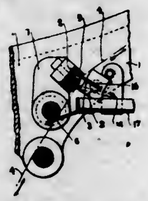
1. A snow removing and melting machine, comprising a tank vehicle, a snow receptacle located in the tank body and having its front and back walls and the lower parts of its sides inclined, a discharge spout at the apex of the inclined walls and sides, a combustion chamber at the lower part of the front of the tank body, burners in said chamber, a chamber at the rear of the tank body communicating with the combustion chamber around the lower part of the snow receptacle, a chimney chamber above the combustion chamber, and flues arranged fore and aft through the snow receptacle for the products of combustion to pass from the rear chamber to the chimney chamber.

1,351,543. SHOE-HEEL. AGOSTINO SANTACROCE, Cleveland, Ohio. Filed Feb. 26, 1920. Serial No. 361,605. 7 Claims. (Cl. 36—35.)



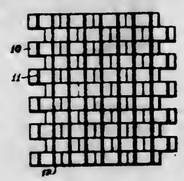
1. A heel comprising a hollow skeleton cage with a top plate, an attaching plate adapted to be secured to the shoe, and attached to said top plate, and a filling of rubber in said cage and projecting below the bottom thereof.

1,351,544. ENGINE. GEORGE W. SWARTZ, Peoria, Ill. Filed Oct. 21, 1916. Serial No. 126,858. 6 Claims. (Cl. 123—6.)



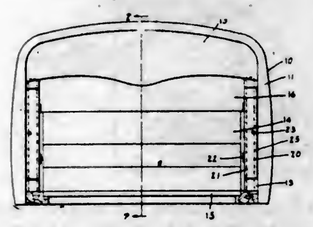
2. In an internal combustion engine, a cylinder and piston operable therein, means for supplying a charge of combustible gas to the cylinder for certain power strokes of the piston, means for supplying a charge of hot water into the cylinder for certain other power strokes of the

piston which alternate with the intervals during which the gas is supplied, and means for supplying a scavenging charge of air to the cylinder between the charges of gas



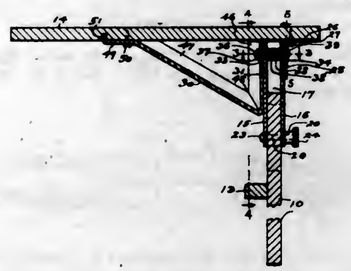
and hot water whereby the saturated atmosphere within the cylinder will be exhausted prior to a succeeding charge of gas.

1,351,545. INK-SAVING DEVICE FOR INTAGLIO PRINTING AND EMBOSSING PRESSES. FRED WAITE, Otley, near Leeds, England. Filed Feb. 11, 1920. Serial No. 357,992. 2 Claims. (Cl. 101—169.)



1. In ink saving devices of the scraper type for the recovery of ink from the wiping paper of intaglio printing and embossing presses; the combination with a scraper blade situated across the machine at one side of the paper, of a member situated across the machine at the opposite side of the paper and being formed with a longitudinal narrow groove or recess into which the scraper blade projects, and means for adjusting the position of the scraper blade to regulate the depth thereof in the groove or recess of the said member to cause the paper to be bent at an angle to an extent sufficient to keep the contact between the scraper blade and the paper practically uniform irrespective of the tension of the paper behind.

1,351,546. WOOD-BLOCK PAVING. GEORGE W. WARMOTH, Indianapolis, Ind. Filed Oct. 4, 1918. Serial No. 256,850. 5 Claims. (Cl. 94—13.)



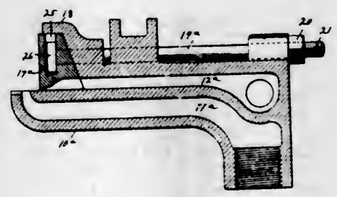
1. A pavement or flooring formed of rows of blocks, each row comprising a plurality of identically shaped blocks adjacent each other, each block having a plurality of transversely extending and parallel kerfs angular in cross section cut in the under side thereof and intermediate the ends, the kerfs in the diagonally adjacent blocks in the adjacent rows registering with each other, and strips angular in cross section inserted in said kerfs for securing the blocks together as a pavement.

1,351,547. CURTAIN COMPARTMENT FOR AUTOMOBILES. JOHN W. APPLIN, Indianapolis, Ind., assignor to La Fayette Motors Company, a Corporation of Delaware. Filed Dec. 13, 1919. Serial No. 344,693. 5 Claims. (Cl. 296—37.)

1. In combination with the driver's space of a motor vehicle having a floor, a foot board extending forwardly of and upwardly from said floor, and a cowl forming the sides and top of said space, of a vertical compartment mounted in a side of said space, said compartment extending forwardly from the floor and below the upwardly extending surface of said foot board for inclosing a space adapted to receive curtains, and a door for said compartment and opening into the driver's space for permitting curtains to be inserted therein, said door being positioned between the upwardly extending foot board and the compartment portion nearest the driver's seat.

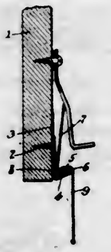
1,351,548. TABLE ATTACHMENT FOR SEATS. KENNETH S. BASKIN, Cleveland Heights, Ohio. Filed May 3, 1920. Serial No. 378,360. 12 Claims. (Cl. 155—128.)

1. The combination, with a seat, a standard at the forward end and one side of the seat, a support adjustable up and down said standard, means for securing said adjustable support in the desired adjustment, and a table extending over said adjustable support and arranged in the main at the laterally inwardly facing side of and pivotally connected to said support and movable, when free to be readjusted, circumferentially of its axis, from a substantially horizontal position into an inclined position or vice versa, of a brace arranged under said table and secured to the table at a point spaced laterally inwardly from the aforesaid adjustable support and extending from the table downwardly to said side of said support, said brace being pivotally connected to said adjustable support and having its axis coincident with the axis of the table, said table and said brace being adjustable rearwardly and forwardly in a substantially horizontal plane, and means for securing the brace and the table to said adjustable support in the desired adjustment of the table



in relation to said support, the last-mentioned securing means and the aforesaid axes being in the same horizontal plane.

1,351,549. FISHING-REEL. LAWRENCE BENSON, Kokomo, Ind. Filed Oct. 21, 1919. Serial No. 332,160. 3 Claims. (Cl. 242—84.5.)



1. A fishing reel including a spindle having a shoulder at one end thereof and with the outer end threaded and an intermediate angular portion, a reel plate, a hub mounted on the round portion of said spindle with one end bearing against said shoulder and with the other end secured to said plate, a yielding washer with an angular opening mounted on the angular portion of said spindle and engaging the outer side of said plate, a nut on the threaded end of said spindle with an inwardly extending sleeve recessed so that when the nut is screwed inwardly it will not engage the angular portion of said spindle, and a spiral spring surrounding said sleeve with one end bearing against the nut and the other end bearing against said washer.

1,351,550. BURNER. ANNIE H. BEST, Brooklyn, N. Y., assignor to W. N. Best, Inc., New York, N. Y., a Corporation of New York. Filed June 3, 1919. Serial No. 301,523. 7 Claims. (Cl. 158—78.)

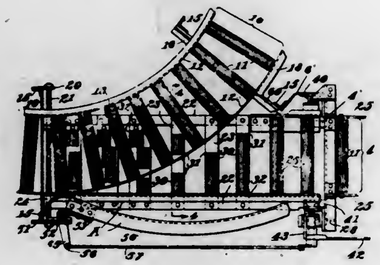
5. A burner including a body portion, having a fuel passage therethrough terminating in an upwardly facing outlet, an expansive fluid passage terminating in a recess adjacent to but in the rear of said outlet, a nozzle piece within said recess, and a bolt extending lengthwise of said burner and connected to said nozzle piece outside of said expansive fluid passage for retaining said nozzle piece in position.

1,351,551. FABRIC-CLAMP. ROY W. BIDDLECOM, Los Angeles, Calif., assignor to L. B. Girard, Los Angeles, Calif. Filed Dec. 16, 1919. Serial No. 345,374. 4 Claims. (Cl. 24—259.)

1. A fabric clamp comprising a strip having one longitudinal edge bent and doubled back to form a groove and a second strip having one longitudinal edge bent to form an angular tongue, said tongue interfitting within said groove to grip a fabric interposed between said strips.

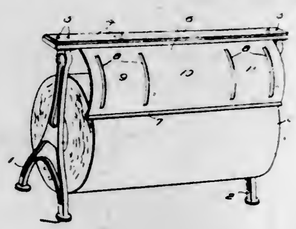
1,351,552. PENCIL. JOHN BAICKEN, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed July 19, 1918. Serial No. 245,759. 2 Claims. (Cl. 120—18.)

1. In a pencil of the type described, a barrel or storage chamber, a plug in the outer end thereof provided with an outwardly opening socket, a spring pronged element designed to fit within said socket and adapted to project outwardly beyond the end of said barrel, a strip of flattened lead designed to fit between said prongs and to be held thereby against rotation, a rotatable cap fitting over said prongs and held thereby, and a screw-threaded aperture in one end of said cap designed to receive one end of said lead and to feed the same inwardly or outwardly, the screw threads formed on said lead by said feeding operation serving to maintain the same against accidental longitudinal displacement.



1,351,553. SUSPENDERS. WAITMAN D. CORDER, Philippi, W. Va. Filed Feb. 18, 1920. Serial No. 359,641. 3 Claims. (Cl. 267—71.)

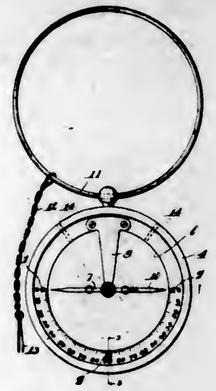
1. A suspender comprising an inelastic webbing shaped to form a pocket which has eyes formed in its lower end, a member depending within said pocket, a bar suspended upon said member at the lower end of said pocket, said



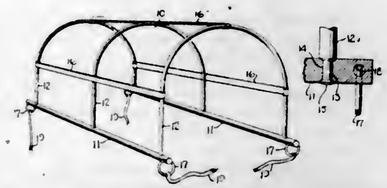
bar having eyes in its opposite ends in register with the eyes in said pocket, a looped cord with its loop-end located outside said pocket and having its opposite end portions extending through the registering eyes of said pocket and said bar into the interior of said pocket, means connecting the upper ends of said end portions, and coil compression springs encircling said end portions and interposed between said connecting means and said bar.

1,351,554. CONVEYER. JAMES T. COWLEY, Minot, Mass., assignor to The Lamson Company, Boston, Mass., a Corporation of New Jersey. Filed Dec. 14, 1918. Serial No. 266,712. 18 Claims. (Cl. 193—1.)

1. A conveyer having therein a track or way adapted to contact with, support and direct loads moving thereon by the action of a force on the load, in combination with a branch track or way, and means adapted to contact with, support and differently direct the load adjustable into and out of position to coact with the load at a number of different places distributed throughout the region of juncture of said main and a branch track or way to remove the load at said region from operative contact with said main track or way and direct the load to or from the main track or way.



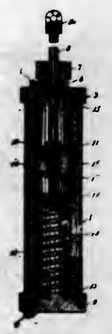
1,351,555. ROLL-PAPER GUARD AND CUTTER. HAROLD B. CRANSHAW, Boston, Mass. Filed July 28, 1919. Serial No. 313,794. 5 Claims. (Cl. 211—32.)



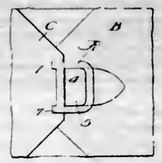
1. In a roll paper dispenser, a paper cutter comprising a relatively wide curved guard member, the lower edge of said guard member being bent to provide a cutting blade, and integral, transverse card holding ribs struck up from said gurd and disposed in pairs, said ribs serving simultaneously as stiffening members and as guides for retaining display cards upon the face of said guard.

1,351,556. INSTRUMENT FOR LOCATING BURIED OBJECTS. WILLIAM S. DARLEY, Chicago, Ill. Filed Mar. 19, 1918. Serial No. 223,346. 3 Claims. (Cl. 33—222.)

1. A device of the class described comprising a casing: a magnetic needle pivotally mounted in said casing, there being an opening in the wall of said casing registering with the path of movement of said needle; and a retaining device insertible through said opening to engage the point of said needle to prevent rotation thereof, substantially as described.

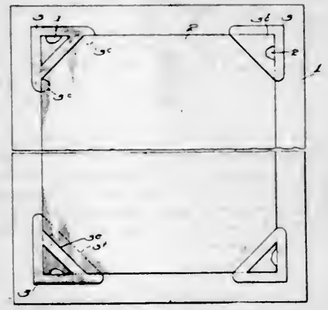


1,351,557. BEDCLOTHES-SUPPORT. LAURA M. DOBBINS, Orange, N. J. Filed Mar. 19, 1920. Serial No. 367,053. 2 Claims. (Cl. 5—41.)



2. In a bed clothes support, a pair of substantially parallel base members, hoops pivoted thereto in the neighborhood of each end, an intermediate shorter hoop, and longitudinally extending members pivoted to each of the hoops, whereby the sides are left substantially unobstructed and the support can be folded flat when out of use.

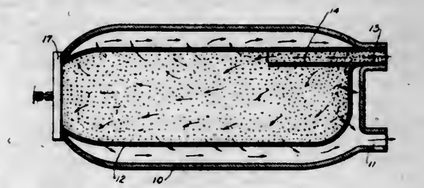
1,351,558. SHOCK-ABSORBER. DAVID W. DURBIN, Bridgeville, Pa. Filed Oct. 15, 1919. Serial No. 330,902. 6 Claims. (Cl. 267—8.)



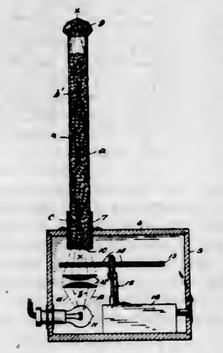
6. In a shock absorber, a cylinder, removable heads closing the ends of the cylinder, a liner removably mounted in the cylinder consisting of two sections, detachably secured together at their inner ends, the upper section having a bore tapering from its inner end, the lower section having a similar tapering bore and in addition a straight bore in its lower end, a rod slidable through one of said heads, a spherical piston secured on said rod and operable in the bore of the liner, said piston having a diameter approximately equal to that of the liner at the points corresponding to the upper and lower extreme positions of said piston, a coil spring located below said piston and means for guiding said spring axially relatively to said rod.

1,351,559. GUMMED SEAL. ALBERT W. ENGEL, Chicago, Ill. Filed Aug. 29, 1919. Serial No. 320,707. 3 Claims. (Cl. 229—79.)

1. An envelop sealing device consisting of a flap having a relatively narrow terminal, in combination with a seal for the envelop consisting of a sheet of material having a slit through which the terminal of the flap extends, the flap being gummed at its inner side to the end of the terminal, and the dimensions of the seal, the length of the slit and the width of the terminal being so proportioned that the terminal protruding through the slit extends beyond the portion of the seal which is overlapped for adhering to the envelop body beyond the seal.



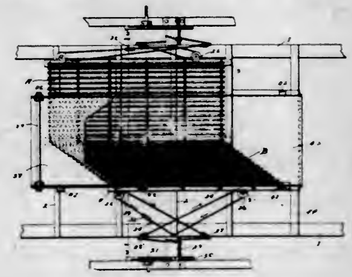
1,351,560. PICTURE-MOUNTING DEVICE. ALBERT W. ENGEL, Chicago, Ill. Filed Aug. 29, 1919. Serial No. 320,708. 4 Claims. (Cl. 40—156.)



3. A picture or card mounting device, consisting of a corner piece gummed on one side, and having a corner embracing aperture two adjacent sides of which form an angle equal to that of the corner of the card or picture to be mounted, and having at intervals from said aperture along the lines, respectively, of the sides of said angle produced, portions extending from said lines inward for engaging back of the card or picture.

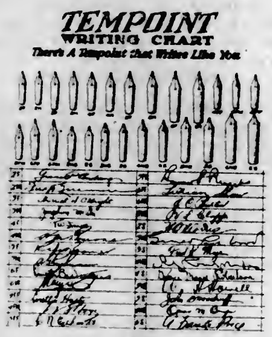
1,351,561. DUST-COLLECTING BAG FOR CLEANING APPARATUS. WILLIAM W. FARNSWORTH, Littleton, Colo. Filed Apr. 8, 1920. Serial No. 372,251. 6 Claims. (Cl. 183—44.)

1. An impurities collecting bag or sack for cleaning apparatus embodying an outer casing constructed of flexible material impervious to air and having a discharge outlet, a partition in the sack through which the air currents may pass to remove the impurities from the air before the air passes through the said outlet, and an inlet for conveying the impurities-laden air into the bag or sack, the said inlet and outlet being out of communication with each other except through the said partition.



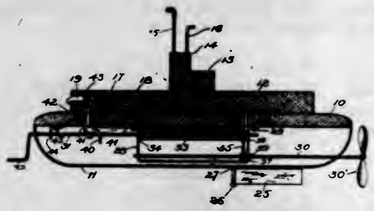
1,351,562. ILLUSION APPARATUS. DONOVAN FOSTER, Seattle, Wash., assignor of one-fourth to J. B. Wadman, Seattle, Wash. Filed Sept. 10, 1919. Serial No. 322,801. 5 Claims. (Cl. 240—1.)

1. An optical illusion apparatus comprising a cabinet provided with an opening, a transparent glass rod connected to said cabinet at the opening thereof, an object on the end of said rod remote from the cabinet, said object being provided with a light diffusing surface and a source of light provided within said cabinet and arranged in alinement with the axis of said rod.



1,351,563. ADJUSTABLE BAR-COAL SCREEN. JAMES C. GASKILL, Fairmont, W. Va. Filed Feb. 6, 1920. Serial No. 356,717. 10 Claims. (Cl. 83—56.)

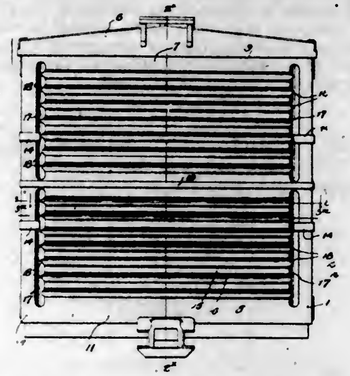
1. In a device of the class described, a frame, comprising side beams and transversely disposed I-beams, a stationary, central, longitudinal supporting beam, trans-



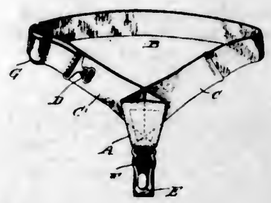
verse lug-carrying members pivotally supported upon the stationary central longitudinal beam, additional longitudinal beams pivotally supporting the outer ends of said transverse members, a multiplicity of spaced parallel bars, and lugs carrying said bars, said lugs being mounted upon said transverse lug-carrying members, and said additional longitudinal beams being slidably supported by said transverse I-beams, as and for the purpose set forth.

1,351,564. CHART FOR FOUNTAIN-PENS. WILFRED E. GERRY, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 24, 1919. Serial No. 284,885. 2 Claims. (Cl. 283—1.)

1. In a chart for the selecting of pen nibs, the combination of a plurality of specimens of handwriting, a directive legend associated with each specimen of handwriting, and an illustration of various styles of pen nibs, each pen nib being suitable for use with one of the styles of handwriting and having associated therewith a legend corresponding to the legend associated with the style of handwriting intended to be written by said pen nib.



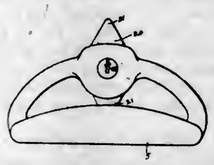
1,351,565. TOY SUBMARINE. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed May 13, 1918. Serial No. 234,200. 9 Claims. (Cl. 46—37.)



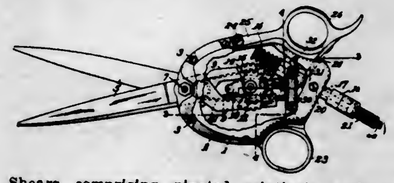
1. A toy submarine, having a hull, a deck upon said hull, said deck having a torpedo-receiving opening in one end thereof, a spring operated propeller for said submarine, and means controlled by the tension of said spring for releasing a torpedo from said torpedo-receiving opening, said means including a shaft for placing said spring under tension.

1,351,566. METAL CAR END. CHARLES F. GILES, Louisville, Ky., assignor, by mesne assignments, to Walter P. Murphy, Chicago, Ill. Filed May 8, 1916. Serial No. 96,071. 13 Claims. (Cl. 105—410.)

1. A metal facing member for railway cars comprising a metal sheet constructed for attachment to vertical and horizontal portions of the car body, with its main area shaped with horizontal corrugations extending nearly to the vertical margins of the sheet, and with vertical corrugations near said vertical margins lying transversely across the ends of the horizontal corrugations; there being a plurality of said vertical corrugations at each end of the horizontal corrugations; one of the vertical corrugations being merged with ends of the horizontal corrugations, and the adjacent vertical corrugation being spaced from said merged corrugation.

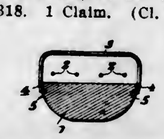


1,351,567. GARTER. ROBERT GORTON, Brookline, Mass.; Charles W. Noyes administrator of said Robert Gorton, deceased. Filed Oct. 7, 1919. Serial No. 329,072. 2 Claims. (Cl. 241—6.)



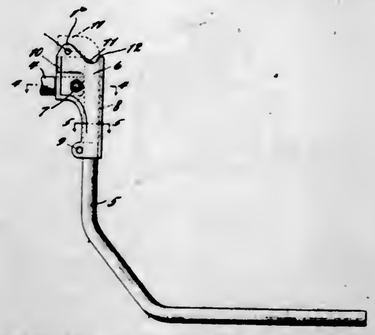
1. In a garter, a pad and leg-band parts formed from a single piece of material which is wider in its middle portion than at its ends and which is folded and secured to provide a pad reinforced at the back by folded portions of the blank, and parts extending upward and outward in opposite directions from the rear of the pad to provide portions of the leg-band.

1,351,568. LOCK FOR VEHICLE-DOORS. FRANKLIN H. HART, New Haven, Conn., assignor to C. Cowles & Co., New Haven, Conn., a Corporation. Filed Apr. 5, 1920. Serial No. 371,226. 3 Claims. (Cl. 70—91.)



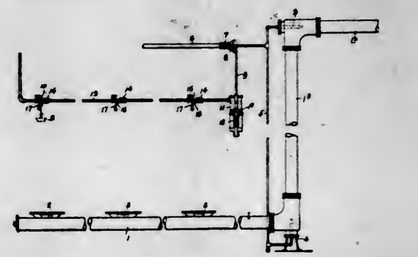
2. A lock for vehicle doors, comprising a handle provided with a shank and with a spindle, a transversely arranged key-operated locking-pin mounted in said shank, a hub connected with the handle, an escutcheon-plate coupled with the shank and adapted to be secured to the outer face of a vehicle door, said plate formed with locking-notches in the path of the said locking-pin, and with a forwardly projecting boss entering said hub, said plate formed with screw-holes whereby it may be secured in place, and the hub formed with a flange adapted to cover said screw-holes when the handle is in the locked position, and with clearance notches which will expose said holes when the handle is turned to an unlocked position.

1,351,569. POWER-OPERATED SHEARS. JESSE P. HEIL, Weeling, W. Va. Filed Jan. 2, 1920. Serial No. 348,826. 14 Claims. (Cl. 164—74.)



1. Shears comprising pivoted relatively reciprocable cutting blades, a flexible rotary power-transmission shaft, a worm driven by said shaft, a gear wheel adapted to be driven by said worm, means for shifting said worm into and out of driving relation to said gear wheel, a cam driven through rotation of said gear wheel, and means interposed between said cam and said blades whereby rotation of the former actuates the latter to oscillate.

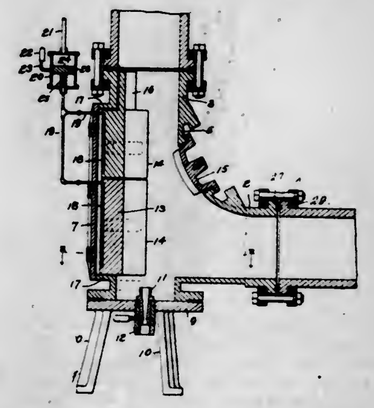
1,351,570. FINGER-BOARD ATTACHMENT. THOMAS J. HEWITT, Grand Forks, N. D. Filed Oct. 8, 1918. Serial No. 257,318. 1 Claim. (Cl. 84—87.)



The combination, in a musical instrument, of a fingerboard, strings extending along the fingerboard, said fingerboard being provided with grooves in the side faces thereof, and visual indicators arranged at intervals along the fingerboard, each of said indicators comprising an arched cross bar of spring metal provided at its ends with transversely extending clamping plates, said plates having their inner faces provided with ribs engaging the aforesaid grooves.

1,351,571. SHIP'S DAVIT. HARRY B. HILLS, Tompkinsville, N. Y., assignor to Steward Davit & Equipment Corporation, New York, N. Y., a Corporation of New York. Filed June 30, 1920. Serial No. 392,998. 1 Claim. (Cl. 9—22.)

In a ship's davit in combination with the boom, an operating screw, a crank, and a connection between the crank and screw comprising a socket fixed to the screw in which the crank is vertically movable, and said socket being provided with two recesses in either of which the end of the crank may be placed.

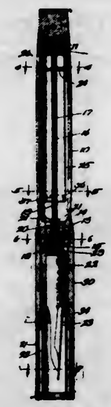


1,351,572. ASH-CONVEYER. JOHN M. HOPWOOD, Pittsburgh, Pa., assignor to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 11, 1917, Serial No. 174,038. Renewed Jan. 29, 1920. Serial No. 354,872. 4 Claims. (Cl. 193—10.)

1. In an ash conveying apparatus the combination of an open ended conduit having a plurality of spaced openings therein, a plurality of removable plugs for said openings, a nozzle for directing a jet of fluid under pressure into said conduit to establish a current of air therethrough, a valve controlling the flow of fluid to said nozzle, means for opening said valve, a plurality of means shiftable by the said plugs of the respective openings for controlling the valve operating means.

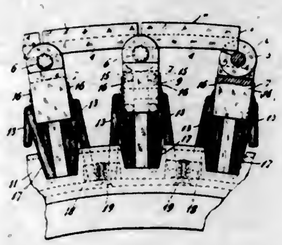
3. In an ash conveying apparatus the combination of an open ended conduit having a plurality of spaced openings therein, a plurality of removable plugs for said openings, a nozzle for directing a jet of fluid under pressure into said conduit whereby to establish a current of air through the conduit, a valve controlling the flow of fluid through said nozzle, a motor for normally holding said valve in closed position and adapted to be operated to open the valve by any of the plugs.

1,351,573. ASH-CONVEYER. JOHN M. HOPWOOD, Dormont, Pa., assignor to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1917, Serial No. 199,441. Renewed Jan. 29, 1920. Serial No. 354,873. 6 Claims. (Cl. 137—75.)



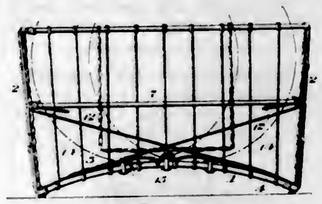
1. An elbow for an ash conveyer having in combination therewith a removable wearing block and means for indicating the cutting away of the block.

1,351,574. FOUNTAIN-PEN. CHARLES R. KEERAN, Chicago, Ill., assignor, by mesne assignments, to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1917. Serial No. 159,198. 17 Claims. (Cl. 120—46.)



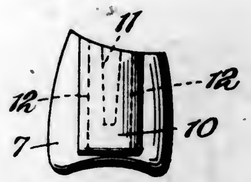
1. In a fountain pen, the combination of an elliptical casing the wall of which curves substantially from end to end of the casing, a pen, a feeding nib, an ink sack attached to said feeding nib, said ink sack being approximately of elliptical section similarly curving from end to end thereof, a flexible presser bar adapted to conform to the opposite curvatures of the casing wall, and a lever for operating said presser bar to deflate said sack.

1,351,575. FOUNTAIN-PEN. CHARLES R. KEERAN, Chicago, Ill., assignor, by mesne assignments, to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed June 11, 1917. Serial No. 174,040. 14 Claims. (Cl. 120—42.)



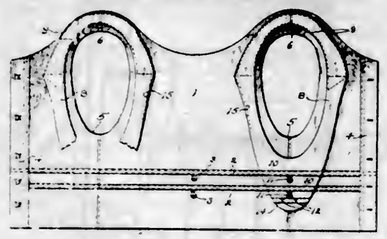
1. In a fountain pen, the combination of a casing, a valve seat at one end thereof, a valve having a stem extending longitudinally of the casing, a plug mounted in said casing and adapted to be moved longitudinally thereto, said plug having a projection extending into the interior of the casing, and means mounted on said valve stem and adapted to be engaged by said projection to manipulate said valve thereby when said plug is removed from the casing.

1,351,576. TIRE. ZACHARY KUTCHUK, Pittsburgh, Pa. Filed Apr. 3, 1919. Serial No. 287,274. 4 Claims. (Cl. 152—8.)



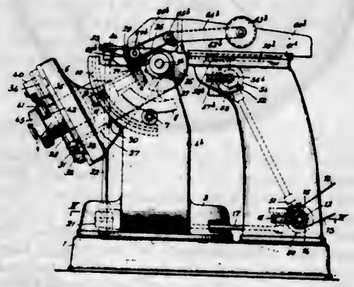
4. In combination, a flexible tread, brackets extending transversely of the tread and connected thereto, and pairs of coil springs of duplex type positioned adjacent the opposite sides of the respective brackets, said springs being secured at their intermediate portions to the annulus and at their ends to the brackets.

1,351,577. DISH DRIER AND HOLDER. ROSE LOMBARD, Cornelia, Ga. Filed Nov. 3, 1919. Serial No. 335,370. 2 Claims. (Cl. 141—11.)



1. A drier and holder for dishes having opposite outer sides or walls provided with dish-retaining means, said drier being provided with an upwardly bowed or arched bottom, and dish-engaging means located in the region of the bottom and adapted to engage the lower parts of dishes while the sides of said dishes are engaged by the dish-retaining means on the sides of the drier, said bowed or arched bottom being adapted to cause the dishes to gravitate toward the said outer sides or walls and thereby cause the dishes to be held by the dish-retaining means.

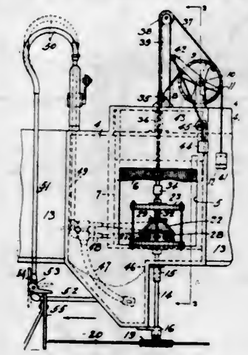
1,351,578. ARTIFICIAL TOOTH. GEORGE A. LOUQUE, New Orleans, La., assignor to Carmelite Louque, New Orleans, La. Filed Mar. 2, 1920. Serial No. 362,648. 3 Claims. (Cl. 32—9.)



1. In an artificial tooth the combination of a body portion, a longitudinal central groove extending from the upper end of said body to a point slightly beyond the transverse center thereof, channels formed on the front and rear face of the body and on each side of the groove, and a support having a portion that seats in the groove, and further having portions that are connected together by the first named portion; said last named portions being so constructed and arranged that they rest in the channels of the body portion.

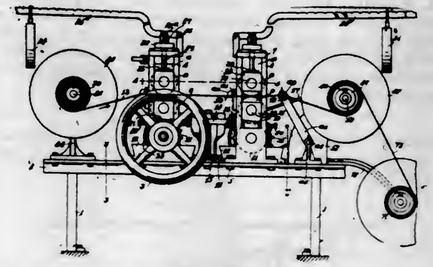
1,351,579. CHILD'S APPAREL-SUPPORTER. HARRIET MCELDOWNEY, Windsor, Ontario, Canada. Filed Sept. 14, 1918. Serial No. 254,060. 3 Claims. (Cl. 2—98.)

1. An apparel support comprising a body having arm holes and adapted to be secured about the wearer, annular oval-shaped supporting members each having an arm hole of greater dimensions than the arm holes of the body, said members being secured to the body throughout the portions thereof which extend over the shoulders of the wearer and downwardly to points midway of the arm holes in the body, said portions of said members which are secured to the body being positioned at a distance from the upper portion of the arm holes of the body to rest well upon the shoulders of the wearer and the unsecured portions of said members being free below the lower portions of the body arm holes to swing independently of the body, and means on the lower end portions of said members beneath the arm holes for the attachment of garments thereto.



1,351,580. MACHINE FOR GENERATING BEVEL-GEARS. MAX MAAG, Zurich, and RICHARD FREY, Höngg, near Zurich, Switzerland. Filed Jan. 30, 1920. Serial No. 355,143. 13 Claims. (Cl. 51—52.)

1. A machine for generating the teeth of bevel wheels, comprising a movable table, a blank carrier adjustably mounted on said table, means adapted to move said table together with the blank carrier around an axis passing through the vertex of the pitch cone of the blank, means adapted to rotate the blank around its axis, the last mentioned means being operatively connected by means of a vertical shaft and flexible bands to said means adapted to move the table, means for varying the speed of said movement of the blank-shaft relatively to the speed of the movement of the table and means to move the tool-carrying rams in such a way that the tools reciprocate along apex lines of the convex surface of the pitch cone.



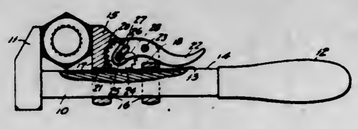
1,351,581. SAND-BLAST MACHINE. CHARLES F. MOTZ, Monaca, Pa. Filed Nov. 21, 1919. Serial No. 339,674. 7 Claims. (Cl. 51—4.)

4. Sand blasting apparatus comprising a compartment having an opening for the insertion of the ware to be sand-blasted, a rotary ware-support in said compartment, means for rotating said ware support, sand-blasting means, a vertically movable pattern-carrier, a rope connected to said pattern-carrier, a sheave engaged by said

rope, a rock-shaft, sheaves on said rock-shaft, a door for said opening, a cable connected to said door passing over one of said sheaves, weights connected to said cables, an arm on said rock shaft, and a cam in the path of said arm.

1,351,582. RIBBON-INKING MACHINE. HENRY G. MUTSCHLER, Rochester, N. Y., assignor to A. & H. G. Mutschler, Inc., Rochester, N. Y., a Corporation. Filed Sept. 30, 1919. Serial No. 327,505. 18 Claims. (Cl. 91—50.)

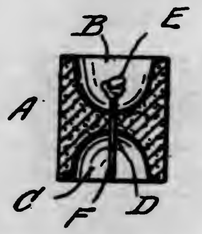
1. A bichrome ribbon inking machine comprising two inking mechanisms arranged to ink opposite edges of a ribbon fed through the machine, said mechanisms operating on the ribbon at two spaced points, in the direction of the length of the ribbon.



9. A bichrome ribbon inking mechanism comprising two pairs of rollers between which the ribbon is caused to travel, said rollers operating upon the ribbon at two spaced points and having their active sections out of alinement, and two scrapers operating on one roller of each pair at the end of such roller nearer the center of the ribbon.

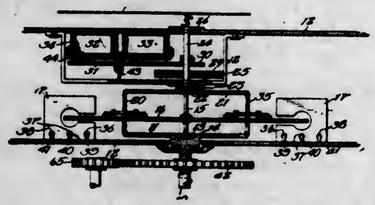
12. A ribbon inking machine comprising a feeding roller, a pair of inking rollers having bearing blocks adjustable toward and from the feeding rollers, the upper roller being free to move toward the lower roller and wedge members arranged to effect the movement of the lower bearing blocks on the guides in order to effect a simultaneous movement of both inking rollers toward and from the feeding roller.

1,351,583. WRENCH. JAMES B. NEWLON and CHRISTIAN BACKINGER, Seattle, Wash. Filed Sept. 25, 1919. Serial No. 326,120. 2 Claims. (Cl. 81—133.)



2. In a wrench, the combination of a stationary jaw, a shank therefor having teeth on one side of the same, a chambered block slidably fitted at both of its ends to

said shank and serving as a movable jaw, said block being provided interiorly with teeth, a spur wheel carried by said block and in continuous mesh with the

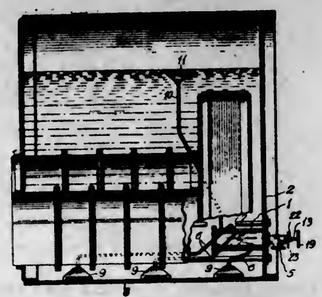


shank teeth, and a means for adjustably moving said wheel parallel with said shank to effect the engagement or disengagement selectively of the wheel teeth with or from the block teeth.

1,351,584. DENTAL MOLD-CUP. CHARLES A. PALMER, Seattle, Wash. Filed Nov. 26, 1919. Serial No. 340,893. 2 Claims. (Cl. 22—97.)

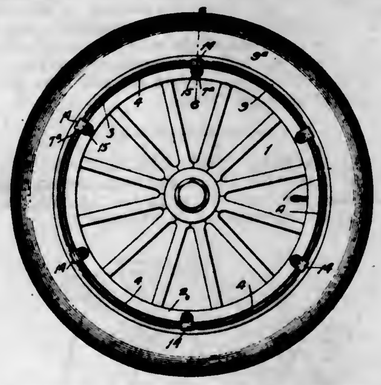
1. A dental mold-cup consisting of a cylindrical body made of porous material having water absorbent characteristics, said cup being provided in each end with a conoidal cavity which cavities are communicatively connected by a small hole wherein a sprue wire can be supported by the cup structure.

1,351,585. SPEEDOMETER. ARTHUR F. POOLE, Chicago, Ill. Filed May 5, 1917. Serial No. 166,613. 12 Claims. (Cl. 121—21.)



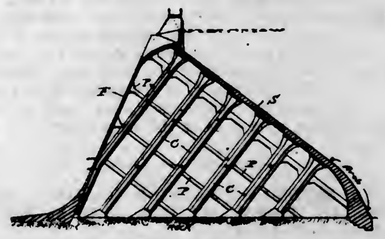
1. In an automobile speedometer, the combination of means for producing polyphase pneumatic impulses, means for translating said impulses into a rotary motion, and means to measure said rotary motion.

5. In an automobile speedometer, the combination of a framework, an element rotating proportional to the speed to be measured, pneumatic means adapted to rotate said element proportional to the speed to be measured, means to establish a magnetic field mounted on said framework, means for rotating a conducting element in said magnetic field proportional to the speed to be measured, and means for measuring the torque necessary to rotate said conducting element.



1,351,586. BLOW-OFF FOR BOILERS. GEORGE PURVIS, Port Huron, Mich. Filed June 7, 1918. Serial No. 238,799. 10 Claims. (Cl. 122—381.)

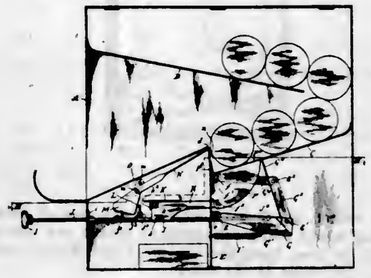
1. A blow-off for boilers comprising a selective valve having a plurality of distributed nozzles and an outlet having its axis alined with the valve axis, a controllable closure for the outlet and positioned to be located within the boiler when the blow-off is in position, and means for



controlling the movements of the valve and closure, said means being positioned to be accessible externally of the boiler when the blow-off is installed.

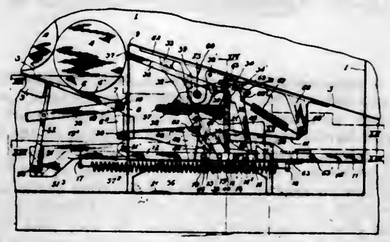
1,351,587. WHEEL AND DEMOUNTABLE-RIM CONSTRUCTION. JOSEPH STUNGO, New York, N. Y. Filed Apr. 12, 1919. Serial No. 289,723. 5 Claims. (Cl. 152—21.)

1. The combination with a wheel, of a demountable tire-carrying rim composed of two circumferentially-split parts, releasable means bridging said split parts and connecting the same together, wedging means movable to engage and lock said releasable connecting means against releasing movement and simultaneously to frictionally engage the said rim and wheel to secure the same together and means on the wheel for moving the said wedging means into said locking and frictional engagements.



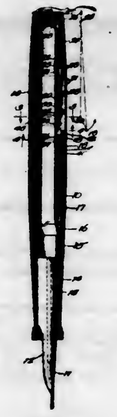
1,351,588. CONCRETE DAM. CLAUDE A. P. TURNER, Minneapolis, Minn. Filed Nov. 23, 1918. Serial No. 263,855. 5 Claims. (Cl. 61—32.)

1. In a dam, the combination of an inclined concrete slab forming the upstream face, and inclined separated,



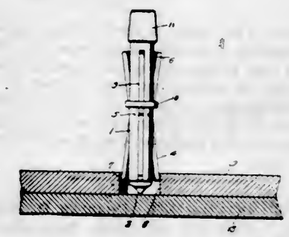
slab supporting column piers, said slab having reinforcements extending over the columns and throughout the slab, between the columns, and situated in the upper part of the slab at the columns, and in the lower part of the slab between columns, all such reinforcement being situated between the upper and lower faces of the slab, and the ratio of slab thickness to span between piers being such as to secure flat arch and flat dome action.

1,351,589. VENDING-MACHINE. JOHN VONS, Cleveland, Ohio. Filed July 2, 1917. Serial No. 178,238. 2 Claims. (Cl. 194—1.)



1. In a vending machine for vending articles in circular containers, the combination with the casing, of an inclined plane adapted to support said containers, a movable member forming a continuation of said inclined plane, a swinging latch pivoted to the casing above the coin slot and having a rod extending to the lower end of the inclined plane and adapted to come in contact with the lowermost container, whereby the weight of the container forces the swinging latch clear of the slot, and the weight of the latch causes it to close the coin slot when the casing is empty, substantially as and for the purpose specified.

1,351,590. VENDING-MACHINE. JOHN VONS, Cleveland, Ohio. Filed June 5, 1919. Serial No. 301,983. 10 Claims. (Cl. 194—80.)

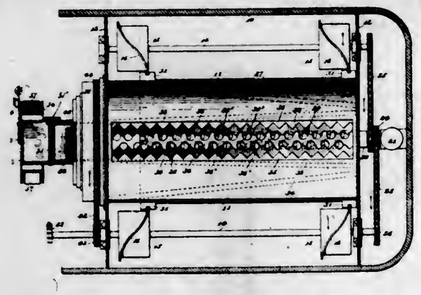


1. In a vending machine, a coin operated mechanism, comprising a coin chute, a pivoted coin retaining frame disposed adjacently to the lower parts of the sides of the coin chute, an operating plunger shiftable transversely across the lower end of the chute, and a frame carried by said plunger provided with a plurality of horizontally disposed levels adapted to coöperate with said retaining frame to release coins therefrom at different positions of the plunger.

1,351,591. FOUNTAIN-PEN. JOHN C. WAHL, Chicago, Ill., assignor, by mesne assignments, to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 27, 1917. Serial No. 188,335. 8 Claims. (Cl. 120—46.)

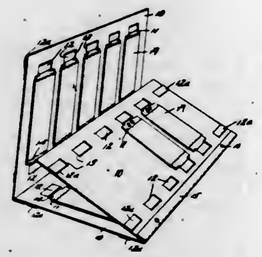
2. In a self filling fountain pen, the combination of a pen casing and a slot therein, and a lever pivoted in said slot, said lever being composed of an outer shell having a pair of operating lugs inserted therein.

1,351,592. CENTERING-PUNCH. HARRY M. WALKER, Ellenton, S. C. Filed Nov. 29, 1919. Serial No. 341,555. 5 Claims. (Cl. 33—191.)



1. A centering punch comprising a body having at one end a point and at the other a head, and having longitudinally extending grooves spaced apart from each other, a blade of angular formation pivoted in each groove, each blade consisting of a relatively long portion and a relatively short portion extending at an obtuse angle with respect to each other, said short portions extending toward the engaging end of the punch, a spring normally pressing the long portion of each blade away from the body, and a collar movable on the body and the blades for operating the blades.

1,351,593. COAL-HANDLING MACHINE. EDWIN N. WEAVER, Jersey City, N. J. Filed May 24, 1919. Serial No. 299,596. 3 Claims. (Cl. 83—52.)



2. In a coal machine the combination of a bottom, a plurality of pairs of crushing jaws beneath said bottom, the jaws of each pair being movable toward and from each other, a crusher actuator beneath the jaws, and means to operate the actuator, connections between the

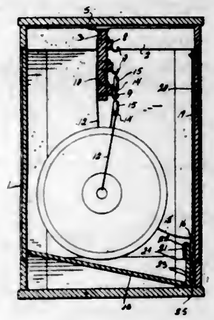
actuator and the jaws to cause reciprocation of the jaws of one pair in directions opposite to that in which the

other jaws reciprocate, the actuator being moved in directions perpendicular to the directions of the movement of the jaws.

1,351,594. SAMPLE-CARD. ABRAHAM WEINBACH, Brooklyn, N. Y. Filed Apr. 21, 1920. Serial No. 375,609. 1 Claim. (Cl. 211—34.)

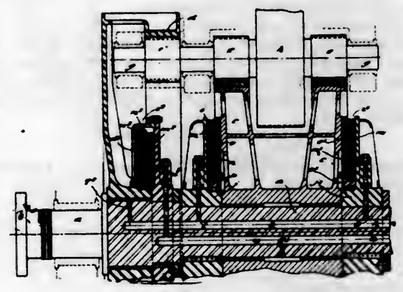
A sample card including a sheet having pairs of slits in two approximately parallel series, separate strips laced through said slits alternately to the opposite sides of the sheet, the ends of said strips being pasted to the sheet while the intermediate areas at the opposite sides of the sheet are free from the latter, and sample-carrying tabs having tongues at the opposite ends thereof receivable beneath said strips.

1,351,595. SPINNING-RING. CHARLES D. WHITE, Norwich, Conn. Filed Oct. 21, 1919. Serial No. 332,225. 5 Claims. (Cl. 118—59.)



1. A spinning ring having a base lying in a substantially horizontal plane, and a raceway disposed angularly thereto, and flared from its lower edge outwardly toward its upper edge, said edges projecting above and below the plane of the base.

1,351,596. RECORD-CABINET. HAROLD A. WIBERG, New York, N. Y. Filed Oct. 8, 1919. Serial No. 329,307. 10 Claims. (Cl. 211—16.)

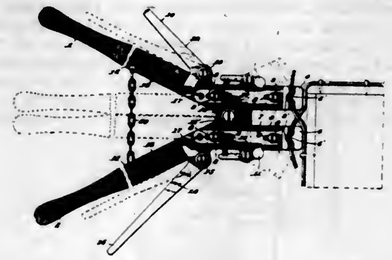


8. The combination with a record receiving chamber having an inclined bottom, of a support in the upper part of the chamber and a plurality of individual means for suspending a plurality of records spaced above said inclined bottom, each of said means being detachable to release its respective record to permit it to roll upon the bottom to the front of the cabinet.

9. The combination with a record receiving chamber provided with an inclined member, of a plurality of means for suspending a plurality of records in parallel planes at right angles to said inclined member with their marginal

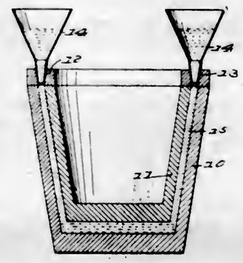
edges spaced above said member, any one of said suspending means being releasable to permit any one of the records to drop upon the roll down the inclined member toward the front of the chamber.

1,351,597. POWER-TRANSMISSION TOOTHED GEARING. BERNARD R. WINGFIELD, West Drayton, England. Filed Aug. 6, 1918. Serial No. 248,639. 2 Claims. (Cl. 74—59.)



1. A reducing gear for driving a shaft in either direction of rotation from a shaft rotating continuously in one direction, comprising a wheel having external teeth and a wheel having internal teeth both mounted on the shaft to be driven, pinions on the driving shaft gearing with the said toothed wheels, the gears on one of the shafts being fast on that shaft while the co-acting gears on the other shaft are mounted freely thereon, hydraulically operated clutches adapted to couple the free gear wheels alternately to their shaft, and valve gear controlling the operation of the clutches and the supply of a lubricating fluid film to the gear wheels, substantially as described.

1,351,598. PORTABLE HAND-TOOL FOR STRETCHING, TIGHTENING, AND TWISTING THE FREE ENDS OF WIRE LENGTHS. CLARENCE E. WISE, Washington, D. C. Filed Nov. 12, 1918. Serial No. 262,112. 11 Claims. (Cl. 140—121.)



1. A tool of the character described, comprising pivoted members, each member having a rigid jaw at one end

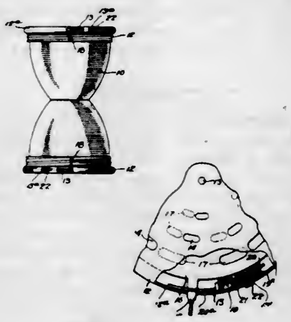
thereof, and a longitudinally slidable member secured to each pivoted member having a clamping jaw at one end,

each slidable member being adapted to move forwardly and rearwardly.

1,351,599. ART OR METHOD OF CASTING ARTICLES OF CLAY. FRANKLYN J. WOLFF, Trenton, N. J. Filed July 25, 1918. Serial No. 246,733. 9 Claims. (Cl. 25—156.)

1. The method of molding clay articles which contemplates the exposure of opposite surfaces of the molded mass to the simultaneous effect of media having moisture absorbent characteristics of substantially equal capacity throughout the area of said surfaces.

1,351,600. GAGE. ORLO L. WOOD, Lansing, Mich. Filed June 19, 1920. Serial No. 390,228. 2 Claims. (Cl. 101—414.)

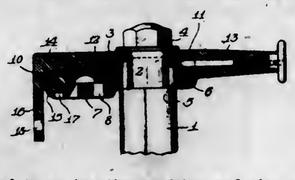


2. The combination with an automatic feeding mechanism for printing presses having a rotary finger holder, of a finger including a flat body secured in the holder, said finger having its outer end bent upon itself to provide transverse projections and depressions to form the said body with a jaw, the outer end of the jaw being reduced and rounded to the sides thereof and beveled from its edge to the opposite faces thereof, a second jaw having its inner end fixed to the body and overlying the first mentioned jaw, said second mentioned jaw comprising a strip which is corrugated transversely to provide intersecting projections and depressions the depressions of the last mentioned jaw designed to receive the projections of the first mentioned jaw therein, the last mentioned jaw having its end flared upwardly to provide a rod which is reduced and rounded from its end to its sides and which has its opposite faces beveled inwardly from its edges.

1,351,601. OIL-ABSORBING DEVICE. ALIDA E. ALLEN, Brooklyn, N. Y. Filed Oct. 31, 1919. Serial No. 334,714. 1 Claim. (Cl. 112—256.)

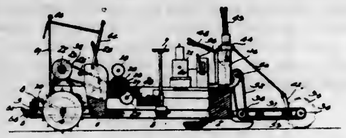
An oil absorbing device comprising an elastic core of substantially circular form provided with a central opening adapted to receive the article to which the absorbing device is attached, and a wrapping inclosing said core and wound about the same through its central opening, said wrapping providing an absorbent covering for the core.

1,351,602. SALT AND PEPPER SHAKER. RAGNAR ANDERSON, Sheridan, Wyo. Filed May 11, 1920. Serial No. 380,630. 2 Claims. (Cl. 65—45.)



1. A condiment holder comprising a shell divided transversely into two compartments which are similar, a cap detachably engaged upon each end of the shell and provided in one side with a slot, the cap being further provided with a plurality of series of arcuate slots, a disk disposed against the inner side of each cap and pivotally connected therewith for rotatable movement, the disk being provided with a plurality of series of arcuate slots adapted to be brought into registration with said first named slots, a lug extending from the disk and passing through said first named slot, an apertured guide carried by the cap, a rod connected with the lug and slidable through said guide, a coil spring surrounding the rod between the lug and guide, and said guide being adjustable to limit the movement of said lug and consequently said disk, varying the degree of registration of the arcuate slots.

1,351,603. HINGE AND LOCK FOR STEERING-WHEELS. WILLIAM H. APPLEBY, Windsor, Ontario, Canada. Filed Aug. 1, 1919. Serial No. 314,659. 8 Claims. (Cl. 74—33.)



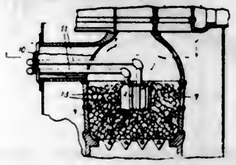
5. The combination of a steering post, a disengageable and removable steering wheel adapted for operation on said post, and means including a pin fixed relative to the

post and a barrel carried by the wheel establishing a connection between said post and wheel so that said wheel

may be tilted to an inactive position and also completely removed from the post.

1,351,604. ICE-HARVESTING MACHINE. DANIEL APPLEGATE, Port Clinton, Ohio. Filed Nov. 18, 1918. Serial No. 262,999. 2 Claims. (Cl. 262—20.)

1. In an ice harvesting machine of the class described, a frame adapted to move over the ice to be cut, ice saws swingingly mounted on said frame, a series of levers corresponding to the saws for raising or lowering each of the same independently of one another, a shaft common to said levers and mounted on the frame, and means for actuating said shaft to thereby shift the saws through the said levers regardless of the position of any one of the same.

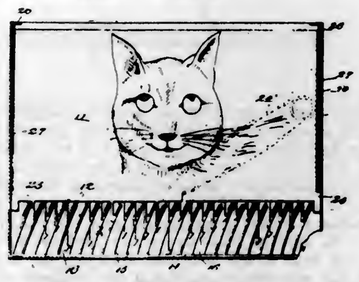


1,351,605. TRAFFIC-SIGNAL FOR VEHICLES. ROBERT L. ATWELL, Beloit, Wis. Filed May 24, 1919. Serial No. 299,419. 5 Claims. (Cl. 116—48.)

1. In a vehicle carried traffic signal, a signal supporting member, a direction indicating and pointing member having an articulated connection with said supporting member adapting it to be swung in a vertical plane in line with the direction of movement of the vehicle and also in a vertical plane at substantially a right angle to the direction of movement of the vehicle, and means for swinging said direction indicating member in either of said vertical planes, the last named means comprising a rockable element by which said indicating member is carried, including a push rod geared to said rockable element, and means including a cam device for rocking said element on an axis substantially at a right angle to its major axis, and a manually operable element controlling both of the last named means.

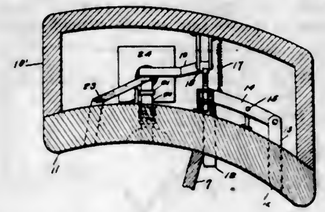
1,351,606. WATER-HEATER FOR FURNACES AND THE LIKE. ALBERT W. BACHMANN, Laporte, Ind. Filed Aug. 6, 1917. Serial No. 184,673. 1 Claim. (Cl. 122—20.)

In a structure of the class described, a water heater adapted to be arranged in either a vertical or horizontal position within a fire pot, comprising a hollow body formed of a single piece, said body having approximately flat end walls, one of which is formed with a pair of spaced openings for the connection thereto of either pipes or plugs, and side walls formed of a plurality of longitudinal hollow ribs disposed in a circular series to provide narrow flue spaces between the ribs, and another longitudinal hollow rib of greater width and diameter than the other ribs and offset therefrom at one side and having its outer wall provided with a pair of openings for the connection



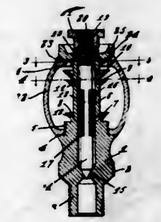
thereto of either pipes or plugs, said openings being located near the top and bottom of the body, the inner one of the two openings in the end wall being located at one end of the body where the plurality of hollow ribs are provided and substantially in the longitudinal center of said ribs, the other of said openings being provided at the end of the rib of greater width and diameter and adjacent to the top opening therein, whereby the water circulating pipes may be connected to the body in a plurality of different ways and air pockets within the heater body are eliminated.

1,351,607. ROAD OR PAVEMENT. JAMES V. BARRETT, Bordentown, and THOMAS J. BARRETT, Fieldsboro, N. J. Filed May 1, 1919. Serial No. 293,965. 14 Claims. (Cl. 238—5.)



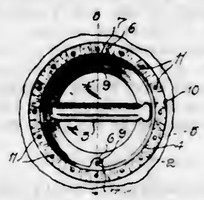
1. A concrete roadway or pavement having a recess extending lengthwise of the wear surface of the same and of substantially uniform depth, a filling of asphaltic, bituminous, or tarry paving material in said recess, and metallic reinforcing strips interlocked with said paving material; the projecting ends of said metallic reinforcing strips being embedded in the body of the road.

1,351,608. EDUCATIONAL TOY. WALTER M. BARRY, New York, N. Y. Filed Mar. 20, 1920. Serial No. 367,355. 14 Claims. (Cl. 35—9.)



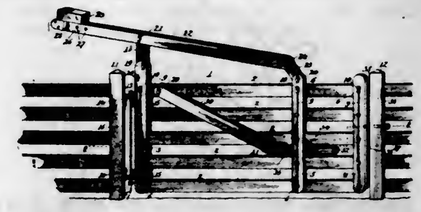
1. A device as characterized, including a casing, a plurality of projectable picture embodying panels, normally concealed within said casing, an operable key-board including spring pressed lettered keys embodying the alphabet permanently located on said casing, and means operable through the use of said key-board to expose a particular panel by permitting the same to move step by step.

1,351,609. COIN-CONTROLLED DOOR. WILLIAM JAMES BISHOP, Collingwood, Ontario, Canada, assignor of one-half to John J. Quilty, Collingwood, Canada. Filed July 9, 1919. Serial No. 309,652. 2 Claims. (Cl. 194—74.)



1. A device of the character set forth including a rotating door, a lock casing, a substantially U-shaped member pivoted within said casing and having one arm engaging the door to lock the same against rotation and its other arm held in a retracted position, tension means connected to the substantially U-shaped member, a locking means engaging the substantially U-shaped member, a push button in said casing, and a coin chute in said casing conveying a coin to a point for permitting the push button to actuate the locking means.

1,351,610. VACUUM OIL-CUP. HARRY F. BLOOM, Toledo, Ohio. Filed Apr. 21, 1920. Serial No. 375,563. 3 Claims. (Cl. 184—70.)

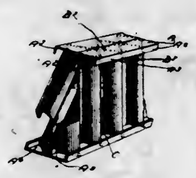


2. In a vacuum oil cup a neck having a valve seat therein and an outlet nipple, a tubular stem projecting from the neck and having an annular shoulder, there being ports extending from the shoulder and into the stem, a valve adjustably mounted in the stem and adapted to engage the seat, one end of the valve projecting beyond the stem and body, a lock nut engaging said valve and adjustable against the stem, and a cover adjustably engaging the stem and movable toward and away from the body to close and open said body, said lock nut constituting means for holding the cover against removal from the cup.

1,351,611. SANITARY MILK-CAN COVER. MARY A. BLOSSER, Bever township, Mahoning county, Ohio. Filed Nov. 24, 1919. Serial No. 340,142. 6 Claims. (Cl. 220—24.)

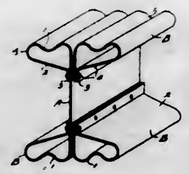
1. A protecting device for milk can covers comprising a ring, means for fastening the same to the cover, and a sheet of flexible material fastened to said ring and adapted to be held against the circumference of the can neck.

1,351,612. GATE. MARK HARRIS BODLEY, Tyrone, Pa. Filed Oct. 2, 1919. Serial No. 327,843. 4 Claims. (Cl. 39—13.)



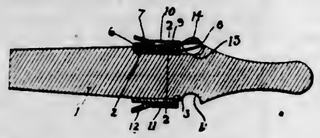
1. A gate formed of a series of longitudinal bars in superposed order, end posts connecting the bars and to which the latter are pivoted, an intermediate post also connecting the bars and to which the latter are pivoted, other bars extended in the direction of the length of the gate with one bar slidable lengthwise of the gate between two adjacent longitudinal bars and traversing the intermediate post and there provided with perforations for the reception of a stop pin to engage the intermediate post and thereby hold the gate in either a level or different tilted positions.

1,351,613. COLLAR-BAR. ALBERT BROWN, New York, N. Y., assignor of one-third to Max Jacob Grauer and one-third to Joseph Lipschutz, New York, N. Y. Filed Apr. 13, 1920. Serial No. 373,678. 3 Claims. (Cl. 24—81.)



1. A collar bar having clamps at the ends thereof, each clamp comprising front and rear elements, one of said elements of each clamp having the end portion thereof return bent presenting an elongated member extending laterally inward along and in close contact with the opposed inner surface of the coacting clamp element, there being clearance space laterally inward from said returned member and said contacting surfaces.

1,351,614. GIRDER AND THE LIKE FOR AIRCRAFT. EDWARD EUGENE BROWN, Streatham, London, England. Filed Jan. 26, 1918. Serial No. 213,980. 11 Claims. (Cl. 189—37.)

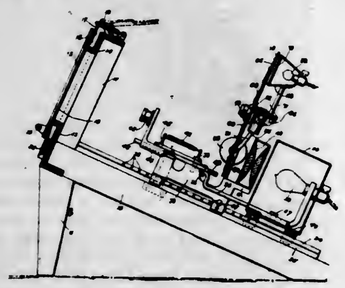


1. In a girder, a pair of members having inner flanges disposed side by side and outer flanges, a second pair of members having inner flanges disposed side by side and outer flanges, the second mentioned members being spaced from the first mentioned members, two panels, each provided with ribs, and having their sides disposed at the inner flanges, means to secure the sides of the panels and the inner flanges together, and means to secure the ribs on the panels to the outer portions of the outer flanges.

1,351,615. METAL CONSTRUCTION. EDWARD EUGENE BROWN and DERMOT JOSEPH MOONEY, London, England. Filed Jan. 28, 1920. Serial No. 354,722. 2 Claims. (Cl. 189—37.)

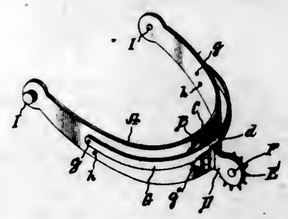
1. A metal spar, comprising a web, and hollow flanges at both sides of the web at both longitudinal edges thereof, said hollow flanges having straight inclined inner portions and curved outer edges, and the outer portions of said flanges having a compound curvature transversely.

1,351,616. PEG FOR VIOLINS AND THE LIKE. WILLIAM J. BURKE, San Francisco, Calif. Filed Mar. 16, 1920. Serial No. 366,247. 3 Claims. (Cl. 84—304.)



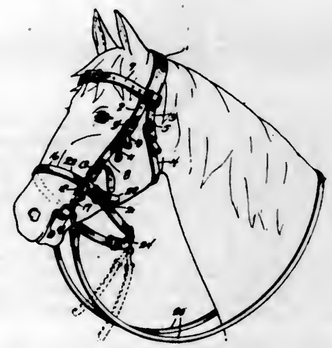
3. The combination with a sleeve having an interior series of ratchet teeth, of a peg insertible into the sleeve and having a longitudinal channel, a band extending around the peg and having inturned ends seated in the channel to hold the band against displacement, a pin connecting said ends and within the channel, a folded spring strip pivotally mounted on the pin, one end portion of said strip constituting a yielding support for the balance of the strip, an outturned portion upon said strip for engaging the teeth in the sleeve to hold the peg against rotation in one direction, and a finger piece upon the fold portion of the strip and yieldingly supported outside of the channel.

1,351,617. PRODUCT IMITATING CHINA. CARLOS BUTTY and FLORENCIO ALVO, Buenos Aires, Argentina. Filed June 18, 1919. Serial No. 304,979. 2 Claims. (Cl. 106—24.)



1. A composition for forming articles in imitation of china, consisting of sulfur 40%, clay and cement 60%, and a coloring matter.

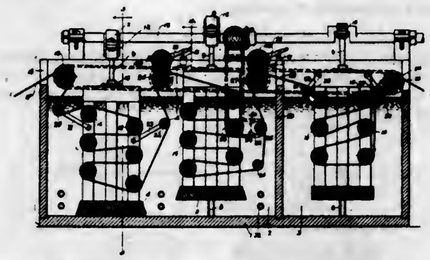
1,351,618. OPTICAL PRINTER. HAGAR BOLTON BYRON, New York, N. Y. Filed Mar. 8, 1919. Serial No. 281,417. 3 Claims. (Cl. 88—24.)



1. In a machine of the character set forth, the combination of a frame, a guide bar extending across the lower portion of the frame, means to adjust and hold the bar at any desired elevation with respect to the focal axis of the frame, a plurality of fingers carried by and adjustable with the bar for accurately receiving and holding sheets of print paper, and a platen movable toward and from the frame into direct contact with the paper and having grooves to receive said fingers without obstruction.

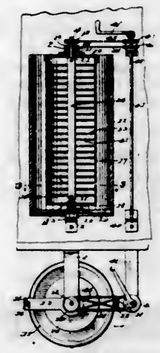
1,351,619. SPUR. LOPE VICENTE CALDERÓN, La Ceiba, Honduras. Filed Apr. 26, 1920. Serial No. 376,817. 6 Claims. (Cl. 54—83.)

1. In a spur the combination with a U-shaped heel plate adapted to engage the heel of the wearer, of a hinge plate secured to the rear thereof, a yoke hinged to said hinge plate, a rowel journaled in said yoke, and a guard plate pivoted to the exterior of said heel plate and adapted to lock said hinged yoke in the open or closed position.



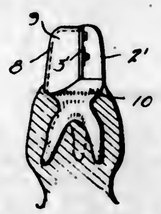
1,351,620. BRIDLE AND HALTER. SAMUEL CORNELIUS CANTER, Wilkesboro, N. C. Filed July 28, 1919. Serial No. 313,793. 1 Claim. (Cl. 54—6.)

A bridle comprising opposite cheek straps of different lengths, the shorter of the cheek straps having a snap hook suspended therefrom, a bit comprising a mouth piece and rings having a combined length equal to the length of the shorter of the said cheek straps, and a snap hook secured to the upper portion of the longer of the said cheek straps whereby one end of the said bit may be attached to the said snap hook for coöperating with the shorter of the said cheek bands to maintain the lower end of the cheek bands in substantially the same plane, and a nose band supported by the lower ends of the said cheek straps.



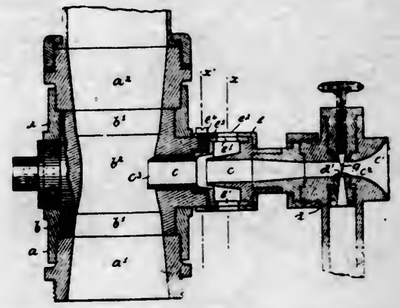
1,351,621. TEXTILE-FABRIC-TREATING MACHINE. LOUIS CLARENBACH, Passaic, N. J. Filed Aug. 5, 1919. Serial No. 315,552. 11 Claims. (Cl. 8—19.)

1. A machine for treating fabric in open width comprising a vat, a plurality of frames arranged in said vat, each of said frames carrying a plurality of rollers, means for guiding textile fabric in open width to the rollers, on said frames, and means for reciprocating said frames in



such a direction as to cause the fabric extending from one roller to the other to engage substantially flatwise the liquid in said vat.

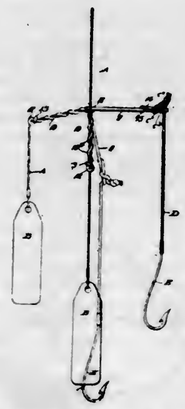
1,351,622. ICE-CREAM FREEZER. JOHN CLARK, Flint, Mich. Filed Oct. 17, 1919. Serial No. 331,304. 5 Claims. (Cl. 259—85.)



3. In a device of the character described, agitating means including a shaft composed of two sections one of which is rectangular in cross section and formed with a vertical groove in one face and with a plurality of horizontal grooves intersecting the vertical groove, a lug formed medially of the ends of the inner wall of each horizontal groove, the other section being plate-like in form, a vertical rib carried by one face of the plate-like section, a plurality of bars each having opposed recesses formed in its side edges medially of the ends, the bars being positioned in the horizontal grooves and the recesses being engaged by the lug and the rib when the sections are arranged together, and means for detachably fastening the sections together.

1,351,623. DETACHABLE TOOTH. CLAUDE ASTOLFO CONOVER, Newburgh, N. Y. Filed Jan. 8, 1920. Serial No. 350,079. 6 Claims. (Cl. 32—12.)

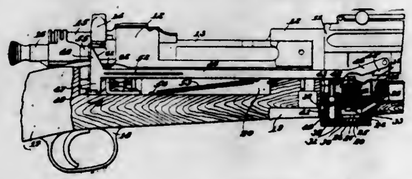
1. A removable tooth comprising a tooth structure, a supporting plate, and means for connecting the tooth structure with the plate so that the tooth structure will not move independently of the plate, said means including a snap fastener.



1,351,624. CARBURETER. ARTHUR COX, Olton, near Birmingham, England. Filed Mar. 1, 1919. Serial No. 280,127. 4 Claims. (Cl. 261—45.)

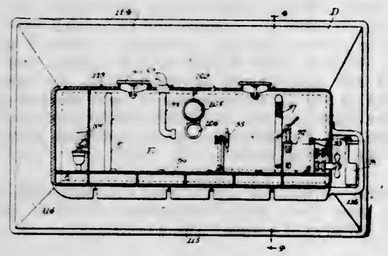
1. A carbureter for internal combustion engines, comprising a primary air branch or induction tube having an air intake; a fuel supply jet located in said branch; a main air passage into which the primary air branch leads; and an adjustable valve remote from said air intake adapted to admit air into said branch at the engine side of the jet for controlling the fuel supply.

4. A carbureter for internal combustion engines, comprising a primary air branch or induction tube; a fuel supply jet located therein; a main air passage into which the primary air branch leads; an adjustable air-admission valve located in said branch intermediate the fuel jet and the main air passage and embodying fixed and movable members having coöperating series of ports; and a throttle valve located in said passage and connected for simultaneous operation with the movable member of the air-admission valve, said movable valve member being initially adjustable relatively to the fixed member and independently of its operating movement with the throttle valve.



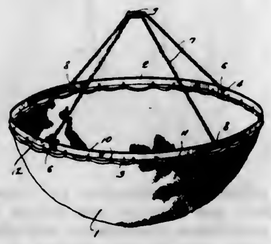
1,351,625. FISHLINE ATTACHMENT. MARTIN J. CROSBIE, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,971. 3 Claims. (Cl. 43—28.)

1. A line attachment comprising an elongated line-engaging member, and a lateral arm thereon at an end thereof, said attachment presenting a laterally disposed line-receiving open loop at the juncture of said line-engaging member and said arm and in a plane approximately at right angles to the line-engaging member, said



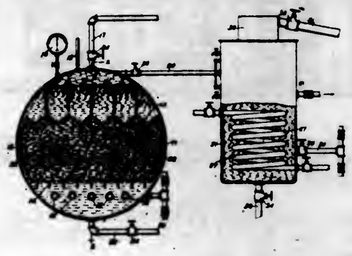
arm departing laterally from said loop so that one side of the loop is formed by said arm, whereby the attachment when a weight is imposed on the lateral arm will swing through an arc having its center directly at said loop and therefore directly at the inner end of the lateral arm.

1,351,626. GUN LUBRICATION. HENRY HAVELOCK CUMMINGS, Newton, Mass., assignor, by direct and mesne assignments, of one-half to John Taliaferro Thompson, Newport, Ky., and one-half to Thomas Fortune Ryan, New York, N. Y. Filed June 9, 1920. Serial No. 387,577. 15 Claims. (Cl. 42—1.)



1. In combination with a gun, a lubricant reservoir, means for pumping lubricant from the reservoir and outlet means adapted to discharge the lubricant upon cartridges in the gun magazine.

1,351,627. LIFEBOAT. GEORGE DORFFEL, West Seattle, Wash. Original application filed May 14, 1919, Serial No. 297,015. Divided and this application filed Sept. 10, 1919. Serial No. 322,773. 5 Claims. (Cl. 114—16.7.)

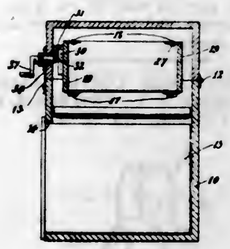


1. In combination, a submarine vessel, a life boat carrier mounted thereon, a life boat seated in said carrier, and flexible means exteriorly of the submarine and of the life boat for securing said life boat in position, said means being adjustable from within said submarine vessel and being releasable from within said life boat.

1,351,628. FISHING-NET. JAMES K. DUKAS, Edwardsville, Pa. Filed Apr. 4, 1919. Serial No. 287,442. 1 Claim. (Cl. 43—12.)

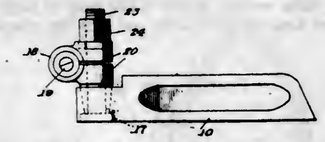
A device of the class described comprising a collapsible frame composed of jointed sections, a net carried thereby, supporting chains, one of which is permanently engaged with said frame, and the others having hooks detachably engaged therewith at their joints to hold the frame in expanded position.

1,351,629. APPARATUS FOR EXTRACTING RESIN AND ALLIED PRODUCTS. WILLIAM EDENBORN, New Orleans, La. Filed June 3, 1918. Serial No. 238,010. 10 Claims. (Cl. 203—6.)



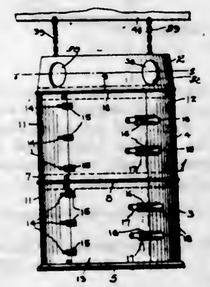
8. An apparatus as characterized embodying a tank for extracting in the form of a solution, the resin contained in wood particles; means for maintaining the solution above said wood particles; and means interposed between the body of said solution and said particles for collecting the resin and preventing the redeposit of the same on said particles.

1,351,630. GYROSCOPIC TOP. KARL EDISON, Spring Valley, N. Y., assignor to Harry E. Block, Spring Valley, N. Y. Filed Dec. 20, 1919. Serial No. 346,252. 6 Claims. (Cl. 46—32.)



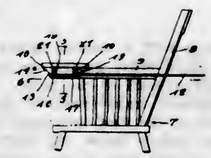
1. A top, including a plate, a cross-bar attached to and spaced from the lower face of said plate, a rotatably mounted fly wheel positioned intermediate said plate and cross bar, means for rotating such fly wheel, and a supporting point forming a part of such cross bar.

1,351,631. ASH-SIFTING DEVICE. ABRAHAM ELKINS, Bridgeport, Conn. Filed June 27, 1919. Serial No. 307,066. 4 Claims. (Cl. 83—60.)



1. An ash sifting device comprising a receptacle, a cover hinged thereto, a plurality of guide rods extending longitudinally thereof, a sifting element mounted for reciprocal movement on said guide rods, means for reciprocating said sifting element, and means carried by the hinged cover for guiding the sifting element in its reciprocal movement.

1,351,632. TOOL-HOLDER. OSWALD ENGELS, Flint, Mich. Filed Jan. 24, 1920. Serial No. 353,648. 2 Claims. (Cl. 29—98.)



1. A tool holder comprising an arm having an opening extending transversely through one end thereof, a bolt removably positioned in said opening, means for locking the bolt against rotary movement, a split clamping collar for receiving a tool, registering openings formed in the adjacent end of the collar to receive the bolt and a nut secured upon the threaded end of the bolt for clamping the tool and collar against movement.

1,351,633. FURNACE-CASING. CECIL L. EPPS, Van Wert, Ohio. Filed Feb. 8, 1916. Serial No. 77,050. 4 Claims. (Cl. 126—114.)

1. A furnace casing including relatively spaced horizontally disposed rings, upper and lower body portions embracing said rings, each body portion consisting of relatively spaced removable sections, and doors intermediate the said sections, means detachably connecting certain side edges of said doors to the side edges of one of said sections, and means adapted to be operated to detachably connect the other side edges of said doors to the side edges of the other of said sections, and to draw the doors and the sections into and hold them in close embracing engagement with said rings.

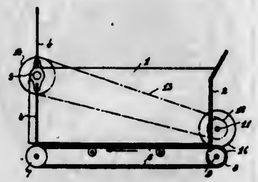
1,351,634. BABY'S CHAIR-TABLE. THEODORE ERNST, Bayfield, Wis. Filed Sept. 8, 1919. Serial No. 322,570. 7 Claims. (Cl. 155—127.)

1. The combination with a chair having a back, of a track supported by said chair and extending from the front portion past the said back, a table, means movably securing said table to said track so it can be moved thereabout from a position in front of said back to a position in rear of said back while remaining secured to the track, and supporting means on said chair to support the opposite end portion of said table in substantially horizontal position in front of and behind the said back.

1,351,635. AUTOMOBILE DIRECTION-SIGNAL. GEORGE ANDREW FORSBERG, New Britain, Conn. Filed Nov. 21, 1919. Serial No. 339,657. 14 Claims. (Cl. 40—132.)

1. A signal device comprising intelligible light-transmitting indicia arranged to impart intelligible signals, light-emitting means individual to each signal for differentiating one signal from another, and groups of laminæ individual to the signal indicia and located between the light-transmitting signal and the light-emitting means with the edges of the laminæ presented toward the indicia and toward the light-emitting means and of non-reflecting character, whereby the signal means may be used successfully either by daylight or at night.

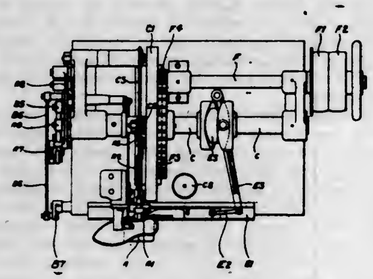
2. A signal device comprising a container with walls dividing the interior of the container into compartments separated optically one from the other, each compartment containing light-emitting means, a front wall with light-transmitting indicia therein grouped to display an intelligible signal, and groups of laminæ in and individual to compartments interior to the outer wall and related to the light-emitting means to prevent the reflection of light entering the indicia from the outside through said indicia to the outside.



3. A signal device comprising a container with walls dividing the interior of the container into compartments separated optically one from the other, each compartment containing light-emitting means, a front wall with light-transmitting indicia therein grouped to display an intelligible signal, and groups of laminæ in and individual to the compartments interior to the outer wall and related to the light-emitting means to prevent the reflection of light entering the indicia from the outside through said indicia to the outside, the laminæ being in superposed spaced horizontal position when installed, and having the surfaces substantially non-reflective.

4. A signal device comprising a container with optically distinct compartments therein, a front or cover with light-transmitting indicia representing intelligible signals and each individual to a compartment, and a group of non-reflective spaces and substantially parallel laminæ adjacent to the inner face of the cover and projecting toward the source of light in, and each group being individual to, the compartment, whereby the signal may be caused by the energization of the light source either in daylight or at night.

5. A signal device comprising a container with interior division walls separating the container in optically distinct compartments therein, light-emitting means in each compartment individual thereto, and cover means for the compartments in the form of a plate with light-transmitting indicia therein providing intelligible signals, said plate having on its rear face groups of closely adjacent



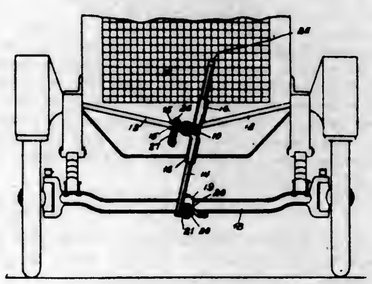
spaced laminæ projecting perpendicularly and individual to the indicia between the cover means and the light-emitting means in each compartment.

1,351,636. DEVICE FOR PERIODIC EMPTYING OF RECEPTACLES. OLOF FRANKMAN, Malmö, Sweden. Filed Oct. 25, 1919. Serial No. 333,337. 1 Claim. (Cl. 214—83.)

A device of the character described comprising, a receptacle having opposite closed sides, a rear closed end, a forward open end and an open bottom; an endless conveyer arranged beneath the receptacle to cover its open bottom and having its upper run traveling toward the open forward end of the receptacle; a transverse shaft arranged above and spaced from the endless conveyer and disposed near and within the forward ends of said sides, a pair of radial gates carried by the shaft and arranged in diametrical relation, each gate being adapted to assume a vertical position within the open end of the receptacle to close the same while the other gate is disposed wholly exteriorly of the receptacle, and gearing connecting said shaft and endless conveyer to cause them to move in unison whereby the endless conveyer is adapted to completely discharge the material from the receptacle by the time the gate reaches the vertical closed position.

1,351,637. SEWING-MACHINE FOR PLAITED-SOLED SHOES. NORMAN FRASER, JOHN FRASER, and GORDON SCOTT FRASER, Arbroath, Scotland. Filed Sept. 24, 1918. Serial No. 255,511. 2 Claims. (Cl. 112—36.)

1. In a machine for sewing uppers to jute or like soles to form shoes, in combination a vertically reciprocated sewing needle, an inclined work table to receive the sole and upper so positioned that the needle enters the edge of the sole diagonally and passes through the sole inward and toward the center thereof, a vertically reciprocated spiked bar adapted to pierce the sole in a direction opposite to that in which the needle enters, and a spiked roller at substantially the same inclination as the work table and adapted to feed the sole forward between successive stitches, as set forth.

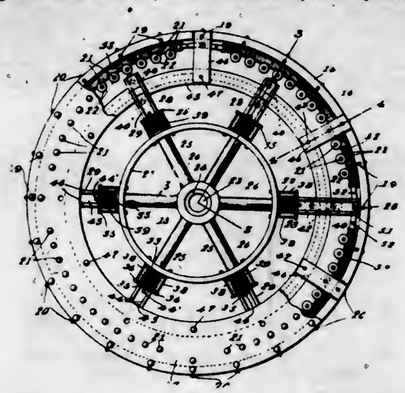


1,351,638. BROOM-HOLDER. GEORGE GENTSLINGER, Wapakoneta, Ohio. Filed Jan. 24, 1920. Serial No. 353,711. 1 Claim. (Cl. 15—19.)

A broom holder comprising metallic straps connected together at one end to form a point, portions of said straps being diverged and projected downwardly to overlie the upper end and opposed edges of a broom, a rigid confining band shaped to fit about the broom and secured to said metallic straps above their lower free ends, a semi confining band secured to the lower ends of said metallic straps and adapted to embrace one-half the broom, and a

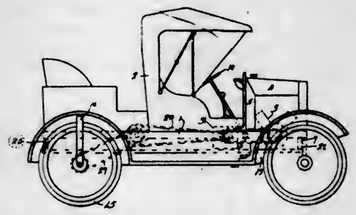
supplemental frame including a semi-confining strap to encircle the broom head opposite said semi-confining band and extensions from said semi-confining strap pivotally connected to the metallic straps, and means connecting these semi-confining band and semi-confining strap to vary the clamping coöperation between said parts.

1,351,639. CRANK. ZACHRIAH E. GILLEY, Lamasco, Tex. Filed Sept. 27, 1919. Serial No. 326,937. 2 Claims. (Cl. 74—33.)



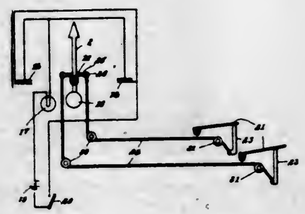
1. The combination with a vehicle having an internal combustion motor, of a shaft having an operative connection with the crank shaft of the motor, a crank arm carried by and disposed transversely of and extending upon opposite sides of the first mentioned shaft and a trip secured to the vehicle below the shaft and in the path of movement of both ends of the crank arm.

1,351,640. WHEEL CONSTRUCTION. RASEY J. GOODSON, Appleton City, Mo. Filed Aug. 18, 1919. Serial No. 318,277. 3 Claims. (Cl. 152—48.)



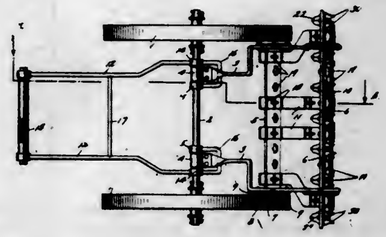
3. A wheel comprising an inner hub section and an outer rim section, a concentrically arranged annulus carried by the rim section and spaced from the rim, radially yieldable spokes carried by the hub section and having

their outer bifurcated ends disposed upon opposite side edges of the annulus, means carried by the spokes for



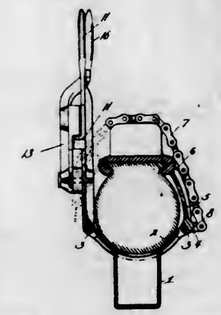
engagement with the inner and outer peripheries of the annulus and springs connecting the spokes and rim section.

1,351,641. MOTOR-VEHICLE. WILLIE GREER, Osceola, Ark. Filed Nov. 6, 1919. Serial No. 336,134. 4 Claims. (Cl. 280—124.)



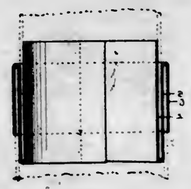
1. A motor driven vehicle including upright forks, wheels journaled within the forks, a cross bar connecting the forks and yieldably engaging the same, a main frame supported upon the cross bar, and springs interposed between the main frame and the cross bar.

1,351,642. AUTOMOBILE-SIGNAL. EDDIE FLOYD GRIFFIN, Uniontown, Pa. Filed June 2, 1917. Serial No. 172,481. 1 Claim. (Cl. 116—47.)



A device of the class described, comprising a housing, a transparent plate in the upper part thereof, a pivot pin supported by the lower front and rear walls of said housing, a signal arrow secured to said pin intermediate its ends, a counter weight on the lower end of said arrow for holding the head of the arrow opposite the transparent plate, a cross-arm on said arrow immediately above the pivot pin, cables connected with the ends of said arms and means in the lower part of the housing for illuminating the interior of the housing and the arrow.

1,351,643. CULTIVATOR. ROBERT LEE GUTHRIE, Santa Rosa, Calif. Filed Apr. 29, 1920. Serial No. 377,649. 9 Claims. (Cl. 97—42.)

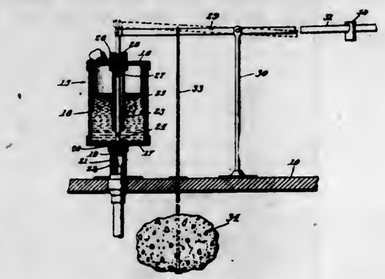


1. A cultivator, comprising a support, a pair of normally horizontal parallel bars located on the support, one bar in advance of the other, vertical standards having each a series of slots therein, turn buttons on the rear bar located in any of said slots and securing the standards to the bar, and braces connecting the lower portions of the standards with the forward bar.

1,351,644. WHEEL-LOCK. IGNAZ HADINGER, Pottsville, Pa. Filed Mar. 29, 1920. Serial No. 369,714. 12 Claims. (Cl. 70—90.)

12. In a wheel lock, a chock adapted to be applied to the tire thereof, a flexible member connected to said chock and means comprising relatively movable levers for tightening and locking said flexible member about the felly of the wheel.

1,351,645. PIPE-COUPLING. BENJAMIN RILLEY HAMBY, Crum Creek, Okla. Filed Oct. 13, 1919. Serial No. 330,269. 3 Claims. (Cl. 285—185.)

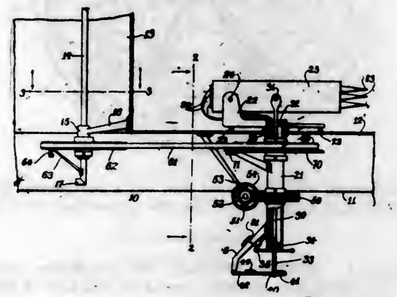


1. A pipe coupling comprising a tubular body longitudinally split with the adjacent edges overlapping for expansion and contraction of said body and inwardly and outwardly folded ends on the body to provide reversely extended flanges for forming pipe end receiving sockets.

1,351,646. BOTTLE-OPENER. JOHN ALDEN HIGGS, Wareham, Mass. Filed Dec. 4, 1919. Serial No. 342,331. 2 Claims. (Cl. 65—47.)

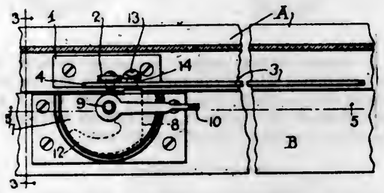
1. An article of the character specified, comprising a narrow base having a point at one end and a butt at the opposite end and wings at opposite sides of the base and projecting therefrom to form a finger grip, said wings being inwardly inclined and having their outer edge portions brought together, and notched in their outer edges to form an opener for crimped metal caps.

1,351,647. INCUBATOR ATTACHMENT. WILLIAM E. HILL, Alton, N. H. Filed Apr. 1, 1919. Serial No. 286,702. 3 Claims. (Cl. 236—44.)



1. The combination with an incubator, of a water reservoir communicating with the interior of the incubator to supply moisture, a spring actuated plunger valve within the reservoir for controlling the supply of water to the incubator and means controlled by the degree of moisture within the incubator for operating the valve.

1,351,648. COMMUTATOR. LEWIS E. HODGES, Tarboro, N. C. Filed Sept. 22, 1919. Serial No. 325,393. 4 Claims. (Cl. 200—26.)

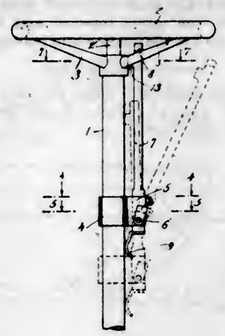


4. In a commutator, a rotatably mounted shaft, a casing surrounding the shaft, said casing including a rear wall and a removable front wall having openings therein for the passage of the shaft, a sleeve surrounding the shaft within the casing and having one end surrounding the opening in the rear wall and its opposite end extending through the opening in the front wall, a distributer arm rotatable with said sleeve for engagement with spaced contacts carried by the casing, means engageable with the sleeve and shaft and contacting with the outer wall to hold the parts assembled, spaced aprons carried by the sleeve for contact with the inner surfaces of the front and rear walls to properly position the distributer arm between said walls and to prevent the escape of lubricant, an auxiliary cover plate and means for removably holding the latter in position in a manner to permit of rotation of the casing.

1,351,649. COMBINED PERISCOPE AND GUN. LOUIS HOLECEK, Oakland, Calif. Filed Sept. 16, 1918. Serial No. 254,318. 10 Claims. (Cl. 89—41.)

1. In a submarine, the combination of a periscope, a gun mounted to swing on a vertical axis on a submarine above deck, and indicating means carried by the gun support and controlled by the periscope to permit the gun to be swung to point in the same direction as the periscope.

1,351,650. WINDOW-LOCK. ARTHUR J. HUFFER, Philadelphia, Pa. Filed June 12, 1919. Serial No. 303,844. 1 Claim. (Cl. 292—270.)

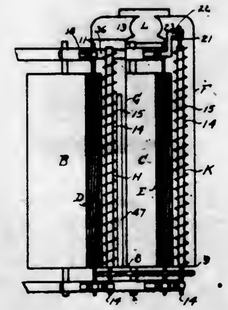


A device of the class described comprising a casing connected with the top of the lower sash, a vertical shaft journaled in said casing and having its upper end projecting therefrom, a hand lever connected with said projecting end, a locking member carried by the inner end of said shaft, said member having a hook at one end and a groove in its other end, the casing having an opening in one side through which said hook and grooved part are adapted to extend, a plate carried by the lower rail of the upper sash, an upright on said plate, a slotted lever pivoted to said upright and having a projecting reduced end extending beyond the pivotal point and adapted to be engaged by the hook on the locking member when the plate is in horizontal position and said slot having an enlarged lower end for receiving the grooved end of the locking member for guiding said end into the upper part of the slot to permit the sash to be opened to a limited extent.

1,351,651. AUTOMOBILE-LOCK. JAMES W. HUNTER, Mobile, and EDWIN WILLIAMSON, Selma, Ala. Filed Dec. 15, 1919. Serial No. 345,022. 5 Claims. (Cl. 70—129.)

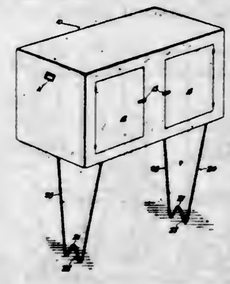
1. A device of the character stated, comprising a split collar adapted to be positioned around a steering column,

an arm pivotally connected to the collar, cam blocks operatively connected to the arm and engaging a split collar and adapted to contract the collar when the arm is in



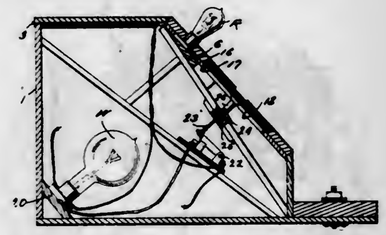
a vertical position, and said arm adapted, when moved to a vertical position, to be positioned between the spokes of the wheel.

1,351,652. METHOD OF MAKING PYROXYLIN PRODUCTS. JOHN G. JARVIS, Stamford, N. Y. Filed Mar. 13, 1919, Serial No. 282,402. Renewed June 23, 1920. Serial No. 391,161. 2 Claims. (Cl. 18—57.)



1. A method of making pyroxylin products consisting of a spreading mixture made of nitrocellulose and acetyl cellulose united by a mutual solvent when in a soft state upon a carrier, afterward spreading upon the soft surface a fluid mixture made of acetyl cellulose and naphthalene in suitable proportions, together with equal parts of acetone and acetic ether and to which a solution of acetone and collodion is added and when in a homogeneous state a solution such as chloral hydrate is added to reduce the inflammability of the film.

1,351,653. BUR-CONVEYER ATTACHMENT FOR WOOL-CARDS. CHARLES EDWARD JEWETT, North Andover, Mass. Filed Mar. 22, 1919. Serial No. 284,292. 10 Claims. (Cl. 19—3.)

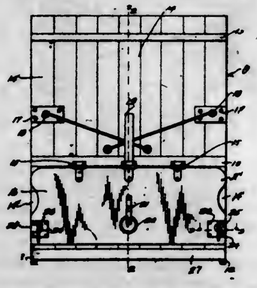


8. The combination in a card having revoluble carding rolls and a revoluble bur roll for beating burs from one of such rolls, of a trough having an open end with a V-shaped open bearing therein and extending across such card proximate said bur roll in position to receive the burs, and a revoluble screw conveyer which extends through such trough, one end resting on such open bearing adapted to convey burs through the trough and to deliver them from the open end thereof, bearings which carry the other end of the screw conveyer, driving means for said conveyer proximate said bearings, and a resistance member attached lengthwise to said trough proximate the screw conveyer.

1,351,654. CABINET. RICHARD JOBLING, Calumet, Mich. Filed Feb. 17, 1919. Serial No. 277,454. 1 Claim. (Cl. 45—71.)

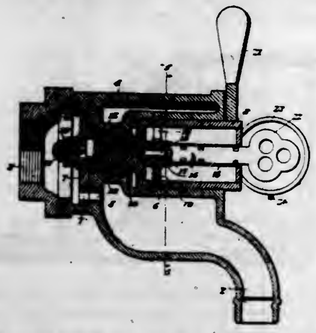
A bread or cake cabinet, comprising a hollow box-like member, having doors at the front thereof, vertical and horizontal partitions therein dividing the same into pairs of upper and lower compartments, and said partitions having portions of the ends thereof spaced from each other and from the walls of the cabinet to provide communicating air passages for all the compartments, the base of the cabinet having openings communicating with the lower compartments, and pivoted doors controlling said openings.

1,351,655. ELECTRIC PRINTING-MACHINE. GEORGE W. JOHNSON, Latrobe, Pa. Filed Jan. 28, 1919. Serial No. 273,529. 1 Claim. (Cl. 95—73.)



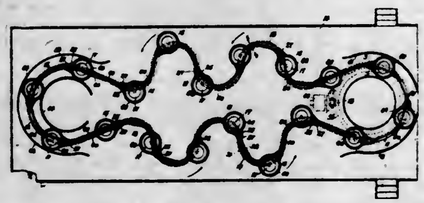
In a device of the character described, the combination of a casing including a circuit therein having a lamp and a knife switch, a rod connected to said knife switch and having a head on its outer end, a coiled spring surrounding said rod and engaging said head for forcing the same in one direction to hold the switch normally open, an abutment means on said casing for said spring, said head adapted to compress said coil spring against said abutment, said casing having a print receiving portion provided with a sectional door, said casing having a recess contiguous to the receiving portion, a plunger extending into said recess and having its inner end contacting with the head of said rod, a tongue extending from one section of the door and adapted to be received within the recess as the door is closed to strike said plunger and cause the same to depress said rod to close the switch, although when one section of the door is opened for the usual purposes the tongue will be removed from the plunger to cause the spring to again open the switch, as and for the purposes set forth.

1,351,656. COMBINED END-GATE AND SHOVELING-BOARD. HENRY H. JOHNSON, Avoca, Iowa. Filed Oct. 12, 1917. Serial No. 196,195. 1 Claim. (Cl. 296—51.)



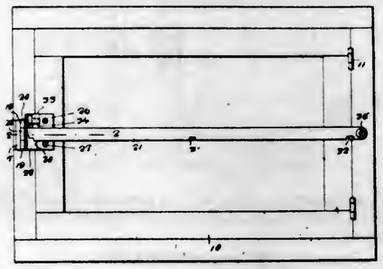
In an end gate structure for wagon bodies, the combination with an upper section closed at its upper portion and having legs at its sides extending downward, wings disposed at right angles to said legs and extending throughout their length, means pivotally connecting the lower ends of the wings with the wagon body, means detachably con-

necting the upper portion of this section with said body, and a door hinged to said section and having upright boards for closing the space between said legs and a cross board to lap said legs when the door is closed, the ends of such board having horizontal notches; of a bracket se-



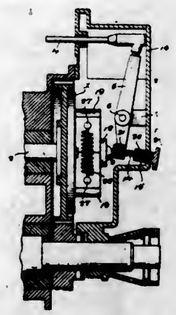
cured to each wing and having a nut, and a bolt passing through each leg and threaded at its inner end to engage said nut, its body having a shoulder next outside the leg and projecting beyond the shoulder to engage one of said slots and its outer end having a T-head adapted to be set across the slot, for the purpose set forth.

1,351,657. FAUCET. JOEL W. JOHNSON and ALBERT J. CARPENTER, Pine Bluff, Ark. Filed Aug. 30, 1918. Serial No. 252,091. 2 Claims. (Cl. 251—6.)



1. A faucet comprising a casing, a valve plate therein, a hollow stem connected with the valve plate, a handle on said stem, locking bolts located in the bottom of the hollow in the stem and adapted to engage a part of the casing, means carried by said bottom for actuating said bolts the top of the stem being closed and having a key hole therein and a key adapted to pass through said key hole to engage the bolt actuating means.

1,351,658. PLEASURE-RAILWAY. MARCUS JOHNSON, Brooklyn, N. Y. Filed Nov. 4, 1919. Serial No. 335,571. 13 Claims. (Cl. 104—66.)



1. A pleasure railway, comprising a platform provided with an endless guideway, a plurality of cars mounted to travel on the said platform and extending across the said guideway, and propelling means arranged underneath the platform and having connecting means extending through the said guideway and each connected with a corresponding car to move the latter forward and to allow it to swing sidewise on the platform while traveling thereon.

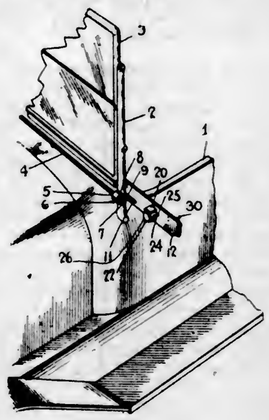
1,351,659. SASH-BOWER. JOHN F. JOST, Leavenworth, Kans. Filed Apr. 12, 1918. Serial No. 228,184. 3 Claims. (Cl. 292—266.)

1. The combination with a sash frame having a sash hinged thereto, of a bar secured to the frame and capable of both horizontal bearing and vertical pivotal movement, an outwardly inclined inner plate carried by the frame, an outwardly inclined inner plate carried by the sash for contacting engagement with the first mentioned plate, both of said plates being provided with notches for engagement with the bar and means for securing the bar against movement.

1,351,660. GAS-ENGINE GOVERNOR. JOHN KATHE, Quincy, Ill. Filed May 20, 1919. Serial No. 298,557. 1 Claim. (Cl. 264—17.)

The combination in a governor, of a radially-slotted disk-like motor-driven rotary member, a housing in which said member is disposed, centrifugal members held to the face of the rotary member by means movable in the slots of the latter and yieldingly held against outward movement, said centrifugal members having inner lapped cam portions, a tubular guide carried by the motor-driven member and in which said cam portions are movable, a central endwise-movable plunger in said guide and having a cam portion opposed to the cam-portions of the centrifugal members, a lever mounted in the housing and movable by said plunger, and a spring arranged at the opposite side of the lever to the plunger.

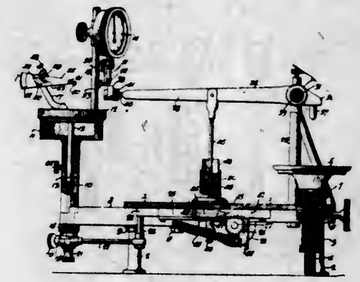
1,351,661. COLOR-INDICATING CHART. JEAN FRANÇOIS KAUFMAN, New York, N. Y. Filed Sept. 4, 1918. Serial No. 252,619. 9 Claims. (Cl. 88—14.)



1. A color-indicating chart comprising a disk having a series of areas triangularly arranged, said areas having

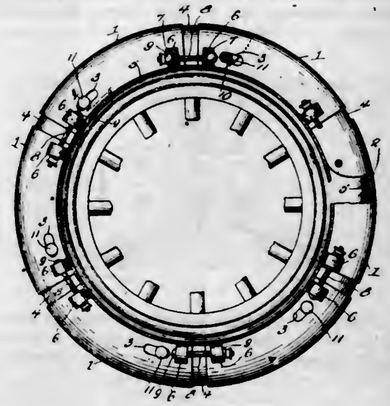
applied thereto the three primary colors and blends of the adjacent colors graded through the intervening areas, a

cover plate for said chart having triangularly disposed view openings therein for exposing said colors, and a movable shutter adapted to expose and close said openings.



1,351,662. AUTOMOBILE-SIGNAL. HERMAN KLATT, Pueblo, Colo. Filed Mar. 24, 1919. Serial No. 284,564. 1 Claim. (Cl. 177—329.)

In an automobile direction signal, the combination of carrying means, a rectilinearly movable pointer member on said carrying means and provided with a rack, an incandescent electric lamp on the carrying means, and a switch complementary to said lamp and comprising a turning member provided with a gear that is intermeshed with the rack; manipulation of said turning member bringing about completion or interruption of the circuit connected with the lamp.

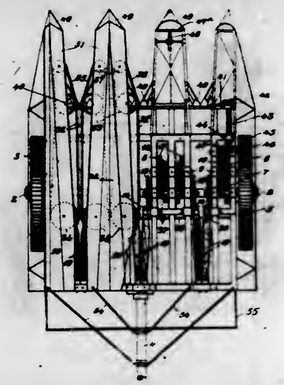


1,351,663. GAGE. JOHN R. KOCH, Philadelphia, Pa. Filed Nov. 22, 1919. Serial No. 339,924. 5 Claims. (Cl. 33—147.)

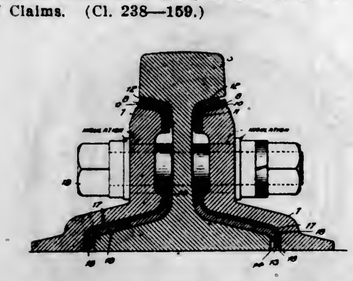
1. The combination in a gage, of a base; a table mounted on the base; means for adjusting the table; standards; a beam pivotally mounted on the standards and in the form of a lever; the short arm of the beam having a pin directly above the table; an indicator shiftable into and out of register with the long arm of the

beam and arranged to be actuated thereby; and means for raising the beam.

1,351,664. TIRE-ARMOR. HARVEY M. LALEY, Monessen, Pa. Filed Sept. 28, 1918. Serial No. 256,047. 1 Claim. (Cl. 152—17.)



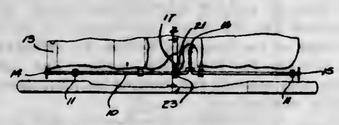
A tire armor comprising a plurality of circumferentially extended transversely bowed sections arranged in overlapping relation, each of said sections having one of its ends recessed and its other end reduced to be received in the recess of the co-acting section, an articulated connection between the respective sections, and means between the said sections for limiting an articulated movement there between.



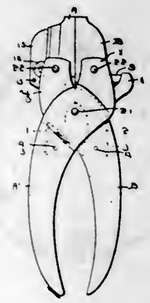
1,351,665. MAIZE OR INDIAN-CORN HARVESTING MACHINE. EMILIO LOGARZO, Buenos Aires, Argentina. Filed Nov. 18, 1916. Serial No. 131,989. 7 Claims. (Cl. 56—64.)

1. In a corn harvesting machine, the combination of a supporting frame, driving wheels for the frame, means carried by the front portion of the frame to gather fallen plants, a plurality of endless devices to receive the plants and carry them rearwardly with respect to the machine, cutting devices to sever the plants from the ground, and a

plurality of coöperating biconical rollers to remove the husks therefrom, said rollers having yielding fluted surfaces and operating in a plane different from the plane in which the endless devices operate.

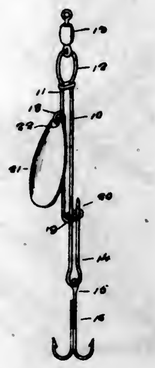


1,351,666. INSULATED AND ARMORED RAIL-JOINT. CHARLES G. MCCAULLEY, Washington, D. C., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1918, Serial No. 252,941. Renewed Feb. 4, 1920. Serial No. 356,124. 17 Claims. (Cl. 238—159.)



7. An insulated rail joint including a retaining member fitting the head of the splice bar and having a plurality of keeper elements, and an insulating unit engaging a keeper element and the head of the rail.

1,351,667. AUTOMOBILE-SIGNAL. JOSEPH L. MCWILLIAMS, San Francisco, Calif. Filed Jan. 25, 1919. Serial No. 273,058. 1 Claim. (Cl. 116—47.)

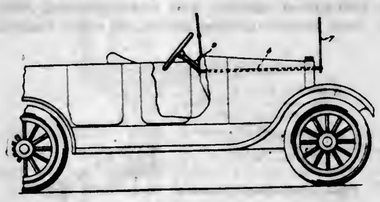


A direction indicator for an automobile including a longitudinally extending rock shaft having a crank portion, and a pinion, a vertical tubular member mounted adjacent the seat of the driver and extending through the floor of the automobile, a radial signal arm on each end of the shaft, a vertically reciprocable rod disposed through the tubular member and having a rack engaging with the pinion, and a spring connected to the crank portion and to the automobile for yieldably returning and holding the shaft and signal arms in normal central position.

1,351,668. PARALLEL-JAW PLIERS. ANTON MAR, New Haven, Conn. Filed Nov. 4, 1919. Serial No. 335,636. 5 Claims. (Cl. 7—3.)

5. In pliers of the character described, relatively movable jaws, one of said jaws being provided with a knife edge, an arm pivotally supported upon the jaw having the knife edge and provided with a companion knife edge to coöperate with the latter, means actuating the arm and actuated upon by the other jaw to effect the approach of the knife edges toward each other, and means for actuating the jaws for the opening and closing thereof.

1,351,669. ARTIFICIAL BAIT. CHARLES R. MANSFIELD, Crescent City, Calif. Filed Dec. 5, 1919. Serial No. 342,702. 4 Claims. (Cl. 43—28.)



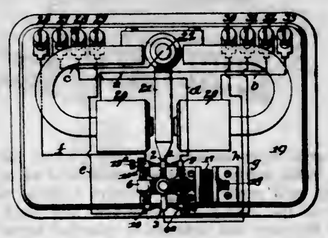
1. An artificial bait comprising a body portion formed from a single strand of wire and bent to provide an eye at one end of the body, and spaced limbs, one of said limbs terminating to provide a hook, an eye formed in the length of the other limb, and arranged at right angles to the aforementioned eye, the plate having an opening to receive said eye from which the plate is supported, and a laterally disposed open loop formed by the free ends of the second mentioned limb, said loop being adapted to embrace said hook to hold the latter closed.

1,351,670. TIRE-FILLER AND METHOD OF MAKING THE SAME. FRANC D. MAYNE, Chicago, Ill. Filed Jan. 27, 1919. Serial No. 273,239. 5 Claims. (Cl. 106—23.)

1. A tire filler, consisting of the following ingredients in the proportion stated: 152 lbs. of sunflower seed oil, 32 lbs. of sulfur chlorid, 5 lbs. of calcium hydroxid, 4 ozs. of soluble dyes, and 8 lbs. of soap oil.

1,351,671. DIRECTION-INDICATOR. JAMES ELMER MAYHALL, Covington, Ky. Filed Oct. 30, 1919. Serial No. 334,393. 1 Claim. (Cl. 74—39.)

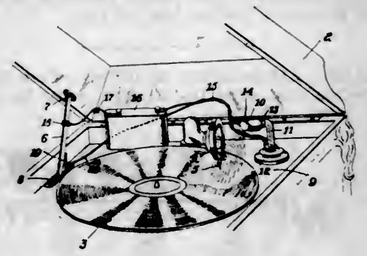
The combination with a vertical support; of a semicircular plate mounted on the support with the convex edge thereof disposed uppermost, said plate having an opening at the axis thereof and a vertical slot above said opening near the convex edge, stop pins projecting from the face of the plate near the extremities of the convex edge, a shaft having bearing in the opening and adapted to support an arm at its opposite end for bearing a signal or the like, and a lever fixed to the shaft at the end thereof projecting through the plate and extending in juxtaposition to the face of the plate and beyond the convex edge thereof to form a handle, said handle being offset and having a projecting prong combining with the resiliency of the lever to engage in the slot automatically for maintaining said shaft and the arm in a fixed position, said pins serving to limit the swing of the lever, substantially as and for the purpose set forth.



1,351,672. PROCESS OF PRODUCING DOUBLE SUPER-PHOSPHATE. CURTIS C. MEIGS, Philadelphia, Pa. Filed Oct. 28, 1919. Serial No. 333,955. 6 Claims. (Cl. 71—7.)

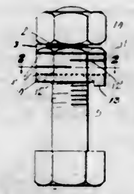
1. The herein described process of producing double super-phosphate which consists in treating phosphate rock with about one-half the amount of acid used in producing ordinary super-phosphate, treating the resulting mass with an excess of a solution of an alkali metal sulfate to produce a dialkali metal phosphate, filtering the products of the reaction, separating the free alkali metal sulfate from the filtrate, subjecting the remaining liquid to crystallization, separating the crystals formed, heating such crystals to a temperature of at least 100° F., subjecting the product to the action of dilute hydrochloric acid, subjecting phosphate rock to the action of the resulting solution, and drying the resulting product.

1,351,673. ALLOY. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Foster Milliken, S. Fullerton Weaver, and James M. Repplier, trustees. Filed Oct. 8, 1919. Serial No. 329,375. 2 Claims. (Cl. 75—1.)



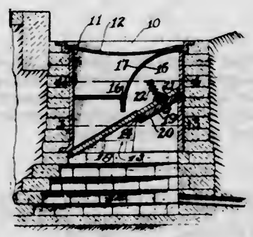
1. An alloy formed from copper 42 to 52 per cent., nickel 22 to 28 per cent., and lead 22 to 30 per cent.

1,351,674. RELAY-ARMATURE. JAMES ISHAM MITCHNER, Atlanta, Ga. Filed Aug. 5, 1918. Serial No. 248,362. 9 Claims. (Cl. 200—104.)



1. A relay armature having a plurality of insulated contacts, and a plurality of pairs of insulated contacts rockably mounted independently of the armature for adaptation to the associated armature contacts when the armature swings, and for simultaneous completion of a plurality of circuits.

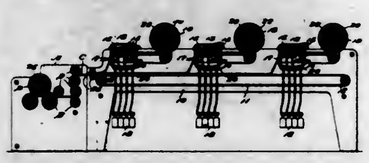
1,351,675. LIGHTING ATTACHMENT FOR PHONOGRAPHS. WILLIAM C. MONEY, Washington, D. C., assignor of one-half to Henry Bogorad, Washington, D. C. Filed May 26, 1919. Serial No. 299,694. 1 Claim. (Cl. 240—2.)



In combination with a talking or like machine, having a top plate movable cover with a brace arm for holding said cover elevated, a lighting attachment comprising a lamp, a battery, circuit connections, a clip to be slipped on the brace for closing the circuit at one end to the brace, and a contact supported by and at the upper face of the top plate to be borne upon by the brace when the cover is open and to be free from the brace when the cover is closed, thereby to control the lamp, substantially as described.

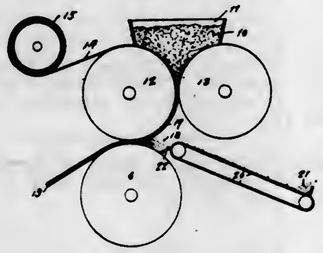
1,351,676. NUT-LOCK. WALTER S. MYERS, Darby, Pa. Filed Apr. 26, 1919. Serial No. 292,975. 4 Claims. (Cl. 151—21.)

1. In a nut lock, a nut having a bolt-receiving opening and a transverse slit communicating with the opening, the slit being filled with compressible soft, rust-resisting metal.



1,351,677. SEWER-TRAP. HENRY W. NAGEL, Charleston, S. C. Filed Jan. 20, 1919. Serial No. 272,070. 1 Claim. (Cl. 182—14.)

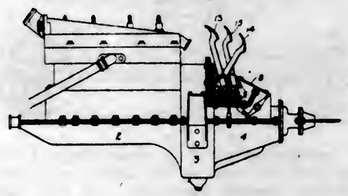
A sewer trap comprising an open-ended casing having curved grooves in the inner faces of two of its opposite



walls, a curved guard plate engaged in said grooves and extending into the casing, the lower portions of said grooved walls being cut out and formed with stop shoulders, inwardly extending pins carried by said walls, and a door having an inner thickened end portion formed with a longitudinal groove arranged to receive the said pins and whereby said door is pivotally supported in the casing, the said thickened portion of the door lying beneath the curved guard plate, and a spring carried by said thickened portion and arranged to be compressed against said guard plate when the door is swung open and to expand to impart an initial closing movement to the door when pressure is released from the door.

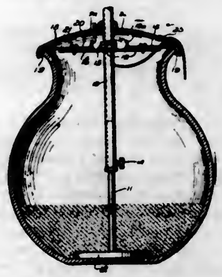
1,351,678. LAP-DRAWING MACHINE. PAUL NUCKOLS, Cordova, Ala. Filed Dec. 2, 1919. Serial No. 341,888. 6 Claims. (Cl. 19—8.)

4. In combination with a lap head, a lap drawing device comprising a frame, bracket members carried by said frame and adapted to journally support the spindles of a plurality of rolls of sheet cotton to be treated, a set of rollers associated with each roll and arranged adjacent the associated brackets, each set of rollers including upper and lower rows coöperating for engagement with the sheet of cotton, means for driving the rollers in each set,—co-acting teeth formed on the corresponding upper and lower rollers in each set, and means for conducting the sheet of cotton from each set of rollers to the lap head, said means comprising a plurality of guide rollers interposed between said frame and said lap head.



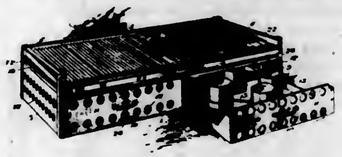
1,351,679. METHOD OF INLAYING LINOLEUM AND THE PRODUCT THEREOF. CHARLES A. O'BRIEN, Kearney, N. J., assignor to The Nairn Linoleum Company, Kearney, N. J., a Corporation of New Jersey. Filed Jan. 26, 1918. Serial No. 213,885. 7 Claims. (Cl. 154—26.)

1. A method of inlaying linoleum which consists in forming a ground web and thereafter rolling into the material thereof spaced elements of differently colored material to form therewith a patterned ground said colored material being in comminuted form.



1,351,680. TRANSMISSION-CASE. GEORGE H. PADGETT, Otisville, N. Y. Filed June 18, 1919. Serial No. 305,028. 2 Claims. (Cl. 74—56.)

1. A transmission case, including a case formed with a substantially square conventional opening through its upper face, such opening being formed around three of its sides with a flange, such case being formed with a further opening to one side of and in communication with such first-named opening and communicating with the same, such second opening having its edges flanged, and

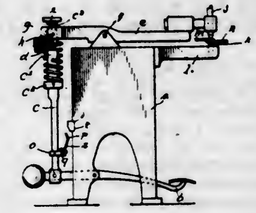


a plate adapted to seat within such second-named opening, the upper edge of such plate being flanged, and when in applied position forming a continuation of the flange around the first-named opening whereby the plate therefor may seat properly.

1,351,681. LAMP-FIXTURE. JAMES S. PENNEFATHER, New York, N. Y., assignor of one-half to William E. Price, New York, N. Y. Filed July 30, 1919. Serial No. 314,209. 4 Claims. (Cl. 240—52.)

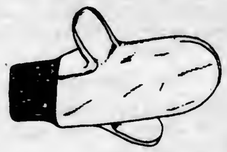
3. An adapter for securing illuminating fixtures to vases, comprising; a rod inserted in a vase, an anchor base carried on the end of the rod to mount said rod in the vase, a hub on the rod, radial arms on the hub, a clamp arm adjustably related with each radial arm, and a hook made on each end of the clamp arm to grasp the rim of a vase.

1,351,682. GRILL-STOVE. ISAAC C. POPPER, New York, N. Y., assignor to The Theros Company, New York, N. Y., a Corporation of Delaware. Filed May 8, 1920. Serial No. 379,862. 6 Claims. (Cl. 126—43.)



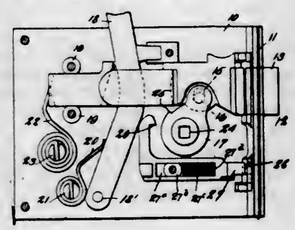
1. A grill stove including a body portion having perforated walls, guides at opposite sides, and an open front, a sliding grill rack, sliding drawers adapted to fit and be slid in the guides and openings, and rigid lugs for holding the rack and drawers in position when slid into place, and for guiding and supporting them when pulled out of their normal position.

1,351,683. PIPE. NATHAN H. PRICE, Shannon, Ala. Filed Aug. 25, 1919. Serial No. 319,598. 2 Claims. (Cl. 131—12.)



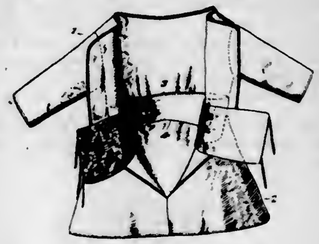
2. In combination with a smoker's pipe having an opening through the bottom of the smoke chamber thereof, a clamp having a hook-shaped end on the stem of the pipe, and the said stem between the clamp and the referred to opening having a depression providing a pocket on its under face, of a combined cleaning and supporting means for said pipe including a disk designed to be received in the smoke bowl below the passage in the stem of the pipe, a stem on said disk passing through the opening in the smoke bowl, a spring rod pivotally secured to the outer end of the stem designed to contact with the stem of the pipe and to be engaged in the hook of the clamp for holding the said disk in the smoke chamber, and the stem of the said disk designed to be received in the opening in the stem of the pipe and the spring rod adapted to exert a pressure between the hook of the clamp and the mouth piece of the pipe when the device is employed as a support for the pipe.

1,351,684. METHOD AND APPARATUS FOR UNITING TOGETHER PIECES OF BRASS, ALUMINIUM, AND SIMILAR METALS OR ALLOYS BY ELECTRIC-RESISTANCE HEATING. NORBERT PRÖSTLER, Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 26, 1915, Serial No. 30,573. Renewed Jan. 14, 1920. Serial No. 351,494. 3 Claims. (Cl. 219—10.)



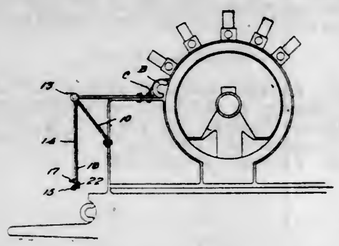
1. The method of uniting brass pieces by electric resistance heating, which consists in subjecting the brass pieces to be united to a gradually increasing yielding electrode-pressure, closing the electric welding circuit, and, when a fusion has been produced by the electric current at the place of welding, transforming said gradually increasing electrode pressure acting upon the brass pieces into a non-yielding pressure adapted to render the uniting of said brass parts more perfect.

1,351,685. REVERSIBLE HAND-COVERING. CHARLOTTE M. PUTNAM, Falls City, Nebr. Filed Oct. 1, 1917. Serial No. 194,186. 1 Claim. (Cl. 2—102.)



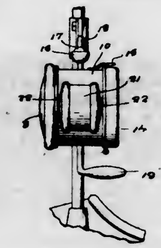
In a reversible mitten, a one piece body folded longitudinally to provide a front and back and having a pair of slits adjacent the line of fold providing a tongue and another slit adjacent one side edge providing a second tongue, a thumb blank secured to the first tongue and edges of the pair of slits, and a second thumb blank secured to the second tongue and to the edge of said other slit and directly to the side edge of the body opposite the second tongue.

1,351,686. LATCH. PASQUALE RACCIO, New Haven, Conn., assignor, by direct and mesne assignments, to The Racolock Company, New Haven, Conn., a Corporation of Connecticut. Filed Aug. 5, 1919. Serial No. 315,472. 2 Claims. (Cl. 292—333.)



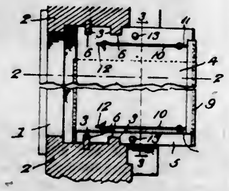
1. In a latch, a casing, a bolt slidable therein, means for urging the bolt outwardly, a rollback having a shoulder, means for operatively connecting the rollback and latch whereby they move in unison, a trigger bolt slidable in the casing and projecting therefrom, means for holding the trigger bolt projected, means for retracting the trigger bolt, a trigger carried by the trigger bolt and adapted to engage the shoulder of the rollback when the bolt is retracted, and means for retracting the bolt.

1,351,687. GARMENT. ANNA L. RANKIN, Peoria, Ill. Filed Mar. 17, 1919. Serial No. 283,027. 1 Claim. (Cl. 2—145.)



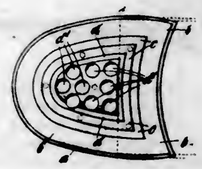
A garment for infants comprising a shirt and a skirt forming a continuation of the shirt, said shirt and the upper part of the skirt being opened in the front, a bandage of greater diameter than the garment and having its upper edge secured to the inner part of the shirt at a point adjacent the connection of said shirt with the skirt, said bandage opening in front and having overlapping ends, said ends being free of the shirt and the lower rear part of said bandage being cut away to make the rear part of less width than the front part and means for connecting the ends of the bandage to the other parts thereof whereby the diameter of the bandage may be adjusted.

1,351,688. ATTACHMENT FOR IRONING-MACHINES. GEORGE F. RAMM, Del Monte, Calif. Filed Feb. 20, 1920. Serial No. 360,128. 5 Claims. (Cl. 68—9.)



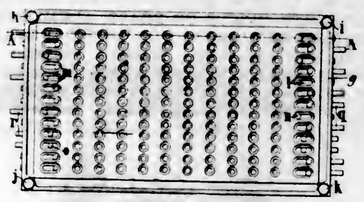
1. An attachment for ironing machines comprising a shield detachably mounted upon the delivery end thereof and arranged in depending position for covering the traveling apron thereof.

1,351,689. COMBINED LAMP AND SIGNAL. FREDERICK RAUSCHER, New York, N. Y. Filed June 9, 1919. Serial No. 302,682. 2 Claims. (Cl. 240—11.)



1. The combination with an automobile lamp, including a casing, of a signal comprising a relatively small casing carried by and arranged at one side of the lamp casing, a lens at each end of said small casing, reflectors disposed within said casing and dividing the latter into separate compartments, a plurality of bulbs arranged in each compartment and varying in color, and certain lights of the respective compartments being in circuit and adapted to be lighted simultaneously and independently of the remaining bulbs.

1,351,690. WINDOW-SEAT. ALFRED RIDING, Worcester, Mass. Filed Sept. 27, 1918. Serial No. 255,923. 1 Claim. (Cl. 804—26.)



A window seat comprising a lower base board having upwardly extending flanges at its front and rear edges, said flanges having grooves therein, an upper base board mounted on the lower board and having its edges engaging said grooves, the outer end edge of each board having notches therein for engaging the window beads and a back support hinged to the upper base board.

1,351,691. RESILIENT HEEL OR LIFT FOR BOOTS AND SHOES. HARRY CHARLES RIDOUT, Bournemouth, England. Filed Jan. 7, 1920. Serial No. 349,915. 10 Claims. (Cl. 36—35.)

1. In a resilient lift for boots, the combination of a plurality of surfaces arranged in tiers on the upper part of the lift so as to provide a plurality of recesses one within another in the upper face of the said lift.

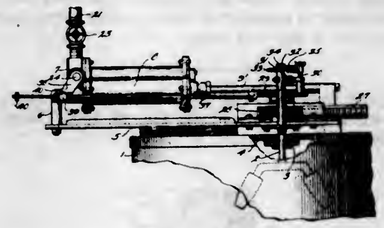
1,351,692. MEANS FOR COMPILING TABULAR AND STATISTICAL DATA. HERBERT EDWARD SOPER, London, England. Filed July 23, 1918. Serial No. 246,272. 5 Claims. (Cl. 129—16.1.)

1. Means for compiling data of the kind specified, comprising a number of sheets superposed in a file, each sheet answering to a character into one of whose alternative categories and individual entry from the data may be placed; means for giving definitive displacements in its plane to each sheet at will without displacing the other sheets, such displacements by their distances and direction answering in predetermined manner to the several categories into which the character borne by the sheet is divided; said sheets having successive entries recorded thereon by means comprising a single hole extending through the mass of sheets when these have been given the displacements appropriate to the classification of the entry, said entries being distinguished by their position in serial order upon the face of the file.

1,351,693. PROCESS OF PRODUCING ALKALI-METAL HYDROXIDS. SAMUEL S. SADTLER, Springfield township, Montgomery county, Pa. Filed Mar. 21, 1919. Serial No. 284,064. 10 Claims. (Cl. 23—22.)

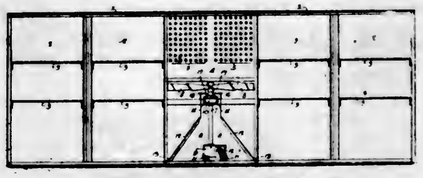
1. The process of producing an alkali metal hydroxid which consists in reacting upon disodium phosphate with calcium hydroxid in the approximate proportions of from 148 to 222 parts by weight of the hydroxid to 284 parts by weight of the phosphate.

1,351,694. METAL LATH. STEPHEN SCANLON, New York, N. Y. Filed Feb. 4, 1919. Serial No. 275,013. 1 Claim. (Cl. 72—116.)



A lath comprising a sheet metal blank folded upon itself at equi-distantly spaced intervals to provide layers contacting throughout their entire area and adapted to be

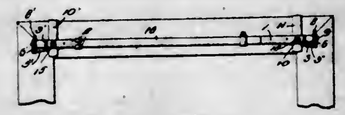
expanded to form oppositely disposed substantially triangular pockets, said pockets tapering inwardly from



their outer open ends to provide gradually decreasing opposed upper and lower walls which meet at their inner pointed ends.

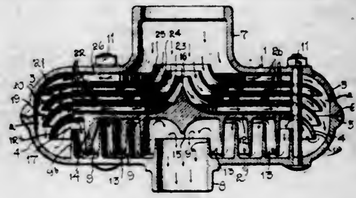
1,351,695. MOTOR. JOHN SCHROEDER, Davenport, Iowa. Filed Jan. 31, 1920. Serial No. 355,390. 5 Claims. (Cl. 121—164.)

1. A valve gear, comprising a shaft, means for turning the shaft in opposite directions, a crank disk loose on said shaft, means on the shaft and disk compelling the disk to turn with the shaft during a portion of the rotary movements of the shaft in both directions, a spring operatively connected to the disk and compelling the latter to complete its movements in both directions, a valve operating crank arm, and a rod connecting the disk and crank arm.



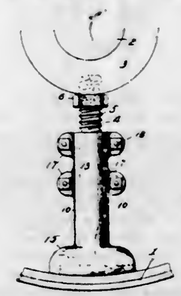
1,351,696. FAN FOR DRYING-MACHINES. WALTER M. SCHWARTZ and ELWOOD B. AYRES, Philadelphia, Pa., assignors to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1920. Serial No. 357,095. 5 Claims. (Cl. 34—39.)

1. The combination in a drier, of a drying chamber; a tunnel in the drier; a driving shaft extending into the tunnel; a vertical shaft driven from the driving shaft; bearings for the vertical shafts; and fans carried by the vertical shafts for circulating the air in the drying chamber.



1,351,697. ADJUSTABLE SHADE AND CURTAIN-POLE SUPPORTING BRACKET. ELISHA T. SHEPPARD, Stonega, Va. Filed Oct. 11, 1919. Serial No. 330,084. 2 Claims. (Cl. 156—23.)

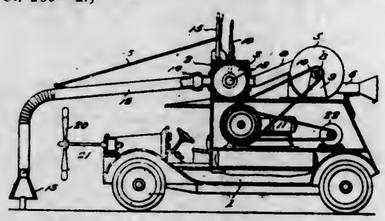
2. In combination, a lower flat bar terminating at one end in two clasping lugs and at the other in an outstanding shade supporting ear, a rightangular bracket ending in a pole supporting hook held to said bar, a bolt passing through said bar and bracket, a counterpart flat upper bar held below said clasping lugs, at one end and having an outstanding shade supporting ear, a counterpart rightangular bracket ending in a pole supporting hook held to



said bar, a bolt passing through said last bar and bracket, a hanger held to each of said bolts ending in a rightangular supporting shoulder, a pinch collar surrounding said two bars, and an S-shaped hook having a stop shoulder pivotally held to the end of each of said supporting hooks.

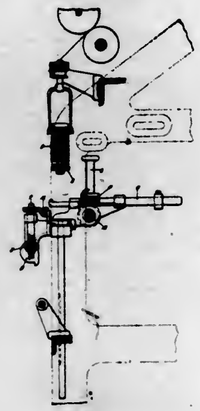
1,351,698. MUFFLER FOR STEAM AND GAS ENGINES. CHARLES S. SHUMAN and SOREN SCOTT HANSON, New York, N. Y., assignors to Vacuum Muffler Corporation of America, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1919. Serial No. 346,670. 14 Claims. (Cl. 137—160.)

1. The method of muffling engine exhausts, which comprises subdividing the engine exhaust into a plurality of concentric portions, separately directing said portions into parallel layers at substantially right angles to the direction of initial flow, expanding and thereby cooling each layer separately, discharging and expanding the cooled gases directly into an expanding chamber and passing the united expanded gases over cooling surfaces into the direction of initial flow.



1,351,699. PROTECTOR FOR TROMMEL-SPOKES. FRANK SMARCH, Anaconda, Mont. Filed Mar. 31, 1920. Serial No. 370,314. 2 Claims. (Cl. 83—66.)

1. In a trommel wherein are employed radial spokes each with an expanded head for abutment against the rim of the trommel, means for protecting the stems of the spokes and the heads of the spokes from wear, consisting of a longitudinal divided sleeve adapted to be applied

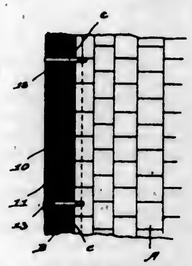


about the spoke and fastened thereto, said sleeve having a laterally expanded end portion adapted to over-ride and house the head end of the spoke and press against the inner periphery of the rim and the fastening means whereby the head end of the spoke is made fast to the rim of the trommel.

1,351,700. FIRE-ENGINE. PAUL E. SMITH, Henrietta, Tex. Filed Feb. 7, 1920. Serial No. 356,953. 3 Claims. (Cl. 169—1.)

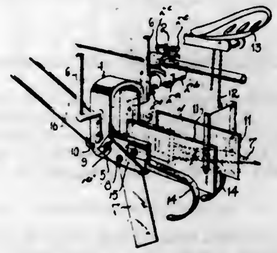
1. An apparatus for extinguishing fires in oil wells comprising a wheeled frame, a suction producing apparatus carried thereby, a suction tube connected with the apparatus, a nozzle at the free end of said tube for fitting over the mouth of the well and an outlet conduit connected with the suction means and extending through the rear of the frame.

1,351,701. DOFFING MECHANISM FOR FLIER SPINNING, TWISTING, DOUBLING, AND ANALOGOUS MACHINES. PRINCE SMITH, Jr., Keighley, England. Original application filed Mar. 12, 1918, Serial No. 222,009. Divided and this application filed July 31, 1918. Serial No. 247,517. 1 Claim. (Cl. 118—18.)



Doffing mechanism for flier spinning, twisting, doubling and analogous machines embodying a vertically movable lifter plate for carrying empty bobbins, a vertically movable lifter plate for carrying full bobbins, a horizontally reciprocable rack having a plurality of recesses for receiving said lifter plates, the lifter plate recess for the empty bobbins being disposed in the rear of the lifter plate recess for the full bobbins, and receiving means immovable at intervals and vertically movable at other times for engaging and raising the lifter plate with the full bobbins to permit the return movement of said rack, said recesses being so spaced that when the lifter plate with the full bobbins is in operative position with relation to said means the empty bobbins are in proper alinement and ready to be elevated to spinning position.

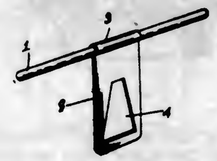
1,351,702. VALVE-GEAR FOR STEAM-ENGINES. WILLIAM H. SMITH, Picher, Okla. Filed Aug. 22, 1918. Serial No. 250,985. 1 Claim. (Cl. 121—164.)



A valve gear for steam engines comprising a plate adapted to be loosely carried by a cross head guide and having an elongated slot of less length than the stroke of the cross head adapted to receive a cross head pin whereby to slightly reciprocate the plate, a shaft adapted to be arranged transversely of the cross head guide, an arm pivoted to the plate and fixed to the shaft intermediate the extremities thereof, a second arm fixed to the end of the shaft, a rod, a link pivotally connecting the rod to the second named arm, and a cross arm adapted to be fixed to a steam control valve and pivotally connected with the rod whereby to actuate the steam control valve upon reciprocation of the cross head.

1,351,703. EAVES-TROUGH SCREEN. WILLIAM L. SPRIGGS, Bixby, Okla. Filed Jan. 23, 1920. Serial No. 353,465. 1 Claim. (Cl. 108—28.)

An attachment for eaves-troughs comprising a wire screen having one edge rolled for conforming engagement upon the rolled outer edge of the trough and having its other edge portion formed with an upwardly extending channel engaged upon the rear edge of the trough, the screen being provided at intervals with openings for the accommodation of the braces holding the trough in position upon the roof.

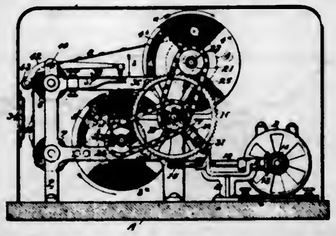


1,351,704. CULTIVATOR ATTACHMENT. THOMAS STARCH, Ralls, Tex. Filed Aug. 20, 1919. Serial No. 318,681. 2 Claims. (Cl. 97—13.)

1. An attachment for cultivators, consisting of an inverted U-shaped member having rearward projecting angled extensions at its lower end, means for securing said U-shaped member to a cultivator, spring tooth bars

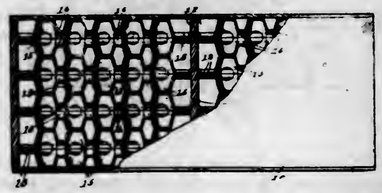
and plate guards disposed on opposite sides of each of said extensions, and means for adjustably securing said spring tooth bars and plate guards to said extensions, including a common pivotal supporting member for the tooth bar and plate guard carried by each of said extensions.

1,351,705. RAIL-LIFTER. JOHN B. STIMATZE, St. John, Kans. Filed Feb. 21, 1920. Serial No. 360,375. 2 Claims. (Cl. 294—15.)



1. A device of the class described comprising a handle member and a plate carried thereby and having a rail receiving opening therein.

1,351,706. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. WILLIAM E. STITZER, Muskogee, Okla. Filed Nov. 24, 1919. Serial No. 340,173. 1 Claim. (Cl. 184—65.)



In an internal combustion engine, the combination with the lubricator casing, of a normally open short circuiting circuit for the ignition circuit, and means controlled by the level of the oil in the lubricator casing for closing said circuit when said level falls below a predetermined point, said means comprising an arc shaped float, a rod on which the float has guided movement, a contact member connecting the ends of the float, and a rod supported by the casing in insulating relation and having a lug at its lower end for engagement by the contact member.

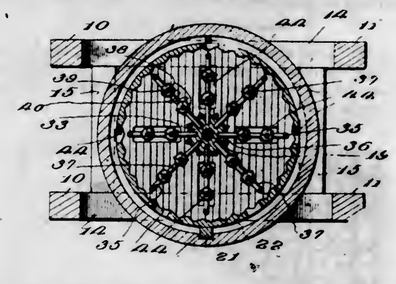
1,351,707. INDICATOR. MICHAEL F. SULLIVAN, San Francisco, Calif., assignor to Gertrude A. Margeson, San Jose, Calif. Filed Aug. 22, 1918. Serial No. 250,961. 2 Claims. (Cl. 40—53.)

1. In a street indicator, a frame, a pair of rollers borne by the frame and having a belt engaged therewith, means to drive the rollers including a motor, and means to stop the motor including a contact device, means to connect said device to the frame, an L-shaped rocker arm having one end horizontal and arranged above the device and formed to close the device, said rocker arm being pivoted at its angle to the frame and having its other end depending downwardly from the pivot, and projections on the belt engageable with said other end of the arm to raise the latter, the depending end of the rocker arm being formed so as to normally maintain the horizontal end thereof out of engagement with the contact device.

1,351,708. EGG-CASE. GEORGE THEMANN, Joliet, Ill., assignor of eleven per cent. to Fred A. Muentnich, Joliet, Ill. Filed June 28, 1919. Serial No. 307,436. 2 Claims. (Cl. 217—26.)

1. An egg case comprising a receptacle, egg container units therein, said container units being formed with spaced egg receiving portions arranged in superimposed relation with the pockets of adjacent upper and lower units staggered and air circulating passages between the pockets.

1,351,709. SOUNDING-BOARD FOR MUSICAL INSTRUMENTS. JOSEPH VIRZI, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,165. 2 Claims. (Cl. 84—44.)



1. In a musical instrument, the combination with a sounding board and a bridge on one side thereof, of an auxiliary sounding board on the opposite side of the main sounding board from the bridge, and means extending between the sounding boards to support the auxiliary sounding board leaving the periphery of the auxiliary sounding board free, said supporting means being in alinement with the bridge.

1,351,710. METHOD OF OPENING THE SHADE ENDS OF HAND-BLOWN GLASS ROLLERS. CHARLES F. WARRICK, Morgantown, W. Va., assignor to United States Window Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed May 9, 1919. Serial No. 295,977. 4 Claims. (Cl. 49—77.)

1. A method of opening the shade end of hand blown rollers comprising applying heat to a small area at the

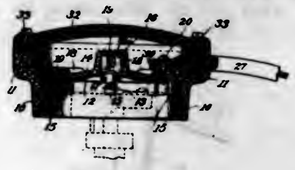
apex of said closed end and confining the heat to said area, and causing the gases within the roller to expand until said small heated area blows open.

1,351,711. POTATO-PEELER. SAMUEL JESSIE WHITE, Haleyville, Ala. Filed Jan. 28, 1919. Serial No. 273,676. 4 Claims. (Cl. 146—14.)

1. In a device for peeling potatoes or like articles, the combination with a receptacle for containing a mass of the articles; of a flail consisting of a staff and a swingle flexibly connected therewith and having a roughened surface, and means for moving the staff through the mass and permitting the swingle to trail from it.

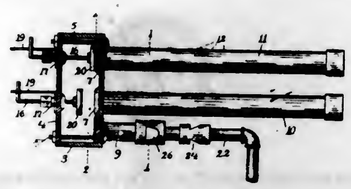
1,351,712. SAFETY-RAZOR. WILLIAM A. BARRY, Little Rock, Ark. Filed May 19, 1920. Serial No. 382,671. 10 Claims. (Cl. 30—12.)

7. In a safety razor, a front plate, an adapter having means to engage a razor blade, and means on said front plate to prevent longitudinal and angular displacement of said adapter.



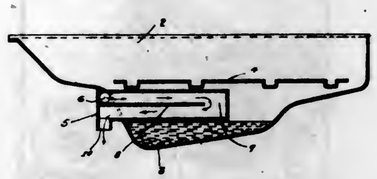
1,351,713. SAFETY-RAZOR. WILLIAM A. BARRY, Little Rock, Ark. Filed June 12, 1920. Serial No. 388,594. 24 Claims. (Cl. 30—12.)

9. In a safety razor, a blade, superimposed members between which the blade is held, one of said members having a reduced central portion, means for positively positioning the blade with reference thereto, and means for flexing the one member to slide the blade along the other member to vary the position of the edge of the blade with reference to said other member.



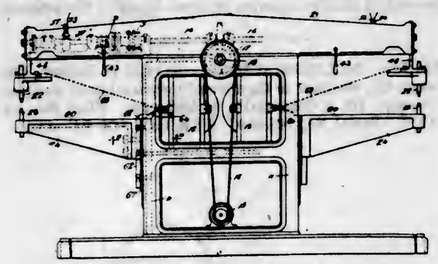
1,351,714. DISTRIBUTER-HEAD FOR IGNITION DEVICES. ALBERT E. BERDON, Anderson, Ind., and CLARENCE RINGWALD and ALBERT B. GOMORY, Detroit, Mich., assignors to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed May 25, 1917. Serial No. 170,820. 5 Claims. (Cl. 200—23.)

4. A distributer head for ignition apparatus comprising a shell divided by a partition into a cable receiving chamber and into a distributer chamber; L-shaped distributer posts embedded in said partition, each having one leg thereof exposed in the distributer chamber; a plurality of insulated cables extending through the shell into the cable receiving chamber, said cables having their ends flattened out and provided with holes passing through the insulated portion and the conducting portion of the cables; screws



passing through said holes and having threaded engagement with the distributer posts whereby to hold said cable ends in position and for making electrical connection with the posts; and a detachable cover for the cable receiving chamber for permitting ready access to the cable securing means, said cover being removable from the head without interference with any of said cables.

1,351,715. GAS-BURNER. GEORGE W. CALEF, Boston, Mass. Filed Nov. 5, 1919. Serial No. 335,821. 4 Claims. (Cl. 158—105.)

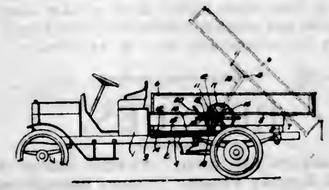


2. A gas burner comprising a hollow header adapted to receive a supply of burning gas, a plurality of burner tubes communicating with the interior of the header, a cap for the inner end of each tube, a stem supporting each cap slidably supported by a wall of the header and extended through the same to the exterior thereof, each stem having means for rendering its passage to the exterior gas-tight, the outer end of each stem being bent upward, and a slotted guide slidably receiving each upward-bend.

1,351,716. CRANK-CASE EVAPORATOR. FREDRICK I. COCHRANE, Minneapolis, Minn., assignor to Crank Case Evaporator Company, a Partnership composed of Harvey E. Mack and Frederick I. Cochrane. Filed Feb. 16, 1920. Serial No. 358,913. 5 Claims. (Cl. 123—198.)

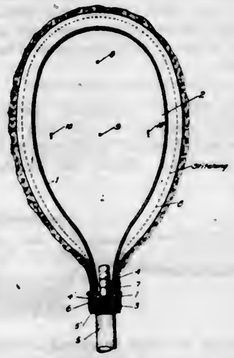
1. The combination, with a gas engine crank case, of a member mounted to project into the case with a greater portion of its walls above the level of the oil therein, means for circulating a heating agent through said member to heat the walls thereof and evaporate the moisture within said crank case.

1,351,717. DUPLEX ROTARY ELECTRIC WELDING-MACHINE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1919. Serial No. 290,783. 20 Claims. (Cl. 219—4.)



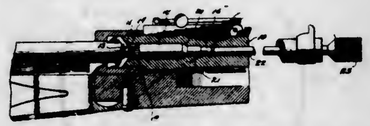
1. In an electric welding machine, a frame, a transformer mounted therein, welding electrodes arranged in the secondary circuit of said transformer, a power driven shaft journaled in said frame, and connections operated thereby and including friction disks yieldingly held in contact with each other for reciprocating one of said electrodes toward and from the other.

1,351,718. COMBUSTION-ENGINE. WILLIAM T. PRICE, New Rochelle, N. Y., assignor to De La Vergne Machine Company, New York, N. Y., a Corporation of New York. Filed June 22, 1915. Serial No. 35,498. 12 Claims. (Cl. 123—119.)



3. In an internal combustion engine, a crank inclosure having double walls with offset ports communicating respectively with the crank space and with the atmosphere and affording a circuitous passageway constantly open to oscillatory air movement.

1,351,719. DUMPING VEHICLE-BODY AND HOIST THEREFOR. ROBERT W. ROSE, Clifton, Mass., assignor to Lally Commercial Body Company, Everett, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1915. Serial No. 46,657. 2 Claims. (Cl. 298—11.)



1. Hoisting apparatus of the kind described, comprising a vehicle frame having fixed tracks at each side, a dumping vehicle body adapted to be inclined on said frame about a pivot near the rear of the body, hoisting mechanism to incline said body, comprising a pair of rigid bent arms, one arm at each side of the body, each arm having a roll adapted to bear upon said track, each arm consisting of two portions extending at an angle to each other, one portion being substantially in vertical position when the body is lowered and the other portion extending horizontally, a winding shaft carried by the frame approximately in the same horizontal plane as the upper end of the vertically extending portions of the bent arms and flexible connections from said winding shaft to the outer free ends of each arm, said connections leading over the elbow at the junction of said vertical and horizontal extending portions of the arms, and means to rotate said shaft to wind up the flexible connections and operate the hoisting mechanism.

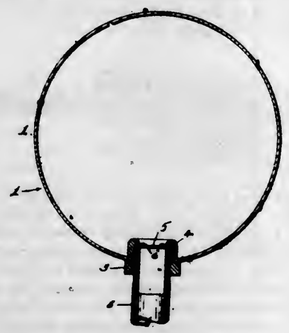
1,351,720. CLEANING APPLIANCE. GEORGE LEON BARTLETT, Boston, Mass. Filed June 1, 1917. Serial No. 172,808. 3 Claims. (Cl. 15—51.)

1. A cleaning appliance comprising in combination a frame, a bag of flexible sheet material secured to and receiving said frame, means to introduce a cleaning fluid into said bag; said sheet material when said bag is filled with said fluid, presenting a filamentary fluid-cushioned surface to the article to be cleaned and being perforate to permit of a flow of the fluid out from said bag into and through the mass of filaments composing said surface, said filaments being substantially incapable of opposing flexure thereof and being so close together that said surface is felt-like and permits said fluid merely to seep therethrough.

1,351,721. HEADSPACE-MICROMETER. THEODORE H. EICKHOFF, Washington, D. C., and CHARLES A. TUNKS, Cleveland, Ohio, assignors, by direct and mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed July 25, 1917. Serial No. 182,761. 7 Claims. (Cl. 33—163.)

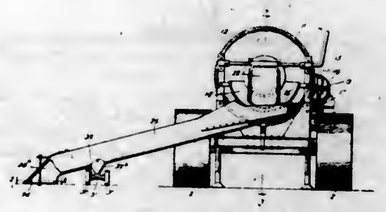
1. A headspace micrometer for measuring the length of the firing chamber in a firearm comprising a beam adapted to be placed in the firing chamber, and a sleeve movable longitudinally of the beam and adapted to be placed in the firing chamber, the sleeve and the beam having measuring faces respectively adapted to engage the forward and rearward ends of the firing chamber when the firing chamber is closed, and means adapted to extend through the barrel of the firearm for moving the sleeve and beam longitudinally of each other when the firing chamber is closed.

1,351,722. MEMBER FOR SHOE-UPPERS. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to Lorens Muther, Newton, Mass. Filed Oct. 20, 1917. Serial No. 197,611. 5 Claims. (Cl. 36—57.)



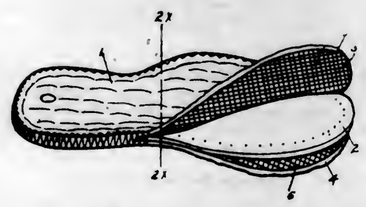
2. A shoe upper member having a marginal edge folded over, and a folded tape having adhesive exterior surfaces, lying within the folded margin, the folded edge of the tape coinciding with the turned over edge of the material, and the double edges of the tape coinciding with the fold of the material.

1,351,723. BLACKING-DAUBER. LEWIS MARCHIONE, Boston, Mass., assignor to The Self Feeding Dauber Co., Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 21, 1919. Serial No. 312,423. 3 Claims. (Cl. 15—46.)



1. In a device of the class described, a container, spreading means carried thereby, a closed substantially tubular receptacle connected to said container and communicating therewith, a plunger within said receptacle, a circumferentially grooved portion on said plunger intermediate its ends, and forming two plunger heads, two apertured portions on the walls of said receptacle and spaced from each other, and adapted for alternate communication with said grooved plunger portion, and respectively in communication with said container and with said spreading means, and operating means exterior of said receptacle connected to said plunger, and elastic cushioning means between the plunger and the bottom of the receptacle.

1,351,724. CONDUIT-SEAL. JOHN I. MISENER, Syracuse, N. Y., assignor to Misener & Irving Manufacturing Co. Inc., Syracuse, N. Y., a Corporation of New York. Filed June 18, 1918. Serial No. 240,622. 2 Claims. (Cl. 247—7.)

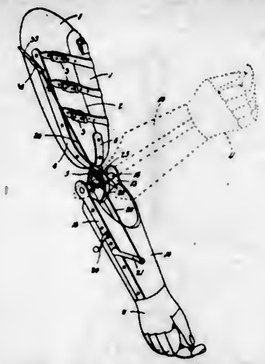


1. The combination of a conduit outlet box, a conduit extending through one wall thereof, means for securing said conduit in position including a bushing threaded upon the end of the conduit and bearing against the inner face of the box wall, an annular internal flange provided on the bushing and extending over the end edge of the conduit and a flat disk of puncturable insulating material having its marginal edge held between the end edge of the conduit and the annular internal flange of the bushing.

1,351,725. MIXING-MACHINE. ALFRED D. MOSBY, Chicago, Ill., assignor to Equipment Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1917. Serial No. 148,470. 6 Claims. (Cl. 94—44.)

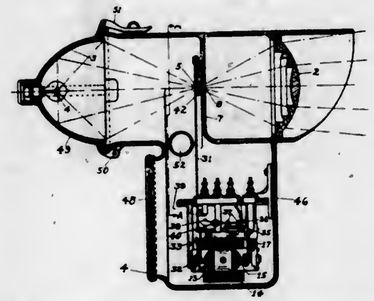
5. A mixing machine having a discharge device having its discharge end provided with wheels adapted to rest and travel upon the surface on which the machine stands, in combination with means for supporting said wheels to permit them to swing horizontally and tilt vertically.

1,351,726. HAIR INSOLE. JOHN T. STORY, New York, N. Y. Filed Feb. 2, 1920. Serial No. 355,832. 3 Claims. (Cl. 36—44.)



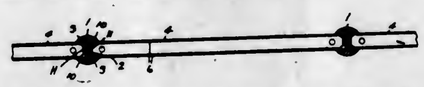
1. An insole having an intermediate layer of binding material, a layer of hair loosely disposed on one side thereof and stitched thereto, a layer on the other side formed of a thin fabric with a layer of hair loosely disposed thereon and stitched thereto, the second layer being fastened to the intermediate layer by an adhesive.

REISSUES.



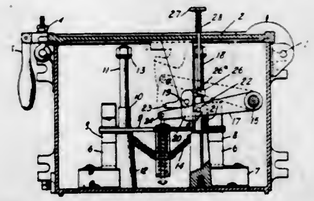
14,939. ARTIFICIAL ARM. WILLIAM PURVES ANDERSON and NORMAN CARLYLE CLARKE, Birmingham, and JOHN FALCONER WHITELAW, Erdington, England. Filed May 21, 1920. Serial No. 383,285. Original No. 1,272,179, dated July 9, 1918, Serial No. 172,041, filed May 31, 1917. 9 Claims. (Cl. 3—12.)

1. In an artificial arm, the combination of an upper arm socket, a forearm pivoted thereto, a sliding bolt for locking said forearm in its adjusted position relatively to the socket, a crank on the forearm controlling



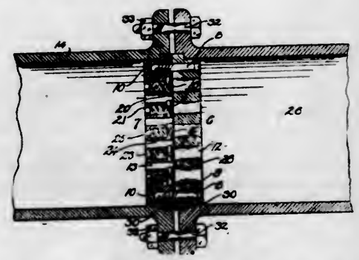
said sliding bolt and having a limited movement only, and a controlling cable connected to said crank for the purpose specified.

14,940. LIGHT-SIGNAL. ELI J. BLAKE, Buffalo, N. Y., assignor to Hall Switch & Signal Co., a Corporation of Maine. Filed May 26, 1920. Serial No. 384,478. Original No. 1,279,638, dated Sept. 24, 1918, Serial No. 178,720, filed July 5, 1917. 15 Claims. (Cl. 240—23.)



10. In combination, a source of light, means for condensing rays of light from said source at a focal point, a plurality of color filters, means for selectively moving one color filter or another into position at said focal point so that the rays of light at that point may pass through it, and means for changing the direction of the light rays after they have passed through the color filter.

14,941. REINFORCING MEANS FOR CONCRETE STRUCTURES. WILLIAM GOLDIE, Wilkinsburg, Pa. Filed Mar. 30, 1920. Serial No. 370,037. Original No. 1,312,908, dated Aug. 12, 1919, Serial No. 244,236, filed July 10, 1918. 10 Claims. (Cl. 72—110.)

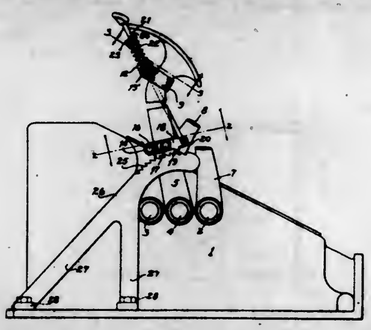


1. A reinforcing structure for concrete, comprising main frame members having recesses extending along the sides thereof, metallic connecting members for entering the side recesses of said bars and having movable portions adapted to be forced into holding engagement with the said frame members within the said recesses, and locking members for forcing the said movable portions of the said connecting members into said holding engagement in said recesses.

14,942. ELECTRICAL SWITCH. BRYSON D. HORTON, Detroit, Mich., and WILLIAM P. HAMMOND, Passaic, N. J.; said Hammond assignor to said Horton. Filed Mar. 20, 1919. Serial No. 283,931. Original No. 1,187,911, dated June 20, 1916, Serial No. 826,843, filed Mar. 24, 1914. 2 Claims. (Cl. 200—50.)

1. In combination with a housing provided with a hinged cover, a switch mechanism therein including movable and stationary coöperating contacts, means for freely operating the switch mechanism to make or break the circuit without opening the receptacle and switch actuating devices carried by the cover normally engaging the switch mechanism whereby the switch mechanism is thrown to its "off" position during the opening movement of the cover, and means for closing said switch during the closing movement of the cover.

14,943. CHECK-VALVE. HENRY O. JACKSON, Denver, Colo., assignor to The Jackson Compressor Company, Denver, Colo., a Corporation of Colorado. Filed June 1, 1920. Serial No. 385,761. Original No. 1,297,296, dated Mar. 11, 1919, Serial No. 98,296, filed May 18, 1916. 9 Claims. (Cl. 277—46.)



7. A check valve comprising a casing having a number of coöperating inlet and exit passages arranged in staggered relation, and relatively long, flat, thin valve pieces mounted to move bodily and substantially uniformly throughout their entire length, toward and away from the exit extremities of the inlet passages, the inner faces of the casing partitions between the exit passages having shallow recesses and ports in communication with these recesses, certain of the ports being counterbored, and spiral springs located in the counterbores of the said ports and acting on the valve pieces to move them normally into seated relation with the exit extremities of the inlet passages.

14,944. ATTACHMENT FOR LEVERS. CLARENCE H. WALKER, New York, N. Y. Filed Dec. 2, 1919. Serial No. 341,989. Original No. 1,249,260, dated Dec. 4, 1917, Serial No. 148,021, filed Feb. 12, 1917. 4 Claims. (Cl. 74—81.)

2. In combination with a spring-pressed lever provided with a foot engaging surface, locking mechanism for the lever comprising a supporting member formed for connection to the lever below said foot engaging surface, a pawl pivotally supported by said member, a ratchet with which said pawl coöperates mounted independently

of the lever, a pawl-operating element mounted on the lever and operable by the foot on said engaging surface,

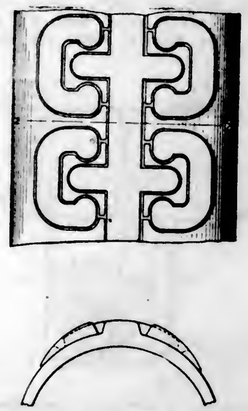
and a spring applied to the pawl to normally maintain it disengaged from the ratchet.

14,945. DOOR-LATCH AND CONTROLLING DEVICE FOR COMBINED HINGE AND SLIDE DOORS. THOMAS V. PLICE, Ashland, Ohio, assignor to The Topping Manufacturing Co., Ashland, Ohio, a Corporation of Ohio. Filed July 10, 1920. Serial No. 395,386. Original No. 1,341,583, dated May 25, 1920, Serial No. 348,357, filed Dec. 30, 1919. 11 Claims. (Cl. 292—136.)

1. In a door locking mechanism, two complementary latchable frames, a horizontally positioned tongue carried by one frame, jaws on the other frame forming a socket for the tongue, and a horizontally pivoted latch member carried by said other frame for detachably engaging said tongue, said tongue operating to lift said latch upon a door closing movement.

DESIGNS.

56,215. SPOON, FORK, OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Jan. 21, 1920. Serial No. 353,089. Term of patent 7 years.

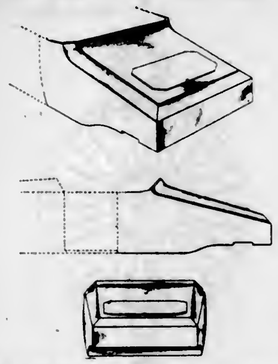


The ornamental design for a spoon, fork, or similar article, as shown.

56,216. SPOON, FORK, OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed June 14, 1920. Serial No. 389,082. Term of patent 7 years.

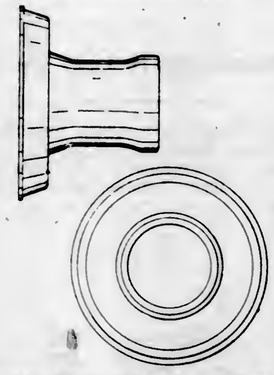
The ornamental design for a spoon, fork, or similar article, as shown.

56,217. TIRE-TREAD. HENRY B. BIXLER, Akron, Ohio, assignor to The Chillicothe Tire and Rubber Company, Chillicothe, Ohio. Filed July 21, 1919. Serial No. 312,457. Term of patent 7 years.



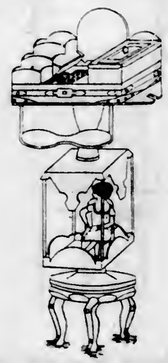
The ornamental design for a tire tread as shown.

56,218. PHONOGRAPH CASE OR CABINET. JOSEPH F. BOSSERMAN, Staunton, Va.; H. H. Bosserman administrator of said Joseph F. Bosserman, deceased. Filed Oct. 8, 1919. Serial No. 329,371. Term of patent 14 years.



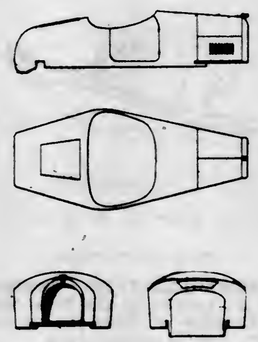
The ornamental design for a phonograph case or cabinet, as shown.

56,219. REAR-END PORTION OF AN AUTOMOBILE-BODY. FRED E. BRADFIELD, Davenport, Iowa. Filed Nov. 20, 1919. Serial No. 339,440. Term of patent 7 years.



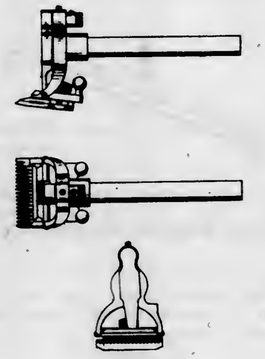
The ornamental design for a rear end portion of an automobile body, as shown.

56,220. WHEEL-HUB. THOMAS C. BURNS and FRANK K. HUFFMAN, Jackson, Mich., assignors to Hayes Wheel Company, Jackson, Mich. Filed June 19, 1920. Serial No. 390,262. Term of patent 14 years.



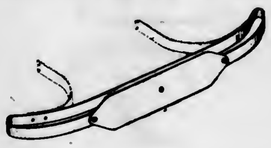
The ornamental design for a wheel hub as shown.

56,221. SMOKER'S STAND. ARTHUR CHEEKS, Birmingham, Ala. Filed June 5, 1920. Serial No. 386,817. Term of patent 14 years.



The ornamental design for a smoker's stand as shown.

56,222. AUTOMOBILE-BODY. JULIUS W. CHORDAS, Los Angeles, Calif. Filed June 17, 1919. Serial No. 304,846. Term of patent 14 years.

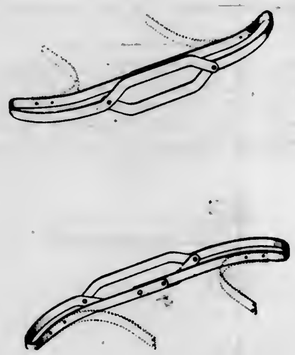


The ornamental design for an automobile body, as shown.

56,223. HAIR-CUTTING-MACHINE FRAME. SAMUEL M. COFFMAN, Kansas City, Mo., assignor to The Barbers Electric Specialty Company, a Corporation of Kansas. Filed May 17, 1918. Serial No. 235,195. Term of patent 14 years.

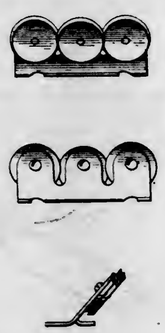
The ornamental design for a hair cutting machine frame, as shown.

56,224. AUTOMOBILE-BUFFER. THEODORE M. COX, Albany, N. Y., assignor to Cox Brass Manufacturing Company, Albany, N. Y. Filed June 21, 1920. Serial No. 390,655. Term of patent 7 years.



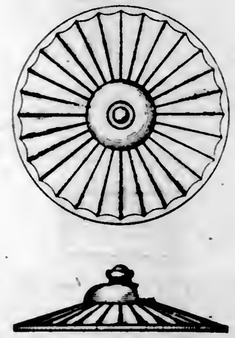
The ornamental design for an automobile buffer, as shown.

56,225. AUTOMOBILE-BUFFER. THEODORE M. COX, Albany, N. Y., assignor to Cox Brass Manufacturing Company, Albany, N. Y. Filed June 21, 1920. Serial No. 390,656. Term of patent 7 years.



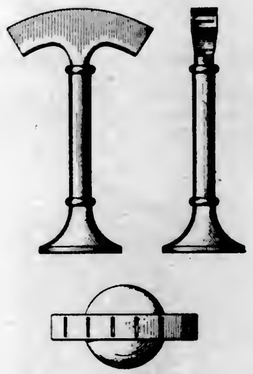
The ornamental design for an automobile buffer, as shown.

56,226. AUTOMOBILE-BUFFER. THEODORE M. COX, Albany, N. Y., assignor to Cox Brass Manufacturing Company, Albany, N. Y. Filed June 21, 1920. Serial No. 390,657. Term of patent 7 years.



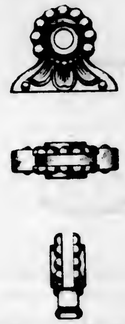
The ornamental design for an automobile buffer, as shown.

56,227. KNIFE-SHARPENER. TERENCE F. CURLEY, Brooklyn, N. Y. Filed Apr. 2, 1920. Serial No. 370,884. Term of patent 7 years.



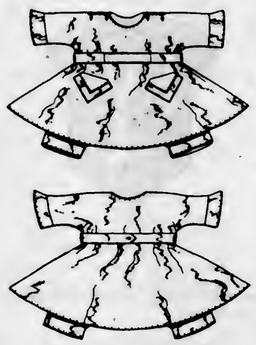
The ornamental design for a knife sharpener as shown.

56,228. GLASS COVER FOR A DISH. HOWARD S. EVANS, Pittsburgh, Pa. Filed Aug. 8, 1919. Serial No. 316,270. Term of patent 14 years.



The ornamental design for a glass cover for a dish, as shown.

56,229. FRUIT-KNIFE HOLDER OR SIMILAR ARTICLE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,167. Term of patent 14 years.

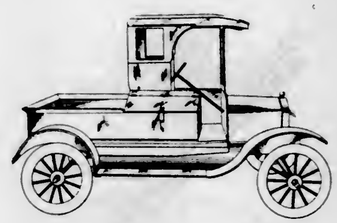


The ornamental design for a fruit knife holder or similar article, as shown.

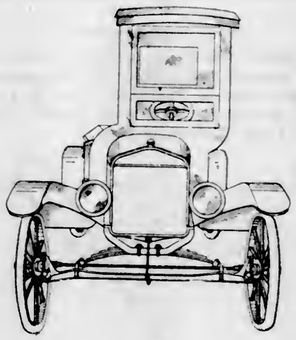
56,230. EAR FOR A HANDLE OF BOWLS OR SIMILAR ARTICLES. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,168. Term of patent 7 years.

The ornamental design for an ear for a handle of bowls or similar articles, as shown.

56,231. CHILD'S ROMPER. EUGENE GILLMAN and LEAH SIEGEL, Seattle, Wash. Filed May 6, 1920. Serial No. 379,417. Term of patent 7 years.



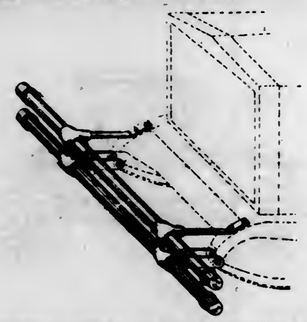
The ornamental design for a child's romper, as shown.



56,232. PHONOGRAPH-CABINET. SEWARD W. HECOX, Zeeland, Mich. Filed June 17, 1920. Serial No. 389,773. Term of patent 7 years.

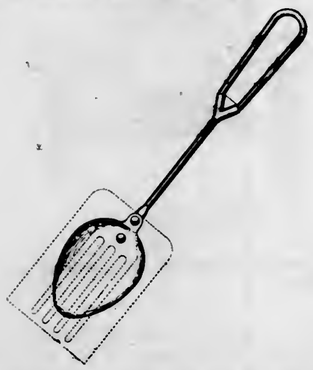
The ornamental design for a phonograph cabinet, as shown.

56,233. INDIVIDUAL-SEAT SERVICE-CAR BODY. FREDERIC M. HOBLITT, New York, N. Y. Filed Apr. 6, 1920. Serial No. 371,777. Term of patent 14 years.



The ornamental design for an individual seat service car body, as shown.

56,234. VEHICLE-OPERATOR'S HEEL-REST. WILLIAM A. HONEYMAN, San Francisco, Calif. Filed July 19, 1919. Serial No. 312,103. Term of patent 14 years.



The ornamental design for a vehicle operator's heel rest, as shown.

56,235. AUTOMOBILE-BUMPER. JAMES HOWARD HURLBUT, Los Angeles, Calif. Filed June 2, 1920. Serial No. 386,071. Term of patent 14 years.

The ornamental design for an automobile bumper as shown.

56,236. SPOON, FORK, OR SIMILAR ARTICLE. EDWARD H. JOHNSON, Binghamton, N. Y., assignor to The A. & J. Manufacturing Co., Binghamton, N. Y., a Corporation of New York. Filed June 5, 1920. Serial No. 386,821. Term of patent 14 years.

The ornamental design for a spoon, fork, or similar article substantially as shown and described.

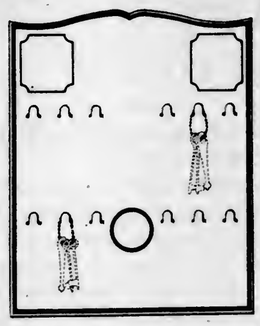
56,237. SPOON, FORK, OR SIMILAR ARTICLE. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Jan. 7, 1920. Serial No. 350,026. Term of patent 14 years.

The ornamental design for a spoon, fork, or similar article, as shown.

56,238. COLLAR-HOLDER. FRANK J. LE CLAIR, Attleboro, Mass., assignor to Freeman-Daughaday Co., Chartley, Mass., a Corporation of Massachusetts. Filed June 23, 1920. Serial No. 391,228. Term of patent 14 years.

The ornamental design for a collar holder, as shown.

56,239. EMBLEMATIC ARTICLE OF MANUFACTURE. DAVID ROSENBACH, Chicago, Ill., assignor to Illinois Automobile Club, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,559. Term of patent 14 years.

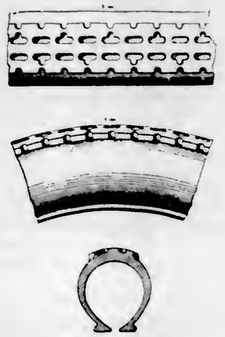


The ornamental design for an emblematic article of manufacture as shown.

56,240. EMBROIDERED LACE. HENRY SCHWARBER, Weehawken, N. J., assignor to The Inflexible Co., West New York, N. J. Filed June 14, 1920. Serial No. 389,036. Term of patent 3½ years.

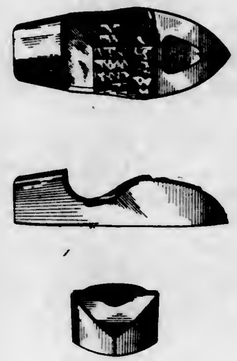
The ornamental design for embroidered lace substantially as shown.

56,241. DISPLAY-STAND. HARRY SOREF, Milwaukee, Wis. Filed June 23, 1920. Serial No. 391,226. Term of patent 7 years.



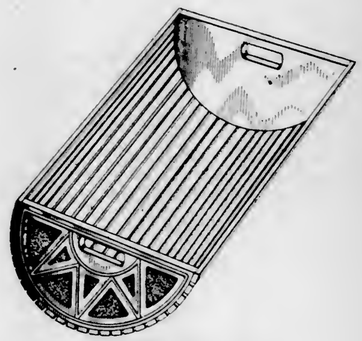
The ornamental design for a display stand, as shown.

56,242. AUXILIARY DESK-TOP. GEORGE E. STIMPSON, Worcester, Mass. Filed Feb. 21, 1919. Serial No. 278,547. Term of patent 7 years.



The ornamental design for an auxiliary desk top as shown.

56,243. TIRE-TREAD. HERBERT H. SWAN, Grand Rapids, Mich. Filed Mar. 11, 1920. Serial No. 365,076. Term of patent 14 years.



The ornamental design for a tire tread substantially as shown.

56,244. AUTOMOBILE-BODY. CLEMENS A. TIMPTE and TONY C. TIMPTE, Denver, Colo. Filed July 6, 1920. Serial No. 394,366. Term of patent 7 years.

The ornamental design for an automobile-body, as shown.

56,245. BASKET. WOJCIECH WEGIEL, Ludlow, Mass. Filed May 20, 1920. Serial No. 382,987. Term of patent 7 years.

The ornamental design for a basket, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 31, 1920.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 99,144. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELLEN BAILEY, Poughkeepsie, N. Y. Filed Nov. 7, 1916.

Consisting of a picture of Gladys Porter.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

IMPERIAL MACHINE & FOUNDRY CORPORATION *v.* G. S. BLAKESLEE & Co.

Decided December 10, 1919.

[262 Fed. Rep. 419.]

1. PATENTS—INFRINGEMENT—EQUIVALENTS.

Claims of the Robinson patent, No. 809,582, for a vegetable-peeling machine, including a rotary disk having a horizontal striated portion, *Held* infringed by a peeling-machine having an abrading-disk of concrete or cement, the latter being considered as having striations set irregularly.

2. SAME—SAME—PRELIMINARY INJUNCTION.

While an application for preliminary injunction in a suit for infringement is addressed to the discretion of the court, where the validity of the patent has been sustained by many prior adjudications and infringement is clear its refusal would be error.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit by the Imperial Machine & Foundry Corporation against G. S. Blakeslee & Co. From an order granting a preliminary injunction, defendant appeals. Affirmed.

Mr. A. H. Adams, Mr. J. L. Jackson, and *Mr. J. J. Kennedy* for the appellant.

Mr. A. Alexander Thomas for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

MANTON, *Cir. J.:*

The appellee sued for an infringement of claims 1, 2, 3, and 4 of the Robinson patent, No. 809,582, for improvements on machines for peeling vegetables. A preliminary injunction was granted and the appellant appeals.

The patent has been held valid and infringed in previous litigations. (*Imperial Machine Co.* v. *Jacobus*, D. C., 212 Fed., 958, Judge Lacombe granted a preliminary injunction; *Imperial Machine Co.* v. *Streeter & Co.*, D. C., 214 Fed., 985, Judge Hazel; *Imperial Machine Co.* v. *Smith & McNeel*, 262 Fed., ——, Judge Hough, filed February, 1914; *Imperial Machine Co.* v. *Reinhold Mfg. Co.*, 262 Fed., ——, Judge Tuthill, filed July, 1919; *Imperial Machine Co.* v. *American Fruit Machinery Co.*, D. C., 212 Fed., 959, note, Judge McPherson; *Imperial Machine Co.* v. *Whyte*, 262 Fed., ——, Judge Learned Hand, filed December, 1918; *Imperial Machine Co.* v. *Rees et al.*, D. C., 261 Fed., 612, Judge Mayer, filed November, 1919.)

(1) However, since the validity of this patent is presented to this court for the first time, we have examined the patent and are of the opinion that it is valid. It discloses a practical machine for peeling vegetables in a deep mass. Indeed, we think it is a pioneer patent. The claims in suit are as follows:

1. In a device of the class described, an impelling and abrading member comprising a rotary disk composed of a horizontal flat striated portion and a raised portion extending from near the circumference inward and having two sides sloping down to the flat striated portion of said disk, substantially as described.

2. In a device of the class described, an impelling and abrading member comprising a rotary disk composed of a number of horizontal flat striated portions separated by raised portions at intervals extending from near the circumference inward, substantially as described.

3. In a device of the class described, an impelling and abrading member comprising a rotary disk composed of a horizontal flat striated portion and a rounded raised portion rising gradually from near the center toward the circumference, substantially as described.

4. In a device of the class described, an impelling and abrading member comprising a rotary disk composed of a horizontal flat striated portion, and a rounded raised portion bounded by two approximately radial edges extending from near the circumference inward and having a striated surface, substantially as described.

The machine of this patent consists of a cylinder, at the bottom of which is mounted a rotary disk having an abrading-surface providing for one or more rounded humps or raised portions which slope down from the circumference of the disk toward the main portion thereof. The function or purpose of the mounted or sloping humps is to produce agitation or circulation of the mass of vegetables whereby all of the vegetables are brought into contact with the abrading-disk. If it were not for the sloping humps or raised portions, the vegetables in contact with the disk would be ground away and would not have any means of agitation and circulation of the mass. The specifications point this out. They point out that, where the flat disk is used alone, there is a tendency to set up a rotary motion of the mass, wherein each individual soon settles down to a substantially fixed position in the moving mass. This would result in a wear on certain parts of each vegetable and retard the sufficient action on other parts. This hump-shaped portion, with its abrading-surface, forces the mass forward; and this, together with the movement of the disk,

faster than the mass is treated, make the raised parts act to turn over the vegetables next to the bottom, so as to bring different portions of each separate individual of the mass into contact with the different abrading-surfaces. It is in this it may be said to be a pioneer invention.

The inventor, in an affidavit, points this out and deposes that for more than thirteen years the Robinson construction has been successful, and that until this construction there was no successful vegetable-peeling machine on the market; and he declares that no machine is successful without an abrading-disk having raised portions. The appellant so constructs its machine as to have a disk with humps or raised portions with an abrading-surface.

A controversy is presented as to what is meant by a striated disk within the meaning of the claims. The appellee's disk has a carborundum surface, and the appellant's disk an abrading-surface of cement or concrete. This is said to be such a difference in construction as to negative the claim that the appellant infringes. The specification of the patent states that the abrading-surface may be made of a variety of material such as cast-iron, glass, earthenware, and the inventor says that he—

> is not limited to any specific arrangement of the striations, and that a variety of methods of striation will be within the spirit of this invention.

In order to obtain efficient rubbing points or ridges, there is no need for any geometrical or symmetrical arrangement, nor is it needed to successfully do the work of peeling. It is plain that exactly the same purpose is accomplished in precisely the same way, if the points or ridges be set irregularly. This is true in the disk of both the appellee and appellant. A surface of carborundum or concrete is a striated surface.

Funk & Wagnell's *New Standard Dictionary* defines the noun "stria"—curved, crooked, and intermittent gouges, of irregular depth and width and rough definition, of a certain rock-surface, sometimes due to abrasions by icebergs. It would therefore seem that the appellant's abrading-surface comes within the appellee's claims. The appellant's disk, with its abrading-surface, has a pair of rounded humps or raised portions so arranged as to be diametrically opposite and sloping downward from the circumference of the disk to the flat abrading-surface.

We are of the opinion that the appellant's rotary disk has an impelling and abrading member in a vegetable-peeling machine, which member is composed of a flat horizontal raised portion, and a raised portion extending from near the circumference inward and having two sides sloping down to the flat striated portion of the disk, thus coming within the reading of claim 1.

The appellant's disk is composed of a number of horizontally-flat striated portions, separated by raised portions at intervals extending from the circumference inward. The appellant's disk, as thus striated, comes within the phrase of claim 2. The appellant's has an impelling and abrading disk composed of the horizontally-flat striated or abrading portion, and has a rounded raised portion rising gradually from near the center toward the circumference, and it the kind of construction referred to in claim 3. Appellant's disk has a rounded raised portion, bounded by two approximately radial edges extending from near the circumference inward and having a striated surface, thus coming within the description of claim 4.

The defense that "striated" does not mean a concrete abrading-surface is not well founded. This disk, as constructed, has an abrading, impelling, and turning function. It permits of dealing successfully with a deep mass of vegetables. In other machines, but shallow layers could be dealt with. The result obtained here does not grind or bruise the vegetables, but confines its action to removing the thin outer layer of skin, and leaves the surface of the vegetable comparatively smooth, instead of pitted or hacked. Such advantages have not before been found in machines of this type, and this invention marks an advance in the art. In other words, the feature of the invention here is in the abrading-surface having rounded humps or raised portions to produce the necessary agitation and circulation of the vegetables, without which a machine of this character has been found not practical.

Such a result having been obtained, we are of the opinion that the inventor is entitled to a reasonable range of equivalents, and it would be well within such range to coat the disk with carborundum. When such a coating is accomplished, striations are formed, although the lines are broken and irregular. The variety of methods and striations would permit of such construction. (*National Hollow Brake-Beam Co.*, v. *Interchangeable Brake-Beam Co.*, 106 Fed., 693; 45 C. C. A., 544; *Cimiotti Unhairing Co.* v. *American Unhairing Co.*, 115 Fed., 498; 53 C. C. A., 230; *Hinman* v. *Visible Milker Co.*, 239 Fed., 896; 153 C. C. A., 24.)

Nor do we find in the prior art any patent which anticipates the patent in suit.

In the Buist and Schmidt patent, No. 551,526, the patentees depend upon upright wings or partitions for agitation of the mass; but it is not the same kind of agitation produced by the humps of the patent in suit. The corrugations and abutting wings, and the other hard points in the inside of the machine, are intended to scrape the skin off the vegetables. There is no kind of agitation which causes the vegetables to circulate to change position, and thus afford different sides to the paring or abrasive surface.

In the Jaeger patent, No. 524,420, the inventor depends upon spring-rasps fastened to radial boards and arranged in concentric circles. It may be that the inventor's disk of rasps would impart a rolling or turning movement to the vegetables; but there is nothing to cause the necessary circulation of the mass. The rolling or turning of the vegetables is not enough: there must be circulation

of the vegetables, and this, so that, as each layer is peeled, the next layer is brought against the disk and the performance continued, until finally the entire mass has circulated from top to bottom. The construction of the patent in suit accomplishes this, but the Jaeger patent does not do so.

For the same reason the French patent to Harff, No. 234,485, cannot be said to anticipate the patent in suit.

In the patent to Kiepenheuer, No. 74,399, there is disclosed no abrading-disk but a contrivance of knives. A knife arrangement of this kind is expressly disclaimed in the patent in suit. It may be that it would simply cut and hack the vegetables to pieces, as claimed by the appellee. It has never been in successful operation.

We think, further, that this German patent to Kiepenheuer was intended to peel but a single layer of vegetables, as distinguished from the deep mass of vegetables. The knife-blades shown in Figure 12 in the patent are arranged and shaped differently from the sloping humps of both the appellee's and appellant's structure. The blocks extend in a circumferential direction along the edge of the disk, and slope downwardly toward and along the periphery of the disk, forming a circumferential pocket between the central and highest point of the blocks and the stationary wall. The humps of the disk of the appellee and appellant extend radially in with, and slope from, the circumference toward the center; the two sides also sloping toward the main portion of the disk. We do not think that this patent anticipated the patent in suit.

It is very significant that the appellant has copied the appellee's disk, rather than make use of the patents referred to, and which are said to constitute the art prior to the date of the patent in suit. If the appellant thinks that any of the devices or improvements or combinations are protected by any of these patents of the prior art, they may still use them, notwithstanding this patent, so that the enforcement and restraint of the injunction granted herein cannot injure them. On the other hand, the failure to enforce the injunction would deprive appellee of the benefits secured to it by this patent. (*Minn. Ry. Co.* v. *Barnett & Record Co.*, 257 Fed., 302; 168 C. C. A., 386.)

(2) Since the validity of the patent was sustained by many prior adjudications, it was proper for the district judge to grant the preliminary injunction. (*Edison Electric Light Co.* v. *Beacon Vacuum, etc., Co.*, C. C., 54 Fed., 678.) And while it is true that the application for a preliminary injunction was addressed to the discretion of the court, still the patent was frequently sustained, and there was undoubted authority, since the infringement appeared clear. To refuse to exercise that discretion to the detriment of the patentee would have been error. (*Searchlight Horn Co.* v. *Sherman Clay & Co.*, 214 Fed., 99; 130 C. C. A., 575; *Weber Electric Co.* v. *Cutler-Hammer Mfg. Co.*, 256 Fed., 31; 167 C. C. A., 303.)

We think the order below was properly granted, and it will be affirmed.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

H. D. SMITH & Co. *v.* PECK, STOW & WILCOX Co.

Decided December 10, 1919.

[262 Fed. Rep., 415.]

1. PATENTS—ANTICIPATION—ANALOGOUS ART.
   The Ward patent, No. 737,179, for a screw-driver, is not anticipated by a horseshoer's hoof-parer, by a carriage-trimmer's tool, by an ice-pick and meat-maul, or by a wrench, as none of them suggest the idea in their construction of being at all adapted to a tool utility by turning on its longitudinal axis. To adapt the old devices to the new function requires modification or changes.
2. SAME—INVENTION—TEST OF INVENTION.
   Whether a patented structure involves invention is a question of fact, and the determining factor is not whether the achievement was difficult or easy, but whether it has in point of fact given the world something of value that it did not have.
3. SAME—EVIDENCE OF INVENTION.
   The willingness of the public to pay more for a patented device than for other articles of that class is a demonstration of its substantial value, and the fact that defendant copied the structure and shape of the article shows that it, too, appreciated the value of the advance made.
4. SAME—DESIGN FOR SCREW-DRIVER NOT ORNAMENTAL.
   The Ward design patent, No. 37,213, for a design for a screw-driver, *Held* invalid, as it does not impart such a pleasing effect to the eye as to create beauty or attractiveness or to make it ornamental.

APPEAL from the District Court of the United States for the District of Connecticut.

Suit in equity by H. D. Smith & Co. against the Peck, Stow & Wilcox Company. Decree for complainant, and defendant appeals. Modified and affirmed.

For opinion below, see 258 Fed., 40.

Mr. H. E. Hart for the appellant.

Mr. Archibald Cox and *Mr. Henry E. Rockwell* for the appellee.

Before WARD, ROGERS, and MANTON, Circuit Judges.

MANTON, *Cir. J.:*

The appellee now owns, by assignment, Letters Patent No. 737,179, granted August 25, 1903, for a screw-driver, and Design Letters Patent No. 37,214, of November 8, 1904, for a design for the screw-driver. Both were issued to William S. Ward. The mechanical patent was considered by this court in an action wherein the present appellee was plaintiff and the Southington Manufacturing Company was defendant. (247 Fed., 342; 159 C. C. A., 436.) In that case, however, the plaintiff agreed, by stipulation, that the patent was valid, and therefore did not contest its validity for want of invention. The defenses offered in that litigation were non-infringement and invalidity because of anticipation. It was held there that there was nothing in the prior art like the combination of this article, to wit, the screw-driver, and the defendant failed on both of its defenses, to wit, the non-infringement and anticipation because of the prior art.

(1) In this case, the appellant is not bound by

such an admission, and therefore the question of whether or not the patent discloses invention is open to it. It has also offered in evidence patents which were not in the case of *Smith* v. *Southington Mfg. Co.*, and which it contends establishes anticipation because of prior date. Likewise the defense is interposed that evidence of prior use establishes anticipation. There is a denial of infringement of the patent by use of the structure which the appellee says infringes its patent.

The district judge held that, in view of the result in this court in the case of *Smith* v. *Southington Mfg. Co.*, *supra*, it was not incumbent upon him to do more than examine such patents offered in the prior art as were not considered by this court, and such new evidence as amplified or added to the claim of anticipation due to prior use. In this we think the learned district judge was correct. The mechanical patent provides for a new make of screw-driver. Screw-drivers have existed for a long time, but in this invention we believe that the inventor gave to the world a new and better screw-driver than it has had, and thus has moved the art forward. It consists of a combination of a particular structure and a particular shape. It consists of integral solid drop-forging beginning at the top of an oval, but having a flat hammer-face, and continuing into a flat handle-web, into which scales of an elliptical shape gradually decreasing in width are riveted, continuing into a conical tapering bolster, continuing into a round shaft, ending up in a flat blade; the handle portion being elliptical in the cross-section for the most part, but gradually merging with the conical bolster by a gentle taper into a circular tool-shank, thus providing a firm grasp, while facilitating a nice control by pressure of the finger and thumb upon the shank of the tool. There has been created for it a very substantial and large demand. It commands a high price for such a tool in the market. Its shape and handles provide for turning the tool on its elliptical axis.

Two important characteristics stand out as necessary for successful use by operators: (1) It should be of such a character that the blade may be inserted in the kerf of the screw as easily and certainly as possible; and (2) provide for the application of as much power as possible to turn it. Hand-power is applied, and the hand-grip must be attained by the shape upon which the hand rests and obtains control of the tool, and is brought to bear in the turning operation. The combination must have such structural strength as to meet increased strains occasioned by the increased control and turning power. The structure provided by this integral solid drop-forging provides for wooden hand-scales so shaped as to provide the foregoing characteristic. The shape can be seen plainly by the eye and felt by the hand. In the lower part of the handle, the elliptical cross-section merges with an abrupt break into a circular cross-section, and the two then decrease in diameter until there is a comparatively small circular cross-section and then continuing down becomes still smaller and then flattens out as a blade.

(2) Whether the structure involves invention is a question of fact, and the determining factor is not whether the achievement is difficult or easy, but whether it has, in point of fact, given the world something of real value, that it did not have—a benefit conferred upon mankind. (*O'Rourke Engineering Const. Co.* v. *McMullen et al.*, 160 Fed., 933; 88 C. C. A., 115.)

This court, upon the appeal in the other litigation, considered it very useful, and pointed out that a considerable demand had arisen for it. The record here shows that 4,700,000 of these screw-drivers have been sold at a price of at least ten per cent. higher than the next-highest-priced screw-driver. This willingness of the purchasing public to pay is a practical demonstration of its substantial value. The appellant's conduct in copying the structure and shape of the appellee's structure is a strong indication that it, too, appreciates the value of this advance in the art. We conclude that the combination constitutes invention, and that the patent is valid.

We shall consider the various patents in this record which were not considered in the case of *Smith & Co.* v. *Southington Mfg. Co.*, (247 Fed., 842; 159 C. C. A., 436.) In that case, the defendant introduced the same three table-knife patents, No. 78,328, issued May 26, 1868, to Moses Rubel, No. 86,252, issued January 26, 1869, to Moses Rubel, and No. 172,874, issued February 1, 1876, to James D. Frary; the screw-driver patent, No. 267,709, issued November 21, 1892, to Philip Nadig; three wrench patents, No. 553,059, issued January 14, 1896, to Robert C. Ellrich, No. 666,029, issued January 15, 1901, to Amos Sheppard, and Design No. 34,136, issued February 26, 1901, to William S. Ward; and all were held not to anticipate the patent in suit. We adhere to the conclusion there announced. In addition to the foregoing patents, this appellant has offered and introduced three other patents, one to Franz Lehman, No. 96,928, issued November 16, 1869, for a horseshoer's hoof-parer, one to Munson, No. 104,056, issued June 7, 1870, relating to rubber-coated carriage-trimmings, and one to Conklin, No. 128,020, issued June 18, 1872, for an ice-pick and meat-maul. The ice-pick is made of a single piece of cast metal, with handle-scales attached. The carriage-trimmings tool consists of a piece of metal covered with rubber, and the hoof-parer of a curved piece of metal with a curved knife fastened to one end, and two pieces of horn riveted to either side. They have neither the structure nor the shape of the patent in suit. It is plain that none of these prior patents could provide for the patented screw-driver without modification of the things shown in the patent.

(3) It is not sufficient to constitute anticipation that the device relied upon might, by modification, be made to accomplish the function performed by the patent in question. It must be designed by the maker and adapted for the performance of such function. (*Topliff* v. *Topliff & Co.*, 145 U. S., 156; 12 Sup. Ct., 825; 36 L. Ed., 658.) The prior wrench patents to Ellrich (No. 553,059) and Sheppard (No. 666,029) do not show or suggest any part of the shape of the patented screw-driver, except only at one end of the six mentioned parts. They do not disclose or suggest either the butt at one end or any of the shape below the handle portion, where the elliptical cross-section gradually merges into a round cross-section, nor the continued contracted diameter through the conical bolster into the circular tool-shank. They lack half the combination of the article, because, if a blade is formed on the end of one of these wrenches, the device still lacks the shape, and they cannot be declared an anticipation. We shall consider the design patent to Ward later.

The tools made pursuant to the prior patents were not screw-drivers, and do not suggest the idea in their construction of being at all adapted to a tool utility by turning on its longitudinal axis. To adapt these old devices to this new function would require modification or changes, and therefore they do not anticipate. (*Hobbs* v. *Beach*, 180 U. S., 383; 21 Sup. Ct., 409; 45 L. Ed., 586; *Barry* v. *Harpoon Castor Mfg. Co.*, 209 Fed., 207; 126 C. C. A., 301.)

The improvised tools used by employees of both in their factory and at their homes were simply wrench-bars and were not anticipations. They had not become established facts, accessible to the public, in contributing definitely to the advance of the art. They had not taken their place as part of the known established art, to which the public may at any time resort. (*Ajax Metal Co.* v. *Brady Brass Co.*, C. C., 155 Fed., 409.) These tools do not suggest or show the merging of the elliptical cross-section into the circular cross-section, or the portion of the tool below that. To prove anticipation by an unpatented device, if attempted by oral testimony, the existence and use must be proven by clear, satisfactory proof and beyond a reasonable doubt. (*The Barbed Wire Patents*, 143 U. S., 275; 12 Sup. Ct., 443; 36 L. Ed., 154.) We find nothing in the prior use of the various tools, which have been offered in evidence and been considered, which warrants our concluding, beyond a reasonable doubt, that the appellee's patented structure has been anticipated by such use.

The proof of infringement is ample. The appellant's screw-driver is so near in structure and shape to the appellee's screw-driver that we are convinced of its infringement.

(4) The appellee has sued upon both patents in this action. This it may properly do. (*Eclipse Mach. Co.* v. *Harley-Davidson Motor Co.*, D. C., 244 Fed., 463.) To successfully establish the validity of the design patent, and to entitle the inventor to protection, he must establish a result obtained, which indicates, not only that the design is new, but that it is beautiful and attractive. It must involve something more than mere mechanical skill. There must be invention of design. The district judge concluded that the screw-driver is beautiful and attractive, and he says, even ornamental. We cannot, however, agree that the appellee's structure, made pursuant to this patent, has such a pleasing effect imparted to the eye as to create beauty or attractiveness, or to make it ornamental. It provides for a new utility. Design patents refer to appearance. Their object is to encourage works of art and decorations which appeal to the esthetic emotions—to the beautiful. We do not think that the device constructed by the appellee has a subject-matter for such beauty and attractiveness as is contemplated by the statutes, which permit the Patent Office to grant design patents, and conclude that the learned district judge erroneously sustained this patent.

We therefore modify the decree by affirming the result reached by the district judge as to the Letters Patent No. 737,179, granted August 25, 1903, and reverse the decree as to Design Letters Patent No. 37,214.

The decree below is thus modified and affirmed.

Changes in Classification.

(ORDER No. 2,599.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 4, 1920.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 57, Hoisting, (Division IV,) abolish subclass—

116. Raising and lowering, automatic check and release.

The patents formerly contained in this subclass have been placed for the most part in class 192, Clutches and Power-Stop Control, subclass 15, Clutch and brake, Automatic check and release, and the subclass indented thereunder, hereinafter established.

In class 74, Machine Elements, (Division XLVII,) abolish subclass—

Machine-brakes—
45. Centrifugal speed-regulators.

The patents formerly contained in this subclass have been placed for the most part in class 192, Clutches and Power-Stop Control, subclasses 103, Clutches, Operators, Speed-responsive; 104, Clutches, Operators, Speed-responsive, Fixed-speed release, and 105, Clutches, Operators, Speed-responsive, Fixed-speed engagement, hereinafter established.

In class 188, Brakes, (Division XLVII,) abolish the following subclass, with its definition:

Operaters—
Automatic—
133. Drive release.

The patents formerly contained in this subclass have been placed for the most part in class 192, Clutches and Power-Stop Control, subclass 8, Transmission control and brake, Automatic brake, Drive release, hereinafter established.

In class 208, Velocipedes, (Division VII,) abolish subclass—

Brakes—
57. Back-pedaling.

The patents formerly contained in this subclass have been placed for the most part in class 192, Clutches and Power-Stop Control, subclass 5, Transmission control and brake, Back-pedaling brake, and the subclass indented thereunder, hereinafter established.

In class 192, Clutches, (Division XLVII,) change the title of the class to read *Class 192, Clutches and Power-Stop Control*, abolish the existing subclasses, and establish in lieu thereof the following subclasses and definitions:

192.—CLUTCHES AND POWER-STOP CONTROL.

1. **Motor control and brake—**
2. Electric motor,
3. Fluid-motor.
4. **Transmission control and brake—**
5. Back-pedaling brake—
6. Hub-brake,
7. Automatic brake—
8. Drive release,
9. Electric control,
10. Belt-shipper,
11. Belt-tightener.
12. **Clutch and brake—**
13. Vehicle type,
14. Same member,
15. Automatic check and release—
16. Clutch and brake same member,
17. Peripheral brake,
18. Sliding operation,
19. Crank control.
20. **Clutch and gear—**
21. Reversing.
22. **Latch-operated—**
23. Corn-planter type,
24. Longitudinally-moving transmission member—
25. Pin,
26. **Transversely-moving transmission member—**
27. Ball or roller,
28. Positive—
29. Rotating key.
30. **Clutches—**
31. Automatic—
32. Manual control—
33. Definite-position release,
34. Shaft-thrust,
35. Pilot mechanism—
36. Brake-band,
37. Transversely moving—
38. Ball or roller,
39. Positive,
40. Electric,

192.—CLUTCHES AND POWER-STOP CONTROL—Continued.

Clutches—
Automatic—
41. One-way engaging—
42. Free-engine type,
43. Reversible—
44. Ball or roller,
45. Ball or roller.
46. Positive,
47. Manual control,
48. Multiple—
49. Parallel vehicle-wheels—
50. Free wheel,
51. Reversing,
52. Progressive engagement—
53. Frictional and positive,
54. Torque-responsive—
55. Yielding,
56. Release on overload,
57. Fluent material and mechanical,
58. Fluent material—
59. Axially-movable piston,
60. Transversely-movable piston,
61. Gear-pump type,
62. Plow-lifting type,
63. Free-engine type,
64. Velocipede free wheel,
65. Axially and transversely engaging,
66. Axially engaging—
67. Positive,
68. Opposed,
69. Multiple disk,
70. Spreading,
Transversely engaged—
71. Positive,
72. Interior and exterior—
73. Opposing,
74. Interior—
75. Expanding—
76. Radial,
77. Split ring—
78. Cam-operated,

192.—CLUTCHES AND POWER-STOP CONTROL—Continued.

Clutches—
Transversely engaged—
79. Exterior—
80. Strap—
81. Multiple folds,
82. Operators—
83. Multiple,
84. Electric,
85. Fluid-pressure—
86. Double-acting,
87. Multiple clutches,
88. Flexible motor,
89. Spring or weight—
90. Electric release,
91. Fluid release,
92. One-direction apply and release,
93. Cam,
94. Screw,
95. Hand-wheel,
96. Central pin—
97. Screw-operated,
98. Shipper-saddles,
99. Lever systems,
100. Follow-up,
101. Releasing,
102. Check of driven member,
103. Speed-responsive—
104. Fixed-speed release,
105. Fixed-speed engagement,
106. Release.
Elements—
107. Engaging—
108. Positive,
109. Thrust members, retarders, and stops,
110. Shafts, bearings, and adjusting devices,
111. Wear-compensators,
112. Casings,
113. Lubricating and cooling.
114. Locks,
115. Supports.

R. F. WHITEHEAD, *Acting Commissioner.*

Changes in Classification.

(ORDER No. 2,600.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 5, 1920.

It is hereby directed that class 176, Electric Lamps, be transferred from Division XXXVII to Division XLII, to take effect immediately.

R. F. WHITEHEAD,
Acting Commissioner.

Changes in Classification.

(ORDER No. 2,601.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 10, 1920.

It is hereby directed that class 267, Spring Devices, be transferred from Division XI to Division XLV; class 47, Trees, Plants, and Flowers, from Division I to Division II; class 156, Curtains, Shades, and Screens, from Division II to Division XLVI, to take effect immediately.

R. F. WHITEHEAD,
Commissioner.

INDEX

TO THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

AUGUST, 1920.

[Opinion of the Solicitor of the Department of the Interior is indicated by a degree-mark (°), the decisions of the Court of Appeals of the District of Columbia by a star (*), and of the United States Circuit Court of Appeals by the letter ᵈ.]

ADOPTION AND USE.

See Trade-Marks, 3, 7.

AFFIDAVITS UNDER RULE 75.

See Interference, 3.

ACCESS TO.

Where claims forming the issue of an interference had been rejected in view of a prior patent and the rejection withdrawn by the Examiner in view of affidavits filed under Rule 75, which were then sealed up, upon motion to dissolve, alleging non-patentability in view of such patent, it was not error for the Patent Office to refuse access by the moving party to such affidavits, since the issue raised by the affidavits—patentability—was one in which the moving party had no interest in the interference proceeding. * Erben *v.* Yardley, 396.

CLASS OF MERCHANDISE.

See Trade-Marks, 3, 5.

CONCEPTION OF INVENTION.

See Priority of Invention.

CONCURRENT DECISIONS OF THE TRIBUNALS OF THE PATENT OFFICE.

INTERFERENCE—ERROR.

Where the line which separates the respective contentions of the parties to an interference is quite attenuated and not easily perceived and the just consideration of the case calls for expert knowledge, the concurring decisions of the Patent Office tribunals will not be disturbed by the court except where error very clearly appears. * Blaine *v.* White, 787.

CONFUSION OF THE PUBLIC.

See Trade-Marks, 3.

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

PATENTABILITY—USE IN NEW DEVICE OF CONSTRUCTION PREVIOUSLY USED IN REPAIR JOBS.

Where in the use of steel cars having longitudinal sills it was found that the sill was often broken between the end of the car and the body-bolster by reason of collision or buffing and it was the practice to repair such breaks by removing the end of the sill beyond the break and splicing an end section to the main body of the sill, claims of the Bellows patent, No. 693,218, covering a car provided with a sill with a sectional end spliced to the body at a point between the body-bolster and the end, *Held* invalid because devoid of invention, as it involves only the idea of using for new cars a construction theretofore used in repair jobs. (*National Harrow Co. v. Quick*, 74 Fed. Rep., 236.)

[4 Bellows and Black *v.* New York Central Railroad Company; Same *v.* Pressed Steel Car Company, 585.

CONSTRUCTION OF TRADE-MARK STATUTES.

See Trade-Marks, 1, 2, 3, 4.

CONTINUATION OF APPLICATIONS.

1. CONTINUING—DEFINED.

A continuing application is one filed subsequently to another, while the prior application is pending, disclosing all or a substantial part of the subject-matter of the prior application and containing claims to subject-matter common to both applications, both being filed by the same inventor or his legal representative. [*Ex parte* Hall, 395.

2. SUBSTITUTE APPLICATION FILED AFTER ABANDONMENT OF ORIGINAL.

Where H. filed an application which was allowed, forfeited, renewed, and again allowed and where after the time within which a second renewal could have been filed he filed a second application for the same subject-matter, *Held* that the second application could not be regarded as a continuation of the first. [Id.

DOUBLE PATENTING.

PATENTS—PROCESS AND PRODUCT.

A patent for a commutator comprising metal commutator-bars and a body of heat-hardened resinous condensation product holding said bars in place is not a bar to the allowance to the same inventor of a patent for the process of producing the article, involving the conception of softening the moldable material, positioning the bars radially and longitudinally, and forming a complete insulating-body simultaneously under heat and pressure, which was foreign to the processes of the prior art. [*In re* Zenk, 183.

INTERFERENCE.

See Affidavits Under Rule 75; Concurrent Decisions of the Tribunals of the Patent Office; Priority of Invention; Trade-Marks, 9.

1. DISCLOSURE BY ONE CONTESTANT TO THE OTHER.
In an interference between S. and P. relating to a process of making stencil-paper for use with a sensitized photographic film and to the article made by such process *Held* the evidence of disclosure by S. to P. only proved disclosure of the result to be accomplished rather than the specific article of the issue and the process of producing the same. [*Pembroke v. Sulzer, 396.

2. ISSUE THAT OF PRIORITY ONLY.
In an interference contest the only question involved on appeal to the Court of Appeals of the District of Columbia is that of priority of invention between the parties, the losing party having no standing to contend that the issue is not patentable, that a third party was the prior inventor, or that there is a statutory bar to the issuance of a patent. [*Erben v. Yardley, 396.

3. REOPENING AFTER APPEAL TO COMMISSIONER TO TAKE FURTHER PROOFS.
In an interference between B. and M., in which the question was one of originality, where, after hearing on appeal to the Commissioner from a decision of the Examiners-in-Chief awarding priority to M., B. filed a motion to reopen the interference to take the testimony of M., supporting the motion by affidavits executed by M. to the effect that B. disclosed the invention to him, it was error to refuse the motion to reopen.
[*Bruckman *v.* Miller, 787.

4. SAME—POWER OF COMMISSIONER TO REOPEN INTERFERENCE TO TAKE ADDITIONAL TESTIMONY.
Interference proceedings are of an equitable nature, and so long as a case is pending in the Patent Office it is within the supervision of the Commissioner, who is charged with the duty of seeing that full justice is done, and he may, under his supervisory power, order a case reopened for the taking of additional testimony. [*Id.

5. SAME—ORIGINALITY.
In an interference between B. and M., involving the question of originality, evidence considered and *Held* that B. disclosed the invention in issue to M. [*Id.

INTERSTATE COMMERCE.

See Trade-Marks, 3, 8, 9.

INVENTION.

See Construction of Specifications and Patents.

1. PATENTABILITY—ELECTRICAL HEATING UNIT.
Where the prior art disclosed in one patent an electrical heating unit consisting of a series of separate resistance-coils formed of a double spiral wound in conical form, each coil being joined to the next by a binding-post, another patent disclosed a heater having a series of coils of a continuous piece of wire, and others disclosed heating-coils of a single spiral, the wire being led back through the coil, *Held* that no invention was involved in modifying the first-named construction by making the wire continuous and winding the coils in a single instead of a double spiral in view of the other references. [*Ex parte* Kuhn and Shallor, 585.

2. TEST OF.
Whether a patented structure involves invention is a question of fact, and the determining factor is not whether the achievement was difficult or easy, but whether it has in point of fact given the world something of value that it did not have.
[d H. D. Smith & Co. *v.* Peck, Stow & Wilcox Co., 981.

3. EVIDENCE OF.
The willingness of the public to pay more for a patented device than for other articles of that class is a demonstration of its substantial value, and the fact that defendant copied the structure and shape of the article shows that it, too, appreciated the value of the advance made. [dId.

PARTICULAR PATENTS.

See Construction of Specifications and Patents.

1. BELLOWS—No. 693,218—STEEL CAR.
The Bellows patent, No. 693,218, for a steel car, claims 2 and 3 *Held* void in view of prior uses.
[d Bellows and Slack *v.* New York Central Railroad Company; Same *v.* Pressed Steel Car Company, 585.

2. ROBINSON—No. 809,582—VEGETABLE-PEELING MACHINE—INFRINGED.
Claims of the Robinson patent, No. 809,582, for a vegetable-peeling machine, including a rotary disk having a horizontal striated portion. *Held*, infringed by a peeling-machine having an abrading-disk of concrete or cement, the latter being considered as having striations set irregularly.
[d Imperial Machine & Foundry Corporation *v.* G. S. Blakeslee & Co., 979.

3. WARD—No. 737,179—SCREW-DRIVER—NOT ANTICIPATED.
The Ward patent, No. 737,179, for a screw-driver, is not anticipated by a horseshoer's hoof-parer, by a carriage-trimmer's tool, by an ice-pick and meat-maul, or by a wrench, as none of them suggest the idea in their construction of being at all adapted to a tool utility by turning on its longitudinal axis. To adapt the old devices to the new function requires modification or changes.
[dH. D. Smith & Co. *v.* Peck, Stow & Wilcox Co., 981.

4. SAME—DESIGN—No. 37,213—SCREW-DRIVER—INVALID.
The Ward design patent, No. 37,213, for a design for a screw-driver, *Held* invalid, as it does not impart such a pleasing effect to the eye as to create beauty or attractiveness or to make it ornamental. [d Id.

PRIORITY OF INVENTION.

See Interference, 2, 3, 5.

AWARDED TO FIRST TO CONCEIVE AND REDUCE TO PRACTICE.
In an interference contest a finding that one of the parties was prior to the other in conception and reduction to practice is a sufficient basis for an award of priority to him. In this proceeding it is unnecessary to determine what right either party ultimately might have to a patent, the only question involved being that of priority between the parties to the interference.
[*Erben *v.* Yardley, 396.

RIGHT TO PATENT.

See Priority of Invention.

RIGHTS OF HOLDER OF LEGAL TITLE OF PATENT.

TO PROSECUTE APPEAL INDEPENDENT OF EXCLUSIVE LICENSEE.
Where suit was brought by the legal owner of a patent, joined with an exclusive licensee holding a license containing a provision that if the patent should be held invalid or should be held to infringe other patents the licensee should have the right to surrender the agreement and should not thereafter be obliged to pay royalties, and the district court held the patent invalid, upon refusal of the licensee to appeal the legal owners have sufficient interest in maintaining the validity of the patents to entitle them to prosecute an appeal, although the patent had expired and no injunction could be granted.

TESTIMONY.

See Interference, 3, 4.

TRADE-MARKS.

1. ACT OF MARCH 19, 1920, CONSTRUED—MARKS REGISTRABLE UNDER ACT OF 1905 NOT REGISTRABLE UNDER SECTION (*b*).
Marks which are registrable under the Trade-Mark Act of February 20, 1905, are not registrable under section (*b*) of the act of March 19, 1920.
[* Opinion of the Solicitor of the Department of the Interior, 181.

2. SAME—MARKS NOT REGISTRABLE UNDER SECTION (*b*).
In the act of March 19, 1920, providing that the Commissioner shall keep a register of "(*b*) all other marks not registrable under the act of February 20, 1905, as amended, except those specified in paragraphs (*a*) and (*b*) of section 5 of that act," etc., the provision "except those specified in paragraphs (*a*) and (*b*)" was intended to include those scheduled under (*a*) as consisting of or comprising immoral and scandalous matter and those scheduled under (*b*), consisting of or comprising the flag or coat-of-arms or other insignia of the United States, States, municipalities, or foreign nations and designs, etc., adopted by fraternal and other societies.
[* Id.

3. SAME—PROVISO CLAUSE OF SECTION 1 (*b*) CONSTRUED.

The proviso clause of section 1 (*b*) of the act of March 19, 1920, construed as if it read: "*Provided*, That trade-marks which are *so nearly* identical with a known trade-mark owned and used in interstate and foreign commerce, or commerce with the Indian tribes by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers, shall not be placed on this register." [* Id.

4. SAME—TRANSFER OF FILING FEE FROM ONE APPLICATION TO ANOTHER.

The filing fee of ten dollars paid in connection with an application filed under the act of February 20, 1905, may be transferred to an application for registration under the act of March 19, 1920. [* Id.

5. SAME—SIMILARITY—"RAY - O - LITE" and "PREST - O - LITE."

The word "Ray-O-Lite," for storage batteries, *Held* not registrable in view of the prior use of "Prest-O-Lite" on the same goods. [* French Battery & Carbon Company *v.* The Prest-O-Lite Company, Inc., 182.

6. SAME—SAME—REGISTRATION BY OTHERS OF SIMILAR MARKS.

Held that "Ray-O-Lite" may be registered for electric lamps notwithstanding the prior use by the opposer of "Prest-O-Lite" on storage batteries where other marks about as near to "Prest-O-Lite" as is "Ray-O-Lite" had been registered by others for electric lamps prior to its use by the opposer for storage batteries. [* Id.

7. "PREST-O-LITE"—RIGHT TO PREVENT REGISTRATION OF "PLAY-O-LITE" IN FIELD OCCUPIED BY SIMILAR MARKS.

Where opposer adopted the mark "Prest-O-Lite" in 1904 for use on gas-tanks and did not extend its use to storage batteries until 1915, it is not entitled to successfully maintain opposition to the registration of "Play-O-Lite," adopted by applicant in 1917 for electric lamps, where others had adopted and used the words "Linolite," "Tubolite," "Portalite," and "Pract-El-Lite" prior to opposer's extension of its mark to storage batteries and had registered the same.

[* The Prest-O-Lite Company, Inc., *v.* Play-O-Lite Company, Inc., 790.

8. USE NECESSARY TO ESTABLISH RIGHT TO REGISTRATION.

Use of a trade-mark in interstate commerce or in commerce with foreign nations or with Indian tribes is a prerequisite to its registration, and the use contemplated is use by the applicant himself or by some one for him and not an independent or incidental use by a third party. Hence where persons outside the State of California, where appellee was doing business, procured appellee's goods in California and had them sent outside that State appellee could take no benefit from such transaction, and the business being otherwise local appellee failed to show the requisite use.

[*H. Kuhn & Sons (Inc.) *v.* Letts, 791.

9. EVIDENCE OF INTERSTATE USE—SUFFICIENCY—TAKING ADDITIONAL TESTIMONY.

Where in a trade-mark interference proceeding, an applicant is refused permission by the Commissioner to take further testimony to prove interstate commerce on the ground that the testimony in the case shows such use, and on appeal the court concluded that the testimony is insufficient for this purpose, although such use is alleged in the declaration, *Held* that the denial of the request to take further testimony was error, and the case reversed and remanded with directions to permit the introduction of the same. [*Id.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF AUGUST, 1920.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Acid, Production of sulfuric. K. B. Quinan. No. 1,348,736; Aug. 3; v. 277; p. 117.
Adder, Listing. W. M. Holloway. No. 1,348,564; Aug. 3; v. 277; p. 84.
Adjustable die. A. A. Gericke. No. 1,348,403; Aug. 3; v. 277; p. 54.
Adjustable support. G. L. Knights. No. 1,348,569; Aug. 3; v. 277; p. 85.
Aeroplane. J. F. Webb, Sr. No. 1,348,463; Aug. 3; v. 277; p. 65.
Aeroplane control. V. De Dominicis and F. A. Reip. No. 1,348,548; Aug. 3; v. 277; p. 81.
Agricultural implement. J. Versteeg. No. 1,348,255; Aug. 3; v. 277; p. 25.
Air and gas mixer. A. W. Elling. No. 1,348,272; Aug. 3; v. 277; p. 28.
Airplane construction. F. J. Plym. No. 1,348,374; Aug. 3; v. 277; p. 48.
Airplane safety attachment. R. P. Fox. No. 1,348,704; Aug. 3; v. 277; p. 111.
Alarm: *See*—
Burglar-alarm.
Aluminum and its alloys, Deoxidizing. A. Strasser. No. 1,348,458; Aug. 3; v. 277; p. 64.
Animal-trap. E. E. Rodgers, A. W. Wenger, and C. M. Rodgers. No. 1,348,449; Aug. 3; v. 277; p. 63.
Antirattler. H. C. Maise. No. 1,348,232; Aug. 3; v. 277; p. 20.
Armor, Bullet-proof. G. O. Brewster. No. 1,348,204; Aug. 3; v. 277; p. 14.
Ash-discharge mechanism. F. T. and J. M. Nicholson. No. 1,348,659; Aug. 3; v. 277; p. 103.
Automobile-body construction, Convertible. L. Bresin. No. 1,348,624; Aug. 3; v. 277; p. 96.
Automobile-jack. J. S. Cook. No. 1,348,627; Aug. 3; v. 277; p. 97.
Automobile-lock. T. H. Simpson. No. 1,348,453; Aug. 3; v. 277; p. 63.
Automobile-lock. C. C. Trosien. No. 1,348,337; Aug. 3; v. 277; p. 41.
Automobile-signal. S. M. Pontiere. No. 1,348,182; Aug. 3; v. 277; p. 10.
Automobile-signal devices, Circuit-closer for. C. Solie. No. 1,348,454; Aug. 3; v. 277; p. 63.
Automobile-top. E. Spiegel. No. 1,348,593; Aug. 3; v. 277; p. 90.
Automobiles, Device for repairing fenders. F. A. Briggs. No. 1,348,625; Aug. 3; v. 277; p. 96.
Automobiles, Door-holding device for. E. A. Boyer. No. 1,348,260; Aug. 3; v. 277; p. 26.
Automobiles, Lens for. W. H. Zorger. No. 1,348,618; Aug. 3; v. 277; p. 95.
Autosled. R. C. Menzies. No. 1,348,436; Aug. 3; v. 277; p. 60.
Bag-filling machine. C. F. Sparks. No. 1,348,592; Aug. 3; v. 277; p. 90.
Bags, Wire-tying. A. M. Bates. No. 1,348,346; Aug. 3; v. 277; p. 43.
Bait, Artificial. P. Viehweger. No. 1,348,670; Aug. 3; v. 277; p. 105.
Baling-presses, Binding attachment for. W. H. Leavitt. No. 1,348,180; Aug. 3; v. 277; p. 9.
Banjo. W. L. Lange. No. 1,348,652; Aug. 3; v. 277; p. 101.
Bathtub. G. C. Strachan. No. 1,348,250; Aug. 3; v. 277; p. 24.
Batteries, System for charging storage. T. L. Mount. No. 1,348,236; Aug. 3; v. 277; p. 21.
Battery-plate. A. J. Adams. No. 1,348,467; Aug. 3; v. 277; p. 66.
Bearing, Quick-adjusting. W. M. France and L. B. Jones. No. 1,348,705; Aug. 3; v. 277; p. 111.
Bearing, Rocker-stud. W. T. Thacker. No. 1,348,602; Aug. 3; v. 277; p. 92.
Bearings and limbering up motors, Machine for burning in. A. O. White. No. 1,348,611; Aug. 3; v. 277; p. 94.
Bed, Adjustable inclined. V. M. Broun. No. 1,348,779; Aug. 3; v. 277; p. 125.
Bed and collapsible chair combination, Telescopical. J. Chomos. No. 1,348,481; Aug. 3; v. 277; p. 68.
Bed, Convertible table-. J. M. McGhee. No. 1,348,572; Aug. 3; v. 277; p. 86.
Bed-frame, Foldable. P. J. de Does. No. 1,348,156; Aug. 3; v. 277; p. 5.
Bed or attachment therefor. M. C. Nixon. No. 1,348,820; Aug. 3; v. 277; p. 132.
Beds, furniture, and the like, Post and side bars of. S. B. Gamble. No. 1,348,707; Aug. 3; v. 277; p. 111.
Belt-fastener. F. D. Schilling. No. 1,348,747; Aug. 3; v. 277; p. 118.
Belt-tightener. C. L. Rayfield. No. 1,348,183; Aug. 3; v. 277; p. 10.
Bidet. D. A. Ruffman. No. 1,348,518; Aug. 3; v. 277; p. 75.
Bit: *See*—
Drill-bit.
Block: *See*—
Floor and paving block. Paving-block.
Board: *See*—
Plaster-board.
Boat, Underwater. J. A. Archibald. No. 1,348,686; Aug. 3; v. 277; p. 108.
Boiler: *See*—
Oil-burning boiler. Steam-boiler.
Boilers, Flexible staybolt for steam-. A. C. Negus. No. 1,348,657; Aug. 3; v. 277; p. 103.
Bolt. J. R. McKinley. No. 1,348,727; Aug. 3; v. 277; p. 115.
Bolting-up device. J. W. Warren. No. 1,348,339; Aug. 3; v. 277; p. 41.
Boots and shoes and making same, Innersole for. J. L. Hawkins. No. 1,348,644; Aug. 3; v. 277; p. 100.
Bottle-closure. B. Emrick. No. 1,348,273; Aug. 3; v. 277; p. 29.
Bottle holder and cooler, Milk-. G. V. Oberman. No. 1,348,661; Aug. 3; v. 277; p. 103.
Bow-fastener. R. Giraudias. No. 1,348,795; Aug. 3; v. 277; p. 128.
Box: *See*—
Collapsible box. Savings safety-box.
Groceryman's box.
Box-strap-applying mechanism. E. Dietze. No. 1,348,270; Aug. 3; v. 277; p. 25.
Box-strap-fastening means. E. Dietze. No. 1,348,271; Aug. 3; v. 277; p. 28.
Box-wrapping apparatus, Extension-bottom-. A. J. Morrison. No. 1,348,369; Aug. 3; v. 277; p. 47.
Boxes, Machine for making. C. F. Wright. No. 1,348,197; Aug. 3; v. 277; p. 12.
Bracket: *See*—
Insulator-bracket. Supporting-bracket.
Brake: *See*—
Truck-brake.
Brake apparatus. A. F. Klasing. No. 1,348,282; Aug. 3; v. 277; p. 30.
Breech mechanism. H. J. Stambaugh and G. M. McCann. No. 1,348,594; Aug. 3; v. 277; p. 90.
Brush, Fountain-. W. J. Wright. No. 1,348,681; Aug. 3; v. 277; p. 107.
Burglar-alarm, Mechanical. G. G. Shiloff. No. 1,348,378; Aug. 3; v. 277; p. 49.
Burner: *See*—
Gas-burner. Oil-burner.
Burner. S. W. Morrow. No. 1,348,574; Aug. 3; v. 277; p. 86.
Butter container and cutter. T. Kaskouras. No. 1,348,805; Aug. 3; v. 277; p. 129.
Button-attaching machine. B. T. Leveque. No. 1,348,229; Aug. 3; v. 277; p. 20.
Button, Collar-. P. A. Rontey. No. 1,348,450; Aug. 3; v. 277; p. 63.
Button-cutting machines, Chuck for. G. E. Wahl. No. 1,348,190; Aug. 3; v. 277; p. 11.
Button, Garment-. S. W. Cushman. No. 1,348,629; Aug. 3; v. 277; p. 97.
Button-snap. L. S. Davis. No. 1,348,699; Aug. 3; v. 277; p. 110.
Cabinet and table, Combined. T. H. E. Hathaway. No. 1,348,220; Aug. 3; v. 277; p. 18.
Cabinet, Drill-. F. M. Pearman. No. 1,348,732; Aug. 3; v. 277; p. 116.
Cabinet, Hotel or restaurant. E. Washington. No. 1,348,461; Aug. 3; v. 277; p. 64.
Calculating-machine. V. J. Odhner. No. 1,348,575; Aug. 3; v. 277; p. 86.
Calculating-machine. V. J. Odhner. No. 1,348,576; Aug. 3; v. 277; p. 87.
Calendar-hanger. P. Siewenie. No. 1,348,245; Aug. 3; v. 277; p. 23.
Camera, Reflex focal-plane. M. B. Boyce. No. 1,348,778; Aug. 3; v. 277; p. 125.

Can: *See*—
Ice-can.
Can. J. Dister. No. 1,348,550; Aug. 3; v. 277; p. 81.
Can-boxing machine. H. G. Dewey. No. 1,348,549; Aug. 3; v. 277; p. 81.
Can-closing machine. A. L. Kronquest and J. C. Tallaferro. No. 1,348,650; Aug. 3; v. 277; p. 101.
Can-end-lining machine. C. W. Graham. No. 1,348,560; Aug. 3; v. 277; p. 83.
Can-opener. M. S. Dickson. No. 1,348,484; Aug. 3; v. 277; p. 69.
Can-opener. R. M. Stewart. No. 1,348,760; Aug. 3; v. 277; p. 121.
Can opener, cover, and dispenser, Combined. W. F. Simmons. No. 1,348,519; Aug. 3; v. 277; p. 75.
Cans and conduit-bushings, Closure for. V. E. Randall. No. 1,348,317; Aug. 3; v. 277; p. 37.
Cans, Closure for sanitary. A. Johnson. No. 1,348,567; Aug. 3; v. 277; p. 85.
Cans, Identification-marker for receptacles such as milk-. R. F. Combs. No. 1,348,628; Aug. 3; v. 277; p. 97.
Canning process. J. L. Kivlan. No. 1,348,808; Aug. 3; v. 277; p. 130.
Candy-wrapper. W. S. Stoner. No. 1,348,761; Aug. 3; v. 277; p. 121.
Cane-cutter, Rotary. W. Searby. No. 1,348,751; Aug. 3; v. 277; p. 119.
Car construction, Side-door-. O. T. and W. B. Gregg. No. 1,348,170; Aug. 3; v. 277; p. 7.
Car-coupling. O. C. Billman. No. 1,348,776; Aug. 3; v. 277; p. 124.
Car-coupling. B. D. Lockwood and G. A. Suckfield. No. 1,348,501; Aug. 3; v. 277; p. 72.
Car-door construction, Railway-. C. C. Murphy. No. 1,348,237; Aug. 3; v. 277; p. 22.
Car-end reinforcement. J. M. Coleman. No. 1,348,482; Aug. 3; v. 277; p. 69.
Car, Metal-transfer. E. J. Reilly. No. 1,348,319; Aug. 3; v. 277; p. 38.
Car, Railway-. S. Otis. No. 1,348,515; Aug. 3; v. 277; p. 74.
Car, Tank-. G. H. Gibson. No. 1,348,404; Aug. 3; v. 277; p. 54.
Car-wheels for all kinds of vehicles, Journal for. H. Frappart. No. 1,348,400; Aug. 3; v. 277; p. 53.
Cars, Apparatus for change speed of motor-. S. Tamura and M. Watanabe. No. 1,348,251; Aug. 3; v. 277; p. 24.
Cars, Automatic clutch-differential for motor-. R. W. A. Warren. No. 1,348,673; Aug. 3; v. 277; p. 105.
Cars, Bumping-post for freight-. E. Keebler. No. 1,348,223; Aug. 3; v. 277; p. 18.
Carbazole, Purification of. W. Kirby. No. 1,348,722; Aug. 3; v. 277; p. 114.
Carbureters, Shut-off device for. G. E. Kipp. No. 1,348,226; Aug. 3; v. 277; p. 19.
Card-suspending device. W. C. Cutler. No. 1,348,546; Aug. 3; v. 277; p. 81.
Carpet and rug fastener. T. W. Burn. No. 1,348,149; Aug. 3; v. 277; p. 3.

Sweaters, neckwear, caps, booties, &c. Pearl Knitting Co. No. 120,244; Aug. 3; v. 277; p. 157.
Syrup, Table-. Penick & Ford, Ltd. No. 132,556; Aug. 3; v. 277; p. 164.
Tablet, Kidney, liver, and bladder. H. A. Foster. No. 126,720; Aug. 3; v. 277; p. 153.
Tablets and blank books, Writing, &c. J. C. Blair Company. No. 111,128; Aug. 3; v. 277; p. 146.
Thread and yarn, Cotton, worsted, mohair, and silk. The Salt's Textile Manufacturing Company. No. 132,325; Aug. 3; v. 277; p. 164.
Threads and yarns, Natural and artificial silk. The H. K. H. Silk Co. of New York. No. 131,168; Aug. 3; v. 277; p. 160.
Ties, Bow-. A. Blattner. No. 132,039; Aug. 3; v. 277; p. 163.
Tire accessories, Automobile-. East End Tire Company. No. 116,201; Aug. 3; v. 277; p. 147.
Tire casings and tubes, Rubber vehicle-. The United Rubber Company. No. 132,278; Aug. 3; v. 277; p. 163.
Tires and inner tubes, Rubber automobile. Dryden Rubber Company. No. 130,527; Aug. 3; v. 277; p. 159.
Tires and inner tubes, Pneumatic rubber. The Ohio State Rubber Tire Co. No. 129,277; Aug. 3; v. 277; p. 158.
Tires, casings, and tubes, Rubber vehicle-. Lincoln Tire & Rubber Co. No. 131,179; Aug. 3; v. 277; p. 160.
Toilet preparations. Brown Chemical Co. No. 127,353; Aug. 3; v. 277; p. 155.
Toilet water, soda, lump-starch, &c. Grand Union Tea Co. No. 124,890; Aug. 3; v. 277; p. 152.
Toy bowling-game apparatus. R. L. Lloyd. No. 127,295; Aug. 3; v. 277; p. 154.
Transmissions and brakes, Fabric linings for. Advance Automobile Accessories Corp. No. 113,221; Aug. 3; v. 277; p. 146.
Treatment for sore soft bleeding gums, loose teeth, &c., Astringent. E. Cureton. No. 119,821; Aug. 3; v. 277; p. 148.
Treatment, Pile. Davies, Rose & Co. No. 122,348; Aug. 3; v. 277; p. 150.
Veneer and stay-tapes, Gummed and ungummed paper-sealing. Chicago Gum Tape Company. No. 130,049; Aug. 3; v. 277; p. 160.
Waists, Ladies' and misses' outer. J. R. Waist & Dress Co. No. 131 757; Aug. 3; v. 277; p. 162.
Waists, sweaters, underwear, &c., Women's. I. Abram. No. 132,590; Aug. 3; v. 277; p. 164.
Waterproof fabrics in the piece. C. Kenyon Company. No. 131,737; Aug. 3; v. 277; p. 162.
Worm-syrup. John L. Newkirk Company. No. 127,974; Aug. 3; v. 277; p. 155.
Woven, knitted, netted, textile, and pile fabrics in the piece. Cheney Brothers. No. 133,652; Aug. 3; v. 277; p. 166.
Yarn and threads. Finlayson, Bousfield & Co. No. 125,954; Aug. 3; v. 277; p. 153.
Yeast. Cereal Products Refining Company. No. 121,749; Aug. 3; v. 277; p. 149.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 3, 1920.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 14: 1,348,161
45: 1,348,544
1,348,711
2— 34: 1,348,754
98: 1,348,327
4— 5: 1,348,662
1,348,790
18: 1,348,372
25: 1,348,518
27: 1,348,250
5— 12: 1,348,779
17: 1,348,572
41: 1,348,481
43: 1,348,820
49: 1,348,156
55: 1,348,707
56: 1,348,426
7— 3: 1,348,694
8— 5: 1,348,167

137: 1,348,593
299— 114: 1,348,631
302— 22: 1,348,603
59: 1,348,561
305— 4: 1,348,818

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 10TH DAY OF AUGUST, 1920.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Adams & Westlake Company, The. (See Krohn, Nels, assignor.)
Adams, Edward M., assignor to M. H. Petigor, New York, N. Y. Dispensing-pump and mixer. No. 1,349,543; Aug. 10; v. 277; p. 328.
Adams, William A. (See Skublin, Charles P., assignor.)
Adelsperger, Dow L., assignor to The Bauer Brothers Company, Springfield, Ohio. Method of and apparatus for treating cotton-seed. No. 1,349,034; Aug. 10; v. 277; p. 227.
Ainsworth, William A., Utica, N. Y. Dyeing-machine. No. 1,348,974; Aug. 10; v. 277; p. 215.
Aktiebolaget Svenska Kullagerfabriken. (See Olsson, Nils J., assignor.)
Albee, Honestus M., Nutley, N. J. Machine for carving, routing, and similar operations. No. 1,349,250; Aug. 10; v. 277; p. 271.
Alden, Herbert W., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Tractor. No. 1,349,249; Aug. 10; v. 277; p. 270.
Alder, Frederick T., Mt. Vernon, N. Y. Vehicle wheel and spoke. No. 1,349,035; Aug. 10; v. 277; p. 227.
Allen, Lewis H., West Springfield, Mass. Sterilizing device. No. 1,348,837; Aug. 10; v. 277; p. 189.
Alstad, George C., Chicago, Ill. Compressed-air power-drive. No. 1,349,030; Aug. 10; v. 277; p. 227.
Altaffer, John F., Aline, Okla. Rail-tie. No. 1,349,310; Aug. 10; v. 277; p. 282.
Amdursky, Samuel S. (See Steinmetz, Robert, assignor.)
American Auto Alarm, The. (See Morgan, Lewis H., assignor.)
American Brake Company, The. (See Burton, Thomas L., assignor.)
American Optical Company. (See Herbert, Pitt H., assignor.)
American Paper Bottle and Can Company. (See Stephenson, Leonard D., assignor.)
American Telephone and Telegraph Company. (See Toomey, John F., assignor.)
American Well Works, The. (See Chapman, Matthew T. and M. C., assignors.)
Amstutz, Noah S. (See Simpson, David J., assignor.)
Anderson, Albert O. (See Bradley, Jacob A., assignor.)
Anderson Electric Specialty Company. (See Anderson, Ernst G. K., assignor.)
Anderson, Ernst G. K., assignor to Anderson Electric Specialty Company, Chicago, Ill. Actuating member for switches. No. 1,349,251; Aug. 10; v. 277; p. 271.
Anderson, Hans. (See Lund, J. M., and Anderson.)
Anderson, James B., Philadelphia, Pa. Mine pulley or roller. No. 1,349,183; Aug. 10; v. 277; p. 257.
Angel, John H., Minneapolis, Minn. Press-plate. No. 1,349,544; Aug. 10; v. 277; p. 328.
Annable, Lee V., assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio. Vehicle-wheel with demountable rim. No. 1,348,975; Aug. 10; v. 277; p. 215.
Anthony, Joseph L., assignor to Weir Stove Company, Taunton, Mass. Stove-door. No. 1,348,838; Aug. 10; v. 277; p. 189.
Antman, Israel, New York, N. Y. Machine for measuring and cutting ribbon. No. 1,348,976; Aug. 10; v. 277; p. 216.
Arnold, Harold D., East Orange, N. J., assignor to Western Electric Company, New York, N. Y. Method of and means for utilizing thermionic currents. No. 1,349,252; Aug 10; v. 277; p. 271.
Ash, Frederick J., Phoenixville, Pa. Stocking-holding device. No. 1,348,922; Aug. 10; v. 277; p. 205.
Asman, Henry, Evansville, Ind. Combined double-ended sled and wagon. No. 1,349,311; Aug. 10; v. 277; p. 282.
Associated Engines Company. (See Gruenfeld, Julius J., Jr., assignor.)
Associated Engineers Company. (See Tillson, Edwin D., assignor.)
Astrom, John, assignor to Fort Wayne Engineering & Manufacturing Co., Fort Wayne, Ind. Valve. No. 1,349,253; Aug. 10; v. 277; p. 271.
Aurora Door Hanger & Specialty Company. (See Weis, Paul B., assignor.)
Austin, Walter S., Pittsburgh, Pa. Nurling-tool. No. 1,349,254; Aug. 10; v. 277; p. 271.
Auto Ordnance Corporation. (See Payne, Oscar V., assignor.)
Auto Ordnance Corporation. (See Tunks, Charles A., assignor.)
Automatic Electric Company. (See Erickson, John, assignor.)
Automatic Electric Company. (See Jacobsen, Emil, assignor.)
Axe, Roy T., and E. F. Chaffee, assignors to The O. M. Edwards Company Inc., Syracuse, N. Y. Brake for window-sashes. No. 1,348,037; Aug. 10; v. 277; p. 228.
Bahan, George F., and A. St. Onge, Charlotte, N. C. Bobbin-stripper. No. 1,349,448; Aug. 10; v. 277; p. 309.
Bailey, Cyrus, Western Springs, Ill. Plane No. 1,348,923; Aug. 10; v. 277; p. 205.
Bak, Edward, East Stanwood, Wash. Washboiler attachment. No. 1,349,545; Aug. 10; v. 277; p. 328.
Baker, Linnaeus E., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind. Dispensing-faucet. No. 1,348,839; Aug. 10; v. 277; p. 189.
Baker, Newton D., Secretary of War, trustee. (See Martel, F. J. Briggs, Macaulay, Wright, and Wenner, assignors.)
Bakerman, Abraham M., New York, N. Y. Necktie. No. 1,349,486; Aug. 10; v. 277; p. 316.
Bakken, Andrew H., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company. Latching device. No. 1,349,356; Aug. 10; v. 277; p. 291.
Bakken, Andrew H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fuse. No. 1,349,357; Aug. 10; v. 277; p. 291.
Balestrino, Louis, Brooklyn, and G. Merigone, New York, N. Y. Multiple-lever lock for automobiles. No. 1,348,840; Aug. 10; v. 277; p. 189.
Balestrino, Louis, Brooklyn, and G. Merigone, New York, N. Y. Automobile-lock. No. 1,348,841; Aug. 10; v. 277; p. 189.
Baran, Wilfred, *et al.* (See Kollock, Samuel W. M., assignor.)
Barber-Colman Company. (See Colman, Howard D., assignor.)
Barbet, Emile A., Paris, France. Apparatus for regulating and maintaining a desired level of liquid in evaporating installations. No. 1,349,114; Aug. 10; v. 277; p. 242.
Barclay, David, Conneautville, and A. M. Dudley, Oakmont, Pa., assignors to Westinghouse Electric and Manufacturing Company. Shaft-bracing. No. 1,349,358; Aug. 10; v. 277; p. 291.
Barlow, William N., Yonkers, N. Y. Electric relay or circuit-closing device. No. 1,348,842; Aug. 10; v. 277; p. 190.
Barnett, Jacob I., Newton, Mass. Garment. No. 1,349,359; Aug. 10; v. 277; p. 292.
Barrett, Andrew J., Britannia Beach, British Columbia, Canada, assignor of one-half to G. Bergquist, Seattle, Wash. Light-holder. No. 1,349,312; Aug. 10; v. 277; p. 282.
Barrett, Andrew J., Britannia Beach, British Columbia, Canada, assignor of one-half to G. Bergquist, Seattle, Wash. Elevator safety device. No. 1,349,313; Aug. 10; v. 277; p. 283.
Bart, Charles, New York, N. Y. Display-rack canopy. No. 1,349,255; Aug. 10; v. 277; p. 272.
Bartels, Carl. (See Mosler, M., and Bartels.)
Bartlett, Wilbert S. (See Lombard, Levi W., assignor.)
Barton, Kirtland C., National Stock Yards, Ill., assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Controlling mechanism for meal-cookers and the like. No. 1,349,143; Aug. 10; v. 277; p. 248.
Barton, Louis E., Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Obtaining titanic oxid. No. 1,348,843; Aug. 10; v. 277; p. 190.
Baskin, Frank S., Cleveland Heights, Ohio. Table attachment for seats. No. 1,348,924; Aug. 10; v. 277; p. 205.
Bates, August B., Washington, D. C. Drip-catcher for refrigerators. No. 1,349,314; Aug. 10; v. 277; p. 283.
Bates, George E., Syracuse, N. Y. Keyhole-illuminating device. No. 1,349,360; Aug. 10; v. 277; p. 292.

Bauer Brothers Company, The. (See Adelsperger, Dow L., assignor.)
Baumann, John R., Bed Wing, Minn. Segment-block. No. 1,349,552; Aug. 10; v. 277; p. 329.
Baxter, Douglas, assignor of one-half to G. Henderson, Three Rivers, Quebec, Canada. Beehive. No. 1,348,925; Aug. 10; v. 277; p. 206.
Bechtold, Reuben E., assignor to S. F. Bowser & Co., Fort Wayne, Ind. Meter for continuous pumps. No. 1,349,256; Aug. 10; v. 277; p. 272.
Becker, Rudolph, Roselle Park, N. J., assignor to The Singer Manufacturing Company. Thread-controlling mechanism for sewing-machines. No. 1,349,115; Aug. 10; v. 277; p. 243.
Beckton, Dickinson & Co. (See Schwidetzky, Oscar O. R., assignor.)
Beckwith, Harry H. (See Swett, Charles E., assignor.)
Benham, Charles E., Schenectady, N. Y., assignor to The Maqua Company. Printer's furniture. No. 1,349,257; Aug. 10; v. 277; p. 272.
Bennett, Erastus S., New York, N. Y. Turbine-engine. No. 1,349,487; Aug. 10; v. 277; p. 316.
Benton, James, East Palestine, Ohio. Multiple-cup mold. No. 1,349,546; Aug. 10; v. 277; p. 328.
Bergquist, Gust. (See Barrett, Andrew J., assignor.)
Bergstrom, Alfred E., Savage, Mont. Incubator. No. 1,349,315; Aug. 10; v. 277; p. 283.
Berry, Alfred M., Woodhaven, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y. Channel-entrance for typographical machines. No. 1,349,488; Aug. 10; v. 277; p. 317.
Billon, Frederic. (See Schneider, J., Hürlimann, and Billon.)
Billon, Frederic, Solothurn, Switzerland. High-voltage distributer for electric ignition apparatus. No. 1,349,316; Aug. 10; v. 277; p. 283.
Bingley, John W., Watertown, N. Y. Safety train-stop mechanism. No. 1,349,489; Aug. 10; v. 277; p. 317.
Bird Adding Machine Company. (See Fitch, Charles M., assignor.)
Birnstock, William W., assignor to Hench & Dromgold Company, York, Pa. Nozzle-header for bottle-washing machines. No. 1,349,144; Aug. 10; v. 277; p. 249.
Bissell, Carl H., and F. C. Smith, assignors to Crouse-Hinds Company, Syracuse, N. Y. Quick-action switch. No. 1,349,038; Aug. 10; v. 277; p. 228.
Bitter, Arthur A., Los Angeles, Calif., assignor, by mesne assignments, to Western Vulcanizer Manufacturing Company, Chicago, Ill. Vulcanizer. No. 1,349,039; Aug. 10; v. 277; p. 228.
Blake, Archie, New Orleans, La. Nut-lock. No. 1,349,404; Aug. 10; v. 277; p. 300.
Blocksom, Berget H., assignor to Wilson & Co., Inc., Chicago, Ill. Cushion-cover. No. 1,349,258; Aug. 10; v. 277; p. 272.
Bodom, Carl V., Tampico, Mexico. Fastening device for lifeboats. No. 1,349,317; Aug. 10; v. 277; p. 283.
Bolgiano, Charles J., Baltimore, Md. Correspondence-blank. No. 1,349,547; Aug. 10; v. 277; p. 328.
Bone, William A., J. W. Wilson, Leeds, and C. D. McCourt, London, England, assignors, by mesne assignments, to Surface Combustion, Inc., Wilmington, Del. Combustion of fuel. No. 1,349,040; Aug. 10; v. 277; p. 228.
Borders, Harry L., and E. A. Lewis, assignors to Standard Corrugated Box Co., St. Louis, Mo. Hinge for corrugated boxes. No. 1,348,844; Aug. 10; v. 277; p. 190.
Borrowman, George L., New Rochelle, N. Y. Water-softening compound and producing same. No. 1,348,977; Aug. 10; v. 277; p. 216.
Boryk, John, Ansonia, Conn. Noisy toy. No. 1,349,259; Aug. 10; v. 277; p. 272.
Boston, Frank M. (See Walker, Asa C., assignor.)
Bouton, Edgar M., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Furnace-regulator system. No. 1,349,361; Aug. 10; v. 277; p. 292.
Bowser, S. F., & Co. (See Bechtold, Reuben E., assignor.)
Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Curtain-fixture. No. 1,349,041; Aug. 10; v. 277; p. 229.
Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Curtain-rod. No. 1,349,042; Aug. 10; v. 277; p. 229.
Boye, James H., Manufacturing Company. (See Boye, James H., assignor.)
Boye, Lawrence F., Chester, Pa. Clutch mechanism. No. 1,348,926; Aug. 10; v. 277; p. 206.
Boyle, Bernard J. (See Royer, Edwin C., assignor.)
Bradley, Jacob A., Milwaukee, assignor of one-half to Albert O. Anderson, Shawano, Wis. Nut-lock. No. 1,349,260; Aug. 10; v. 277; p. 272.
Breckenridge, Harold C., Musselshell, Mont. Railway electric lantern. No. 1,349,548; Aug. 10; v. 277; p. 329.
Breinl, Joseph C., Prague, Czechoslovakia. Valve. No. 1,349,145; Aug. 10; v. 277; p. 249.
Breniser, Orson W., assignor of one-fifth to A. V. Groupe, Philadelphia, Pa. Cable-support. No. 1,349,043; Aug. 10; v. 277; p. 229.
Brensinger, Julius, Fairfield, assignor to The Max Ams Machine Co., Bridgeport, Conn. Can-body-side-seam-soldering-machine. No. 1,349,044; Aug. 10; v. 277; p. 229.
Briggs, Clark A. (See Martel, F. J., Briggs, Macaulay, Wright, and Wenner.)
Brooks, Herbert, assignor to Petters Limited, Yeovil, England. Means for controlling the supply of liquid fuel to internal-combustion engines. No. 1,348,845; Aug. 10; v. 277; p. 190.
Broomhead, Henry H., Bloomington, Idaho. Lock for automobile steering-gear. No. 1,349,490; Aug. 10; v. 277; p. 317.
Brown, Carl S., and R. R. Shaffer, Ashland, Ohio. Light-deflector. No. 1,348,927; Aug. 10; v. 277; p. 206.
Brown, Clarence M., Philadelphia, Pa., assignor to Pittsburgh Plate Glass Company. Cleaning-brush. No. 1,349,261; Aug. 10; v. 277; p. 273.
Brown, Clarence M., Philadelphia, Pa., assignor to Pittsburgh Plate Glass Company. Brush for cleaning glass-making pots. No. 1,349,262; Aug. 10; v. 277; p. 273.
Brown, Gouverneur G., New York, and P. A. Schuchart, Rockville Center, N. Y., assignors to Paper Service Company. Sheet-interfolding machine. No. 1,348,846; Aug. 10; v. 277; p. 190.
Brown, John D. (See O'Neill, Arthur M., assignor.)
Brown, Thomas R., Sparkill, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electric train-wire coupling. No. 1,349,405; Aug. 10; v. 277; p. 301.
Browning, William H., New York, N. Y. Edge-trimmer. No. 1,348,847; Aug. 10; v. 277; p. 191.
Bruce, Thomas D. (See Woodruff, George N., assignor.)
Bryant, George W. (See Heale, F., and Bryant.)
Bryson, Thomas J., New Orleans, La. Traction-lug for vehicles. No. 1,349,406; Aug. 10; v. 277; p. 301.
Buch, Max, Birmingham, England, assignor, by mesne assignments, to Edwards Corporation, Jackson, Mich. Cape cart-hood for use on motor-vehicles. No. 1,349,045; Aug. 10; v. 277; p. 229.
Buchenau, Lloyd W., Stockton, Calif. Gum and mint case. No. 1,349,263; Aug. 10; v. 277; p. 273.
Buck, David V. (See Garman, H. B., and Buck.)
Buckwalter, Leon G. (See Hutchinson, Morton C., assignor.)
Bukovecz, Miguel, Mexico, Mexico. Instantaneous safety-switch. No. 1,349,184; Aug. 10; v. 277; p. 257.
Burgess, C. F., Laboratories. (See Weiss, Howard F., assignor.)
Burton, George W., Providence, R. I. Locking device. No. 1,349,491; Aug. 10; v. 277; p. 317.
Burton, Thomas L., assignor to The American Brake Company, St. Louis, Mo. Brake-head adjuster. No. 1,349,407; Aug. 10; v. 277; p. 301.
Busch-Sulzer Bros.-Diesel Engine Company. (See Pfeffer, Oscar W., assignor.)
Busse, Fred W., Louisville, Ill. Eaves-trough or gutter-cover. No. 1,349,264; Aug. 10; v. 277; p. 273.
Butler, Robert T., and H. E. Thompson, Flushing, Ohio. Switch-stand. No. 1,348,848. Aug. 10; v. 277; p. 191.
Cahill, Phillip J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J. Dredge-tumbler. No. 1,349,408; Aug. 10; v. 277; p. 301.
Cameron, William J. Chicago, Ill. Filling lamps. No. 1,348,978; Aug. 10; v. 277; p. 216.
Camp, William W., Stratford, Ontario, Canada. Press. No. 1,349,318; Aug. 10; v. 277; p. 283.
Campbell, Patrick G., Monolith, Calif. Agitating device. No. 1,349,492; Aug. 10; v. 277; p. 318.
Candee, L., & Company. (See Rice, J. M., Joseph, and Rupp, assignors.)
Canfield, Arthur J., Montreal, Quebec, Canada. Making draft-gear yokes. No. 1,349,493; Aug. 10; v. 277; p. 318.
Caproni, Gianni, Milan, Italy. Multiplane aeroplane. No. 1,349,116; Aug. 10; v. 277; p. 243.
Caron, Martinus H. (See Clevenger, G. H., and Caron.)
Carpenter, Charles E., Postville, Iowa. Kiln. No. 1,349,185; Aug. 10; v. 277; p. 257.
Carrey, John O., assignor to Carrey Rotary Engine Company, St. Louis, Mo. Burner. No. 1,349,319; Aug. 10; v. 277; p. 284.
Carrey Rotary Engine Company. (See Carrey, John O., assignor.)
Carson, Helen S., Stamford, Conn. Thread-cutter. No. 1,349,320; Aug. 10; v. 277; p. 284.
Carter, James W., Jr., Abilene, Tex. Indicator. No. 1,349,321; Aug. 10; v. 277; p. 284.
Cates, Leland C., assignor to Sunbeam Chemical Company, Chicago, Ill. Alkali-proof dye and producing same. No. 1,349,265; Aug. 10; v. 277; p. 273.
Chaffee, Edward F. (See Axe, R. T., and Chaffee.)
Chaffee, Edward F., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y. Sash-lock for railway-car windows. No. 1,349,046; Aug. 10; v. 277; p. 229.
Chaffee, Herbert H., San Leandro, Calif. Oven. No. 1,349,494; Aug. 10; v. 277; p. 318.
Chapman, Leonora, Ariel, Pa. Ventilator. No. 1,349,186; Aug. 10; v. 277; p. 257.
Chapman, Mark C. (See Chapman, Matthew T. and M. C.)
Chapman, Matthew T. and M. C., assignors to The American Well Works, Aurora, Ill. Deep-well pump. No. 1,348,980; Aug. 10; v. 277; p. 216.
Chicago Bearings Company. (See Winn, Charles A., assignor.)
Chicago Line-Tabler Company. (See Stevenson, Ashton G., assignor.)

Chicago Manufacturing and Distributing Co. (See Suitemeyer, Charles F., assignor.)
Christensen Machine Company. (See Christensen, Martin, assignor.)
Christensen, Martin, assignor to Christensen Machine Company, Racine, Wis. Conveyer for book-stitching machines. No. 1,348,849; Aug. 10; v. 277; p. 191.
Christensen, Martin, assignor to Christensen Machine Co., Racine, Wis. Signature-stitching machine. No. 1,348,850; Aug. 10; v. 277; p. 191.
Christmas, Adolph F., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Governing mechanism for internal-combustion engines. No. 1,349,146; Aug. 10; v. 277; p. 249.
Chubb, Lewis W., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrical precipitating system. No. 1,349,362; Aug. 10; v. 277; p. 292.
Clark, Ezra E., Newton, Mass. Dry-pipe valve. No. 1,348,981; Aug. 10; v. 277; p. 216.
Clevenger, Galen H., Colorado Springs, Colo., and M. H. Caron, Weltevreden, Java, Dutch East Indies, assignors to Research Corporation of New York, N. Y. Treating oxid ores of manganese. No. 1,349,322; Aug. 10; v. 277; p. 284.
Clucker, Albert S., New York, N. Y. Vehicle-bumper. No. 1,349,117; Aug. 10; v. 277; p. 243.
Coates, Ray G., Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa. Collapsible core-bar. No. 1,348,982; Aug. 10; v. 277; p. 217.
Cocks, John H., Morenci, Ariz. Support for hammer-machine drills. No. 1,349,047; Aug. 10; v. 277; p. 230.
Cogburn, Robert H., McKinney, Tex. Cotton-chopper. No. 1,349,266; Aug. 10; v. 277; p. 273.
Colby, Ora A., Larimer, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system for electric furnaces. No. 1,349,363; Aug. 10; v. 277; p. 292.
Collins, Allison B., Denver, Colo. Shade-roller-operating mechanism. No. 1,348,928; Aug. 10; v. 277; p. 206.
Colman, Howard D., assignor to Barber-Colman Company, Rockford, Ill. Knotter. No. 1,348,929; Aug. 10; v. 277; p. 207.
Conill, Fernan, New York, N. Y. Massage implement. No. 1,349,495; Aug. 10; v. 277; p. 318.

Ziegler, Guy, Lincoln, Nebr. Storage batteries of the lead-acid type, &c. No. 131,849; Aug. 10; v. 277; p. 373.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF AUGUST, 1920.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Accounting and typewriting machines, Sheet-feeding means for. S. S. Dixon. No. 1,348,984; Aug. 10; v. 277; p. 217.

Acid, Manufacture of concentrated nitric. P. A. Guye. No. 1,348,873; Aug. 10; v. 277; p. 196.

Adding-machine. C. M. Fitch. No. 1,349,194; Aug. 10; v. 277; p. 259.

Adjustable gate, Vertically-. O. Veeder. No. 1,349,173; Aug. 10; v. 277; p. 254.

Advertising-bench, Automatic. G. G. Diaz. No. 1,348,852; Aug. 10; v. 277; p. 191.

Advertising-display device. F. W. Sargent. No. 1,348,899; Aug. 10; v. 277; p. 200.

Aeronautical apparatus. C. C. Haddock. No. 1,349,336; Aug. 10; v. 277; p. 287.

Aeroplane. I. Covino. No. 1,348,983; Aug. 10; v. 277; p. 217.

Aeroplane. J. Ebert. No. 1,348,934; Aug. 10; v. 277; p. 207.

Aeroplane. G. N. Kasematis and B. A. Stamatelopoulos. No. 1,349,460; Aug. 10; v. 277; p. 311.

Aeroplane construction. H. G. Hooper. No. 1,348,996; Aug. 10; v. 277; p. 219.

Aeroplane-fuselage. G. Niedbala. No. 1,349,526; Aug. 10; v. 277; p. 325.

Aeroplane, Military. O. A. Ross. No. 1,349,105; Aug. 10; v. 277; p. 241.

Aeroplane, Multiple. G. Caproni. No. 1,349,116; Aug. 10; v. 277; p. 243.

Aeroplanes, Landing device for. A. C. Warren. No. 1,349,242; Aug. 10; v. 277; p. 268.

Agitating device. P. G. Campbell. No. 1,349,492; Aug. 10; v. 277; p. 318.

Air-brush. B. E. Holton. No. 1,349,154; Aug. 10; v. 277; p. 251.

Air-heating attachment. G. D. Kennedy. No. 1,349,461; Aug. 10; v. 277; p. 311.

Air power-drive, Compressed-. G. C. Alstad. No. 1,349,036; Aug. 10; v. 277; p. 227.

Air-supplying-valve attachment. M. C. Kirkpatrick. No. 1,349,210; Aug. 10; v. 277; p. 262.

Alarm: *See*—
Fire-alarm.

Alkaline deposits, Recovering constituents of value from natural. C. Sundstrom. No. 1,349,445; Aug. 10; v. 277; p. 308.

Ammonia contents of coal-gas, Process of and apparatus for recovering the. B. Torrey, Jr. No. 1,349,393; Aug. 10; v. 277; p. 298.

Anatomical developing and adjusting machine. D. W. Riesland. No. 1,348,896; Aug. 10; v. 277; p. 200.

Anhydrid, Manufacture of nitric. P. A. Guye. No. 1,348,874; Aug. 10; v. 277; p. 196.

Appliance. P. Crowder. No. 1,349,368; Aug. 10; v. 277; p. 294.

Arch-support. J. L. Zink. No. 1,349,355; Aug. 10; v. 277; p. 291.

Article-holder, Folding. A. Wiggers. No. 1,349,402; Aug. 10; v. 277; p. 300.

Artillery, Automatic fuse-setter for anti-aircraft. R. V. Morse. No. 1,349,220; Aug. 10; v. 277; p. 264.

Ash-conveyer. A. Girtanner. No. 1,348,937; Aug. 10; v. 277; p. 206.

Auto-jack. W. M. Cook. No. 1,348,851; Aug. 10; v. 277; p. 191.

Auto-signal. E. Ortman. No. 1,349,092; Aug. 10; v. 277; p. 238.

Automatic coupling. W. V. Phillips. No. 1,349,433; Aug. 10; v. 277; p. 306.

Automobile-lock. L. Balestrino and G. Merigone. No. 1,348,841; Aug. 10; v. 277; p. 189.

Automobile-lock. C. W. Nixon. No. 1,348,891; Aug. 10; v. 277; p. 199.

Automobile multiple-lever lock. L. Balestrino and G. Merigone. No. 1,348,840; Aug. 10; v. 277; p. 189.

Automobile-power-transmission device. H. H. Marshall, Jr. No. 1,349,428; Aug. 10; v. 277; p. 305.

Automobile-signal. N. Y. Gordon. No. 1,349,063; Aug. 10; v. 277; p. 233.

Automobile-signal. C. Millar. No. 1,349,289; Aug. 10; v. 277; p. 278.

Automobile-starter. D. Jokubaitis. No. 1,349,207; Aug. 10; v. 277; p. 261.

Automobile-timer. L. E. Middlebrook. No. 1,349,523; Aug. 10; v. 277; p. 324.

Automobiles, Pneumatic transmission for. W. C. Kress. No. 1,349,161; Aug. 10; v. 277; p. 252.

Automobiles, Steering-adjuster for. D. Moulder. No. 1,349,469; Aug. 10; v. 277; p. 313.

Automobiles, Traction attachment for. J. O. Mook. No. 1,349,083; Aug. 10; v. 277; p. 236.

Awning-fastener. A. C. Ross. No. 1,349,532; Aug. 10; v. 277; p. 326.

Ax. J. H. Young. No. 1,348,920; Aug. 10; v. 277; p. 205.

Backwater stop or valve. L. P. Hahn and O. L. Miller. No. 1,348,993; Aug. 10; v. 277; p. 219.

Ball-and-socket joint. J. W. Lakin. No. 1,349,002; Aug. 10; v. 277; p. 220.

Ball-joint, Water and pressure tight. F. Gall and G. Stolle. No. 1,349,060; Aug. 10; v. 277; p. 232.

Banjo-heads, Coöperating means for. L. L. Kenyon. No. 1,349,067; Aug. 10; v. 277; p. 234.

Bar: *See*—
Core-bar. Pressure-bar.

Basket. G. L. O'Dell. No. 1,349,431; Aug. 10; v. 277; p. 306.

Battery: *See*—
Dry battery.

Batteries, Automatic water-feed for storage. J. D. Sartakoff. No. 1,349,297; Aug. 10; v. 277; p. 280.

Batteries, Lifting-handle for storage. E. A. Hurd. No. 1,349,457; Aug. 10; v. 277; p. 310.

Bearing-box. H. C. Foster. No. 1,349,449; Aug. 10; v. 277; p. 309.

Bearing-lubricating device. K. E. Lyman. No. 1,349,076; Aug. 10; v. 277; p. 235.

Bearing, Roller-. C. A. Winn. No. 1,349,307; Aug. 10; v. 277; p. 281.

Bearing, Thrust-. A. Kingsbury. No. 1,349,157; Aug. 10; v. 277; p. 251.

Bed, Auto spring-. W. E. Cummings. No. 1,349,268; Aug. 10; v. 277; p. 274.

Bed, Davenport-. J. Kronheim. No. 1,349,162; Aug. 10; v. 277; p. 252.

Bed, Foldable. E. E. Hartman. No. 1,348,944; Aug. 10; v. 277; p. 209.

Bed-table combined with cupboards or like receptacles. A. Trotter. No. 1,349,023; Aug. 10; v. 277; p. 225.

Bedstead. J. McAllan. No. 1,349,287; Aug. 10; v. 277; p. 277.

Beehive. D. Baxter. No. 1,348,925; Aug. 10; v. 277; p. 206.

Bell-ringing mechanism. H. A. Wende. No. 1,349,400; Aug. 10; v. 277; p. 300.

Belt-tightener, Automatic. H. J. Smith. No. 1,348,905; Aug. 10; v. 277; p. 202.

Bench: *See*—
Advertising-bench.

Blank, Correspondence-. C. J. Bolgiano. No. 1,349,547; Aug. 10; v. 277; p. 328.

Blending-machine. H. P. Fleming. No. 1,349,505; Aug. 10; v. 277; p. 320.

Block: *See*—
Segment-block.

Board: *See*—
Game-board. Violin finger-board.
Plaster-board.

Boats, Fastening device for life-. C. V. Bodom. No. 1,349,317; Aug. 10; v. 277; p. 283.

Bobbin-stripper. G. F. Bahan and A. St. Onge. No. 1,349,448; Aug. 10; v. 277; p. 309.

Boiler-closure for hand-holes. H. A. Jochumsen. No. 1,349,510; Aug. 10; v. 277; p. 321.

Bolt: *See*—
Expansion-bolt. Securing-bolt.

Borax from solutions containing sodium borates, Recovering. C. Sundstrom. No. 1,349,446; Aug. 10; v. 277; p. 309.

Bottle-capping machine. E. E. Phillips. No. 1,349,007; Aug. 10; v. 277; p. 239.

Bottles, Combined cover and closure-remover for. E. F. Kandlbinder. No. 1,349,511; Aug. 10; v. 277; p. 321.

Windshields, Automobile-. Powell-McLean Specialty Co. No. 122,496; Aug. 10; v. 277; p. 356.
Windshield cleaners, Automobile-. L. D'Eyraud. No. 127,904; Aug. 10; v. 277; p. 361.
Yarn, Hand-knitting. Wool Novelty Co. No. 129,436; Aug. 10; v. 277; p. 365.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 10, 1920.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 7: 1,348,850
2— 32: 1,349,472
42: 1,349,029
83: 1,349,187
1,349,486
94: 1,349,359
106: 1,349,206
117: 1,348,950
5— 3: 1,349,540
5: 1,348,944
13: 1,349,258
15: 1,349,072
39: 1,349,287
43: 1,349,073
48: 1,349,102
72: 1,349,268
6— 2: 1,348,925
8— 6: 1,349,265
19: 1,348,974
9— 22: 1,349,317
10— 44: 1,348,864
12— 2: 1,349,192
27: 1,349,239
38: 1,349,301
132: 1,349,333
142: 1,348,941
1,349,296
13— 17: 1,349,179
19: 1,349,142
15— 37: 1,349,261
1,349,262
50: 1,349,517
59: 1,349,118
72: 1,349,067
16— 76: 1,349,088
